DIRECTING COMMITTEE

DR. HENRY B. COLLINS, Smithsonian Institution, Chairman.

DR. BURTON W. ADKINSON, Director, Reference Department,
Library of Congress.

MR. ROBERT C. GOOCH, Director of Administration, Library
of Congress.

Representative, Department of the Army.

Representative, Department of the Air Force.

Representative, Office of Naval Research, Department of the Navy.

DR. A. L. WASHBURN, Dartmouth College, Hanover, N. H.

COL. WALTER A. WOOD, Arctic Institute of North America, New
York, N. Y.

FOREWORD

Volume 5 of *Arctic Bibliography*, like Volumes 1 to 4, has been prepared for the Department of Defense by the Arctic Institute of North America. The work has been carried out under the direction of Miss Marie Tremaine, who has continued to serve as Editor and Director of the Bibliography project. As in the preceding fiscal year, the work has been supported by the Arctic Aeromedical Laboratory, Alaskan Air Command, U. S. A. F., through a contract with the Office of Naval Research. Funds for printing the present volume have been provided by the Directorate of Research and Development, Department of the Air Force.

This volume of *Arctic Bibliography* lists and describes the contents of 5,494 publications, numbered from 27,632 through 33,125; the entries are numbered consecutively, beginning with Volume 1. The subject-geographic index contains over 20,000 entries. A special effort has been made to cover material published from 1950 through 1953, but older works are also included. Subjects that have been emphasized in the present volume include health and disease, physiological effects of low temperature, and anthropology, particularly the native peoples of northern Eurasia. A check of language coverage shows that forty percent of the publications analyzed in the present volume are in English, thirty percent in Russian, thirteen percent in German, seven percent in Scandinavian and Finnish, five percent in French, and the remaining five percent in Italian, Latin, Polish, Dutch, Japanese, Hungarian, and Spanish.

The Library of Congress, in making working space and facilities available to the Bibliography staff, has contributed greatly to the success of the work. Dr. Burton W. Adkinson and Mr. Robert

C. Gooch, Directors, respectively, of the Library's Reference and Administration Departments, have continued to represent the Library on the Directing Committee and have been helpful in many ways. The Directing Committee and Arctic Institute are also grateful to Lt. Col. Andres I. Karstens of the Arctic Aero-medical Laboratory, Dr. A. H. Lawton and Mr. George Grimminger, from Headquarters, U. S. A. F., Dr. Paul Siple, Department of the Army, and Dr. S. R. Galler, Office of Naval Research, whose continued interest and support have made possible the production and publication of this fifth volume of *Arctic Bibliography*.

Henry B. Collins
Chairman, Directing Committee
Arctic Bibliography

INTRODUCTION

Knowledge of conditions for successful acclimatization of man, domestic animals, and plants, as well as their continuous health, is the main prerequisite of settlement of the Arctic, an adequate utilization of its vast resources, and its defense. Hence, almost half the content of the present volume of *Arctic Bibliography* is devoted to problems of health and environmental adaptation in cold climate, and to the life of peoples native to arctic regions. Classics such as James Cook's report on scurvy from his voyage of 1772-75, accounts on the effects of cold in two World Wars, recent field and laboratory studies, are listed and briefly summarized. The papers are in the language of their title, though our summary is in English. They are indexed under such terms as Environmental effects, Frostbite, Hypothermia, Trench foot, Disease, Hygiene, Medicine, Clothing, Diet and nutrition, Anatomy, Body systems, Physiology, etc. About a thousand works by travelers and scientists on northern Eurasian aborigines are also included in this volume. The content of some, less accessible by reason of language or paucity of copies, are described in rather more than usual detail. They are indexed under the name of the people concerned: Chukchis, Samoyeds, etc., all of whom are indicated under the word Anthropology. These peoples are also treated incidentally in works on Public health, Social, and Economic conditions, Kolkhozes and sovkhoses, etc.

This program of stressing the human factor in the North, initiated in volume 4, will be continued into volume 6. Aside from this emphasis, the scope of the present volume and its arrangement are essentially the same as those outlined in the first volume of *Arctic Bibliography*. Among other interesting materials listed and described are some on Sovereignty, some on Insect

control, the notable series *Fauna USSR*, long in preparation under the Academy of Sciences of the U. S. S. R., papers from the Alaskan Science Conference, the Greenland icecap reports from Expéditions polaires françaises, etc.

With the aid of the U. S. Board on Geographic Names, a more precise identification of geographic features is given in the index than was possible in earlier years. Grateful acknowledgement is made again for contributions from the Geological Society of America's *Bibliography and Index of Geology Exclusive of North America*, the American Meteorological Society's *Meteorological Abstract and Bibliography*, and from the Library of Congress' SIPRE Bibliography Project sponsored by the U. S. Army Corps of Engineers' Snow, Ice and Permafrost Research Establishment.

Marie Tremaine

Director, Arctic Bibliography Project

ARCTIC BIBLIOGRAPHY

27632. A., A. *Sindrome dolorosa tardiva da congelamento leggero.* (Minerva medica, Dec. 15, 1940. anno 31, v. 2, n. 50, p. 596) *Title tr.:* Delayed pain syndrome in mild frostbite.

Contains a note on the light cases of frostbite common among the Italian troops in the Alps during the action of June 21-25, 1940; their causes (long exposure to cold, southern origin of personnel, excessive drinking, etc.); clinical aspects; prophylaxis (better footwear and foot hygiene); therapy.

27633. ÅNGSTROM, ANDERS KNUTSON, 1888- . Norrlands klimat. (Ymer, 1942. Årg. 62, häft. 3-4, p. 51-92, tables, graphs, maps) 31 refs. This paper is one of the collection listed as *Arctic Bibliography*, No. 10468. *Title tr.:* Norrland's climate.

Contains a basic climatological study of Norrland (60°-69°N. lat.) made primarily to demonstrate the fundamental significance of the local climate for agriculture, forestry, and various kind of industrial enterprises. The climatic variations within Norrland are considerable due to geographic location and topographic features, similar (if comparable) to those of Switzerland. The main

difference between the central and mountain regions is demonstrated in a precipitation chart. The temperature difference (annual mean values) between Gävle (61°N.) and Karesuando (68°-69°N.) is 7°C., equal to that between Milano (45°-46°N.) and Stockholm (59°-60°N.). Discussion covers such climatic factors as temperature, (including vegetation periods, ice formation and break-up, duration of snow-cover, frost frequency, and sea, lake and watercourse temperatures), precipitation, fog, water supply of rivers, wind, radiation and light. The data are given in tables and graphs. Excellent maps are provided throughout.

27635. ABELSEN, MARIUS. En ung Grønlaenders frimodige betragtninger. (Grønlandske selskab. Årsskrift, 1952, p. 104-110, illus.) *Title tr.:* The frank comments of a young Greenland.

A Greenlandic teacher educated in Denmark comments on the cultural and social relations between Greenlanders and Danes, touching upon matters of health (tuberculosis), education and religion. Greenlanders' native sense of

inferiority will give way to one of equality with Danes, as they acquire knowledge of and gain experience in the Danish way of life. **Copy seen:** DLC.

27636. ÅBERG, BÖRJE. Kärnväxternas höjegränser i Lule Lappmark och i Graubünden, en jämförelse. (Svensk botanisk tidskrift, 1952. Bd. 46, häft. 3-4, p. 286-312) 52 refs. **Title tr.:** The altitudinal limits of vascular plants in Lule Lappmark and in Grisons, a comparison.

"The altitudinal limits of the species common to Lule Lappmark in northernmost Sweden and to Graubünden [i. e. Grisons] in Switzerland have been tabulated, and the two series of extreme values (1, g) have been tested for their correlation. The material was subdivided in different ways and the results are given in table I . . . The monthly means of the air temperature for three pairs of corresponding levels (Gr 2000-LL 649, etc.) are shown in table II."—Summary, p. 309. A list of about 450 vascular plants with altitudinal limits is given, p. 296-309. Summary in English.

27637. ABRAMOV, V. V. Osenñāfā forma kety na Kamchatke. (Akademifā nauk SSSR. Doklady, 1948. nov. seriā, t. 63, no. 1, p. 89-91, illus.) **Title tr.:** The autumn form of the dog-salmon on Kamchatka.

Contains a study of seasonal races of the dog-salmon or keta, *Oncorhynchus keta*, with a table of dimensions of the common keta, its autumn form, the so-called "manok" from Kamchatka rivers, and the same form from the Amur River; followed by discussion of the phenology and life habits of the "manok" found in the rivers of the Kronotskiy Bay region of eastern Kamchatka, and in the Bolshaya and Bannaya Rivers on the western coast of the Peninsula. A new name for this race is proposed: *Oncorhynchus keta* infra-species *manok*.

27638. ABRAMSON, DAVID IRVIN, 1905-, and others. Clinical picture and treatment of the later stage of trench foot. (American heart journal, July 1946. v. 32, p. 52-71, 7 fig., 4 tables) 7 refs. Other authors: D. Lerner, H. B. Shumacker, Jr., and F. K. Hick.

Contains a study of 633 cases of trench foot in soldiers, with special emphasis on the treatment of sequelae and on

reconditioning. Includes information and data on definition of the syndrome, clinical course, kinds of sequelae and their frequency in the group studied; medical and surgical treatment applied (including orthopedic means), and their value; reconditioning and rehabilitation work; follow-up studies, etc.

Copy seen: DLC.

27639. ABRAMSON, HAROLD ALEXANDER, 1899-. Whealing response to light and cold with a note on the mechanism and the origin of the physical allergies. (Psychosomatic medicine, Mar.-Apr. 1948. v. 10, p. 114-17)

Contains a report on two cases, one of them a woman 31 years old, who developed well-formed wheals following swimming in, or washing with cold water, and upon local, experimental application of cold; physical, laboratory and allergy tests were negative; the whealing was traced to a psychic disturbance, caused by anticipated and actual drowning of several friends serving at sea during World War II. After the psychic conflict was resolved the whealing response disappeared. **Copy seen:** DLC.

27640. ABS, OTTO AUGUST HANS, 1891-. "Aus der Polarmedizin." (Polarforschung, 1951. Bd. 3, Heft 2, p. 97-106) 39 refs. **Title tr.:** Polar medicine.

Contains text of a lecture delivered at the 25th anniversary celebration of the Archiv für Polarforschung, Kiel, June 18-20, 1951. Comprehensive, general information on the medical and health problems facing the white man in arctic regions is presented. After introductory remarks on the climate, the following topics are discussed: acclimatization in the subarctic and arctic regions; the effect of the polar night; cold-air respiration; "polar anemia"; psychic effects caused by long darkness, quiet, solitude, absence of women, lack of diversion, social limitations, etc.; hypo-vitaminoses (B, C); hypervitaminosis A; the possible effect of lack of diurnal cycle in the winter; effect of climate on vegetative nervous system; possible effect of "Aran" (a hypothetical component of the air); etc. **Copy seen:** CaMAI.

Contains a study of the general effects, and the effects upon health of the cold climate. Includes information and data on the polar climate: temperature, humidity, illumination, etc.; its effects on the health and main body functions (circulation, blood, respiration, metabolism, etc.); psychic effects; nutrition; the effects of winter darkness; polar climate and the occurrence of diseases; indirect effects on health; hygiene; acclimatization. **Copy seen:** DLC.

27643. ADAMOV, ARKADIĬ. Podvig zemleprokhodtsa. (Vokrug sveta, Oct.

1950, no. 10, p. 56-61, illus., map) **Title tr.:** Heroic feat of an explorer.

A popular account of the Cossack Penda, the first Russian to reach the Lena River (about 1620), based on reports of Gmelin, Müller, and A. P. Okladnikov. **Copy seen:** DLC.

27644. ADAMOV, ARKADIĬ. Pravda o russkikh otkrytiakh v Amerike. (Vokrug sveta, Jan. 1951. no. 1, p. 47-55, ports., illus., maps) **Title tr.:** The truth about Russian discoveries in America.

Contains popular summary of the achievements of Russian explorers in the 18th century, from the voyages of Bering and Chirikov to the expeditions of Sarychev and Golovnin. Comparison is made with George Vancouver's discoveries and priority claimed for the Russians. **Copy seen:** DLC.

27645. ADAMOV, ARKADIĬ. Russkie otkrytiia i issledovaniia v Severnoi Amerike. (Nauka i zhizn', Sept. 1950. t. 17, no. 9, p. 37-41, 3 illus. on plate, map) **Title tr.:** Russian discoveries and explorations in North America.

Popular summary of Russian explorations and activities in Alaska and other parts of northwest America, from the voyage of Semen Dezhnev in 1648 to the trip of Ruf Serebrennikov to Copper River, 1848; with references to Soviet-American relations of today.

Copy seen: DLC.

27646. ADAMOV, ARKADIĬ. Zamechatel'nye russkie puteshestvenniki. (Znanie-sila, Nov.-Dec. 1950. t. 20, no. 11, p. 20-21, no. 12, p. 20-21, illus.) **Title tr.:** Remarkable Russian travelers.

A series of brief sketches (in Russian) of Russian voyages and expeditions, which includes: The first round-the-world voyage (by I. F. Kruzenshtern and I. F. Lisianskii on the *Nadezhda* and *Neva*, 1803-1806), in no. 11, p. 20; Along the rivers of Alaska (L. A. Zagorsk-in's trip along the Yukon, Kuskokwim, etc. in 1842-44), in no. 11, p. 21; Along the arctic coasts of Alaska (A. F. Kashevarov's voyage in 1838 from Bering Strait to Point Barrow), in no. 12, p. 20; The first explorer of Kamchatka (S. P. Krashenninnikov's travels in 1737-1741), in no. 12, p. 21. **Copy seen:** DLC.

27647. ADAMOVA, A. A., and others. Estestvennoe sodержanie nekotorykh mikroelementov v rybakh Barentsova

morfa. (Gigiena i sanitariia, 1949, no. 11 p. 34-38, 3 tables) *Other authors:* A. G. Bosin, M. I. Voskobolnikova, and O. I. Tverdysheva. *Title tr.:* Natural content of some micro-elements in Barents Sea fishes.

Contains an account of chemical analyses of the common edible fish of the Barents Sea for copper, zinc, lead, tin, arsenic and iodine. Head, muscle and liver were analyzed separately and at various seasons of the year.

Copy seen: DSG.

27648. ADAMS, P. J., and J. W. COWIE. A geological reconnaissance of the region around the inner part of Danmarks Fjord, northeast Greenland. København, C. A. Reitzel, 1953. 24 p. illus. 2 fold. plates, text map. (Meddelelser om Grønland. Bd. 111, nr. 7) 39 refs.

A survey of the stratigraphy, structure, and paleontology of an area at the southern end of Kronprins Christians Land, between approx. 80°-81° N. and 22°-27° W., was carried out in July-Aug. 1952 during the Danish East Greenland Expedition. Late Precambrian (?) sandstones, and sandstones, limestones, and dolomites of Ordovician, Silurian, and undetermined age are described, and correlation with other regions is briefly discussed. Strata strike ENE with a gentle eastward regional dip.

Copy seen: DGS.

ADAMS, RAYMOND DELACY, 1911—, see Denny-Brown, D., and others. *Pathol. injury to nerve induced by cold.* 1945. No. 28733.

27649. ADAMS-RAY, JACK. Novocain block of the stellate ganglion. A therapeutic aid in sensory disturbances caused by cold. (Acta chirurgica scandinavica, 1941. v. 85, fasc. 1-3, p. 1-6)

Contains four case histories of first-second degree frostbite with sensation disturbances. Novocain blockade brought about instantaneous and full restitution of sensation in some cases, or a considerable regression and gradual disappearance of the disturbances. The appearance of mydriasis in a couple of cases of blockade of the stellate ganglion is mentioned, and the probable causes of sensation disturbances in frostbite, discussed.

Copy seen: DSG.

27650. ADAMS-RAY, JACK, and C.-J. CLEMEDSON. On first aid, in cases of injury by cold (*refrigeratio*), that can

be rendered by laymen. (Acta chirurgica scandinavica, 1944, v. 89, p. 527-45, 3 tables) 75 refs.

Contains a study dealing with the history of methods of cold treatment (snow, cold baths, etc.) in first aid of frostbite; early dissenters and proponents of quick rewarming; recent progress in the latter method; its agreement with known facts of physiology and pathology of frostbite; authors' investigations with both methods; definite superiority of the quick rewarming technique.

Copy seen: DSG.

27651. ADAMS-RAY, JACK, and B. FALCONER. Pathologico-anatomical changes following rapid and slow thawing respectively, in frozen skin in man; an experimental study. (Acta chirurgica scandinavica, 1951. v. 101, fasc. 4, p. 269-78, 2 illus., 2 tables) 25 refs.

Contains an account of experiments performed on legs of 21 patients, about to be amputated due (except one) to obliterative diseases of the arteries. Following freezing, one area was rapidly warmed in water of +37° C., the other left to spontaneous thawing. Microscopical examinations revealed no differences between the rapidly and slowly thawed areas in three out of the 21 cases; 15 showed greater (mainly degenerative) changes after slow thawing, three more extensive changes after rapid warming.

Copy seen: DSG.

27652. ADAMSON, JAMES DOUGLAS, 1890— and others. Medical survey of Newfoundland. (Canadian Medical Association. Journal, Mar. 1945. v. 52, p. 227-50, 28 fig., 6 tables, chart) 42 refs. *Other authors:* N. Jolliffe, H. D. Kruse, O. H. Lowry, P. E. Moore, B. S. Platt, W. H. Sebrell, J. W. Tice, F. F. Tisdall, R. M. Wilder, and P. C. Zamecnik.

Contains a study of the nutritional status of 868 people in the city of St. John's and several outports including clinical examinations of the whole group and chemical analyses on the body fluids of about half of the subjects. Evidence of nutritional deficiencies due to lack of vitamin A, riboflavin, niacin and ascorbic acid was very frequent, with that of lack of thiamine less frequent. The available food showed a corresponding lack of vitamins but was adequate in calories, protein and fat. Hemoglobin and iron were moderately low, calcium extremely low. Infant

mortality and the death rate from respiratory tuberculosis were high when compared with other groups of the same ancestry. The poor nutritional status is considered in large part responsible for the impaired health and efficiency of the people of Newfoundland.

Copy seen: DSG.

27653. ADARICH, E. P. Fizicheskoe sostoiânie rodivshikhâ v Zapolâr'e za 1941-1948 gg. (Pediatriâ, 1950. no. 2, p. 57-58, table) **Title tr.:** Physical condition of children born in the Arctic in 1941-1948.

Contains data on weight and length (height) of the newborn in the settlement Inta (66°05' N. 59°59' E.) Komi A. S. S. R. during the periods 1941-45 and 1946-48. The good condition is attributed to the government aid to mothers during and after pregnancy, and for the period 1946-48, also to abolishment of rationing and drop in food prices.

Copy seen: DSG.

27654. ADERIKHIN, P. G. Ob uteplenii pochv putem izmeneniâ ikh tsveta. (Meteorologîi i gidrologîi, Aug. 1952. no. 8, p. 28-30, 2 tables) 3 refs. **Title tr.:** Warming of soil by changing its color.

Contains "report on experiments made during 1948-1951 in Murmansk and Moscow provinces, where the comparative observations of air and soil temperatures were carried out for soils in their natural color, and for soils the surface of which was colored in black and white. The most intensive warming up of soil and deeper heat penetration during clear and cloudy days were observed for black soil surfaces. At a height of 50 cm. above the black soil surface on windless days, the air temperature was 3°-5° C. higher than that over the white soil, and 2°-3° C. higher than that over white-gray soil. These differences are increased by low soil moisture." Meteorological abstracts & bibliography, Nov. 1953. v. 4, no. 11, p. 1274.

27655. ADIE, RAYMOND J. Sledge dogs of the Falkland Islands Dependencies Survey, 1947-50. (Polar record, Jan. 1953. v. 6, no. 45, p. 631-41, illus.) 6 refs.

Contains an account on sledge dogs and sledge dog equipment developed by British polar expeditions during the past 20 years and by the Falkland Islands Dependencies Surveys since 1944. The

author was a member of the Survey during 1947-1950, and participated in sledging journeys totalling 4600 miles. The dogs were introduced from Labrador in 1944 and 1945; their progeny, born and bred in the Antarctic, is larger in size and better tempered than the dogs brought from Labrador. The account includes sections on breeding; weaning; kennels and pens; tethering; harnesses; traces; feeding, and training.

27656. *ADLER, BRUNO FRIDRIKHOVICH, 1874- . Karty pervobytnykh narodov. St.-Peterburg, 1910. viii, 350 col., 143 illus., plates, fold. maps. (Obshchestvo lûbitelei estestvoznaniâ, antropologii i étnografii. Izvestiâ, t. 119. Trudy geograficheskago otdeleniâ, vyp. 2) **Title tr.:** Maps of primitive peoples.

Contains a study of map-like drawings made by primitive or half-civilized peoples, also some maps of ancient civilized peoples (Egyptians and others). Local cartographic sketches made by the following northern peoples (among others) are reproduced and discussed: Chukchis, Eskimos, Koryaks, Yukaghirs, Yeniseians, Samoyeds, Yuraks, Dolgans, Tungus, Yakuts, Ostyaks, Gilyaks, Karagas, Soyots, North American Indians, also a Russian peasant of the Turukhansk District. The Siberian materials were collected mostly by the Khatanga Geographical Expedition of 1905, some however by individual investigators, N. L. Gondatti, V. I. Jochelson, and others. Illustrations and explanations of the "maps" are given: what they mean, how they were made (material, instruments, technique, coloring, etc.) and purposes which they served. Extensive indexes of (1) Russian and (2) non-Russian places, individuals, etc., are appended.

Contains a study of the oldest traces of man in Finland and Scandinavia, and their relationship to finds in Russia and the Baltic countries. The finds of Antrea (Finland) which possibly belong to the early Ancyclus time, the arctic Komsa culture (p. 4), the Suomusjärvi culture, that of Maglemose-Kunda, etc., are discussed. Typical artifacts of Finland's early stone age are investigated and their dissemination traced, including occasional finds in Lapland, e. g., axes of the Suomusjärvi type (map 20), slate spear points (map 21), a rounded stone club (Trichterlochkeule, map 30), and a cross-like mattock (kreuzförmige Haue). Some skeletons belonging to the period of comb ceramics, and found in the Olonefs region and in the district of Kalinin (Tver), represent individuals of a Mongoloid Lapp-like stock.

Title tr.: The forms of culture of the Finnish stone age.

Contains a summarizing review of archeological studies in Finland. Three different cultures existed in Finland in the stone age: (1) the paleolithic Komsa culture of typical arctic sea-hunters which extended from Alten Fjord in Norway to Pummanki Fjord near Petsamo; the bearers of this culture probably came by land from the southeast at the end of the glacial period, the shores of the Arctic Ocean being free from the glaciers covering the rest of Scandinavia (map 3); (2) the full neolithic comb ceramic culture of fishers, a northeast European culture, which came via the region around Lake Ladoga, left most of its traces in Karelia, but spread throughout Finland to the Arctic Ocean (map 15), the bearers of the comb ceramic culture supposedly belonged to the Finno-Ugric stock; (3) the central European boat-axe and string ceramic culture of cattle-breeders, obviously of Indo-European origin, who invaded southern and western Finland from Latvia and Estonia by sea,

shortly before 1500 B. C. (map 21). Thus Finland did not have continuously the same population, and in the stone age peoples of three different ethnic origins lived there. **Copy seen:** DLC.

Contains summaries of papers and discussions at a conference in Leningrad of representatives of several educational and government agencies and those of the Samoyed, Tungus, and Ostyak-Vogul national districts. The problem of how better to use the languages of minorities for their cultural-political enlightenment was the topic. The relationship between the literature language and dialects (especially those of the Tungus), Russian influence upon the native languages, the inadequate text books and mistakes in teaching were stressed. One of the "great mistakes" was stated to have been the use of the Latin alphabet in 1931-36. Bourgeois-nationalistic trends among the native groups should be eliminated. A more rapid learning of the Russian language

and culture could be achieved through the help of the native languages.

Institut istorii material'noi kul'tury. Kratkie soobshcheniĭa, 1941. vyp. 9, p. 129-32) *Title tr.:* Sketch of discussions on papers at the meeting on the ethnic origin of the northern peoples, May 28-29, 1940.

Contains report of a meeting in Moscow organized by the section of history and philosophy of the Akademiĭa nauk. Many of the outstanding Russian ethnologists and archeologists read papers and discussed plans for further investigations. Among those participating were Okladnikov, Zolotarev, Cheboksarov, Debeĭs, Prokofiev, Kiselev, and others who work in the North. Among the problems discussed were: the origin of the Tungus, the social organization of Ostyaks and Voguls, the sources of the Asiatic Eskimo culture, the cultural affiliations of the Yakuts, the migration of the Samoyeds, the importance of "ethnonymics" (how peoples call themselves), the Tibetan origin of the Yeniseians, the racial structure of Samoyeds and their relations with Lapps and Eskimos, etc. From the discussion it was apparent that the important factors in northern culture are the winter fishing and hunting in the vast Siberian forests; and that cultural influences from the south (China, Altai and West Siberian

steppes) were of great importance to the formation of northern cultures.

27686. ALASKA. AGRICULTURAL EXPERIMENT STATION. Recommended varieties of field crops for Alaska, 1953-54. Palmer, Alaska, Jan. 1953. 8 p. (*Its:* Circular 14 revised)

The Station conducts field trials at Palmer and College, obtains information on crop performance throughout the Territory, and maintains foundation seed stocks of superior field crop varieties. The Alaskan Certified Seed Growers Association certifies seed of recommended varieties, insuring supply of pure seed adapted to Alaska. Several varieties of three cereals (barley, oats, wheat) and of eight forage crops are listed in order of preference, and described as to: physical characteristics, resistance to disease, best use of crop, origin of variety, and, in some cases, when introduced.

27687. ALASKA. DEPT. OF AGRICULTURE. Growing vegetables in Alaska. Fairbanks, Alaska, May, 1947. 27 p. 3 tables. (*Its:* Circular no. 5) 13 refs.

A handbook for vegetable gardening containing useful information on soil preparation, fertilizers, seeding, thinning, transplanting, cultivation, greenhouses,

pests, harvesting and storing, weed control, and diseases. A chart showing what vegetables may be produced on a plot 35' x 50' is given, with information on varieties, planting time, maturing time, number of rows, depth to plant, yield in pounds, etc. Table of weather data for main Alaskan stations is appended.

Copy seen: DA.

27688. ALASKA. DEPT. OF AGRICULTURE. Livestock in Alaska, including dairy cattle. Fairbanks, Alaska, March 1949. 28 p. illus. text map, table. (*Its:* Circular no. 4, revised and reissued)

The Aleutians, southwest, southeast, south-central, and interior Alaska are considered in turn. Brief history of livestock breeding is given for each area, and physical factors (topography, climate, etc.) and markets are discussed. It is concluded that a good future exists both for beef and dairy cattle.

27689. ALASKA. DEPT. OF HEALTH. Health and first aid guide for home and village. Juneau, Alaska, 1953. 3, 87 p. illus. Text and illus. by Bertha Bloomer Johnson.

Booklet prepared for distribution among natives and whites, through public health nurses, giving simple home remedies for minor ailments and first aid measures for emergencies. Information and suggestions are given on personal, family and community health and hygiene; first aid in accidents, frostbite, colds, rashes and infections, intestinal disorders, body aches, etc., preparation for, and aid at childbirth and care of the newborn; stopping of bleeding; artificial respiration; home nursing; public health aid and services. The booklet is richly and instructively illustrated.

27690. ALASKA. DEVELOPMENT BOARD. Charting Alaska's progress. Washington, D. C., 1953. 48 p. illus. maps, diagrs., graphs. (*Its:* Biennial report, 1951-1952.)

Contains a popular summary of Alaskan economy in 1951-52. Graphs and sta-

tistics with explanatory paragraphs show the status of population, exports, income tax collections, transportation, employment, manufacturing and industrial progress in general, forest industry, mining exploration, building, tourist trade, defense industries, the iron, steel, and aluminum industries, and petroleum exploration.

27692. ALASKA. UNIVERSITY. EXTENSION SERVICE. Sketch of agriculture. College, Alaska, May 1953. 2 p. (*Its:* Circular 902) 3 refs.

Contains brief survey of conditions in the main agricultural regions of Alaska: Matanuska and Tanana valleys, and the Kenai Peninsula. Climate and growing season, crops, and farming possibilities and problems are noted.

Copy seen: DA.

27693. ALASKA. UNIVERSITY. GEO-PHYSICAL INSTITUTE. State of the earth's atmosphere in the Arctic. College, Alaska, 1951. 11 parts. graphs, tables, refs. (*Its:* Contract W28-099-ac-445. Research reports no. 1-10; 12, final report. Aug. 17, 1948-Nov. 15, 1950; Apr. 30, 1951)

"This final report summarizes all of the work done under this contract at College, Alaska, between Feb. 1, 1948 and April 30, 1951 under the direction of Dr. S. L. Seaton and W. S. Wilson. Studies were made of: (1) The inadequacy

of the theory of formation of the E layer by UV ionization; (2) Winds in the ionosphere; (3) Atmospheric ozone at College, Alaska; (4) Searchlight investigations of stratosphere; (5) Temperature of the upper atmosphere; and, finally, (6) Theories of ionization, recombination, diffusion and other properties of the ionosphere. Methods of measurement, development of instruments, records obtained and extensive data tabulations are included and literature reviewed."—*Meteorological abstracts & bibliography*, Oct. 1953. v. 4, no. 10, p. 1204.

27694. ALASKA. UNIVERSITY. GEO-PHYSICAL INSTITUTE. State of the earth's atmosphere in the Arctic. College, Alaska, Aug. 1951. 19 p. tables, diags. (Its: Contract AF19(122)-479, Progress report no. 1)

Pt. 1. Lowrey, R. D., and G. Thirtle. The chemical determination of the amount of ozone in the air at the earth's surface at College, Alaska. Contains a "discussion of the use of thiosulphate as a chemical reagent of ozone, of the inherent indeterminate errors present in this method and of the results of experiments in which the effect of the hydrogen ion concentration, the effect of distilled water and that of a buffer upon the action of the thiosulphate was tested."

Pt. 2. Katzenstein, J. The searchlight technique for exploring the atmosphere. Contains the description of "an attempt to test the validity of the method (developed by the author) of evaluating the signal produced by light scattering from the noise background. Experimental results indicate that the signal due to light scattering is given by the expression $S = \sqrt{S_R^2 - S_N^2}$ where S_R = the total signal received, and S_N = the noise signal, and S = signal due to light scattering alone."

Pt. 3. Katzenstein, J. Ionization chamber. Contains "a description and diagrams of an ionization chamber for correlating total cosmic ray intensity with auroral or geomagnetic activity."—*Meteorological abstracts and bibliography*, Jan. 1953. v. 4, no. 1, p. 19.

Copy seen: DWB.

27695. ALASKA. UNIVERSITY. GEO-PHYSICAL INSTITUTE. State of the earth's atmosphere in the Arctic. College, Alaska, Nov. 1951. 25 p. illus. tables (Its: Contract AF19(122)-479, Second and final report)

Mukerjee, N. R., and W. B. Guenther. The chemical determination of ozone in the air at the earth's surface at College, Alaska. "The thiosulphate and arsenite methods were used determining the average daily values of ozone concentration in the atmosphere. Data are given for ozone concentration, temperature and pressure from Aug. 1 to Oct 31, 1951. The authors consider the arsenite method more reliable."

Bettler, C. The searchlight technique for exploring the atmosphere. "An outline of the theory is given and the apparatus used described. Results for three nights are presented graphically."

Bettler, C., and J. H. Pope. Ionization chamber. "A continuously recording system is described. The apparatus will be tested."—*Meteorological abstracts and bibliography*, Jan. 1953. v. 4, no. 1, p. 19.

27699. ALASKA'S HEALTH. Aid in treatment and hospitalization offered by NFIP to Alaskans suffering effects of recent poliomyelitis. (Alaska's health, Nov.-Dec. 1950. v. 8, no. 11-12, p. 4)

Aid offered by the National Foundation for Infantile Paralysis is discussed. Data are presented on the recent epidemic, with breakdown as to localities, degree of severity, etc. Some information on research, epidemiology and immunity, is offered. **Copy seen:** DSG.

27700. ALASKA'S HEALTH. Alaska receives limited gamma globulin allotment. (Alaska's health, Aug. 1953. v. 10, p. 1, 6)

Contains an announcement of the receipt of gamma globulin for protection of "household contacts"; also information on polio incidence in Alaska during 1952 (a hundred cases) and during the current year (ten cases); the current epidemic in the Yukon Territory; the uses of gamma globulin, etc. **Copy seen:** DSG.

27701. ALASKA'S HEALTH. Alaska's first Chronic Diseases Unit completes

sixth month. (Alaska's health, May-June 1950. v. 8, no. 5-6, p. 1, 3, illus.)

Contains an account of the children's Chronic Diseases Unit at St. Ann's Hospital in Juneau, which is devoted to rheumatic fever and other chronic diseases. Number of patients, kinds and degrees of ailment; special local problems, help of the community, etc., are noted.

Copy seen: DSG.

27702. ALASKA'S HEALTH. Alaska's tuberculosis vaccination work is resumed. (Alaska's health, June 1952. v. 9, p. 5, 8, illus.)

Contains information on the activities of the program since its beginning in 1948; number of tuberculin tests and vaccinations performed; training of nurses in BCG work; outline of field work; cooperation of schools, etc. *Copy seen:* DSG.

27703. ALASKA'S HEALTH. Board of Health adopt revised USPHS Milk Ordinance for Alaska. (Alaska's health, Dec. 1953. v. 10, p. 5)

Contains a note on the new Ordinance adopted in October. Essentially, it is identical with the USPHS ordinance adopted by the Territory in 1937, but modernized and brought up-to-date with Alaska's need. *Copy seen:* DSG.

27704. ALASKA'S HEALTH. Chronic Diseases Unit works at health, hobbies and books. (Alaska's health, Dec. 1951. v. 9, p. 5-6, illus.)

Contains information on the three years' activity of this children's unit; types of patients and care; origin of patients; material aid of the Alaska Crippled Children's Association; future needs. *Copy seen:* DSG.

27705. ALASKA'S HEALTH. Chronic Diseases Unit progresses; shows new need. (Alaska's health, Jan.-Feb. 1950. v. 8, no. 1-2, p. 2)

The Unit offers "observation, complete diagnosis and long-time care as a service to doctors of the Territory for their child patients." Preliminary information on the new program of treatment is presented and the need for a nursing or foster home, stressed. *Copy seen:* DSG.

27706. ALASKA'S HEALTH. Deadly rabies appears again in north country; immunization control of dogs urged for disease prevention. (Alaska's health, June 1952. v. 9, p. 1, 3, illus.)

Contains an account of the first recognition of the disease in Alaska (1881); means of transmission; present outbreak in the Northwest Territories and in the Barrow area (among dogs). Instructions are given on how to handle suspected animals, and how to treat bites; on prevention and eradication of rabies.

Copy seen: DSG.

27707. ALASKA'S HEALTH: Fairbanks begins construction of unique new circulating water system in hope to foil sub-Arctic's freezing effects on mains. (Alaska's health, Oct. 1953. v. 10, p. 5)

Contains a description of the new system in which warm water is circulated and recirculated in the mains, thus avoiding freezing. A new 24 in. drilled well will be the new source of supply; the water, after treatment and disinfection is warmed by condensation water from a steam power plant. The mains will be buried six ft. deep to protect them from seasonal frost, yet keep them above permafrost ground. The system is believed to be the first of its kind in North America. *Copy seen:* DSG.

27708. ALASKA'S HEALTH. For second year, accidents were chief cause of death in Alaska. (Alaska's health, Oct. 1953. v. 10, p. 1)

Contains data on causes of death in 1952 viz: accidents: 20.8 percent of all deaths; heart diseases: 17.2 percent; tuberculosis: 13.6 percent. Conditions in recent years and the considerable drop in death from TB are discussed.

Copy seen: DSG.

27709. ALASKA'S HEALTH. Gamma globulin inoculations given to 2,230 in mass clinics in Juneau area. (Alaska's health, Oct. 1953. v. 10, p. 2, illus.)

Contains an account of mass inoculation given in the Juneau - Douglas area where 12 cases of polio were reported during July 3-24. Children up to the age of 14 and pregnant women were inoculated. The procedure applied, and the cooperation of public and private organizations, the press, radio, etc., are reported. *Copy seen:* DSG.

27710. ALASKA'S HEALTH. Health and first aid manual made especially for Alaskans far from doctors and hospitals. (Alaska's health, Apr. 1953. v. 10, p. 4)

Contains a review of a mimeographed illustrated booklet, *Health and first aid guide for home and village*, pub. by the

Alaska Dept. of Health, q. v., Mar. 1953. It is designed to meet "health and accident problems most likely to occur". Bertha Bloomer Johnson is author and illustrator. *Copy seen:* DSG.

27711. ALASKA'S HEALTH. Health team reports results of investigations and laboratory studies made of intestinal disease outbreak occurring at Unalaska in October. Based on reports by Dr. Wendell C. Matthews, Frank P. Pauls, bacteriologist, and Lauris Parker, sanitarian, all of the Alaska Department of Health. (Alaska's health, Mar.-Apr. 1950. v. 8, no. 3-4, p. 5-6, illus.)

Contains information on the location, population, and lack of sanitation of Unalaska; frequent outbreaks of intestinal disorders; some case histories; beginning of water chlorination; delousing in school; bacterial agents responsible for the outbreak, etc.

Copy seen: DSG.

27712. ALASKA'S HEALTH. Hope is primed on Congress for approval of appropriation for erection of Arctic Institute of Health at Alaska University; scientists see need of research center to expedite studies and aid in correlation of data on healthful living in low temperature zones. (Alaska's health, Mar.-Apr. 1950. v. 8, no. 3-4, p. 1-2)

Stresses need for a center for studying "arctic conditions and their influence on the health and lives of residents," and for coordinating arctic research. The resolution of the University of Alaska, offering a site for an arctic institute is discussed as well as pressing problems requiring solutions; the beginning of Public Health Service in Alaska, and community health measures to be developed (water supply, sewerage, insect control, control of helminths, etc.).

Copy seen: DSG.

27713. ALASKA'S HEALTH. Influenza A-prime re-occurs in Alaska. (Alaska's health, Apr. 1953. v. 10, p. 1)

Contains a note on an outbreak in "many parts of the Territory" which began in January, with cases occurring in the remote areas late in February. In laboratory tests, the type was identified as A-prime.

Copy seen: DSG.

27714. ALASKA'S HEALTH. Itinerant and village nurses have new, compact, insulated "portable clinics." (Alaska's health, Oct. 1951. v. 9, p. 5, illus.)

A newly introduced, insulated, water-tight bag for nurses is described. It contains all the routine nursing supplies plus special equipment for maternity and emergency work (hemoglobin and urine-testing kits, stethoscope, blood pressure apparatus, delivery equipment, etc.) The bag weighs 11 lbs. and can be carried on the shoulders.

Copy seen: DSG.

27715. ALASKA'S HEALTH. Juneau Health Center now has room enough for all its varied activities; fine new city hall provides efficient space for center. (Alaska's health, Aug. 1953. v. 10, p. 3-4, illus.)

Following a description of the new home of the Center, including clinic, waiting-room, class-room etc., an outline of its activities is presented. These comprise various clinics (immunization, chest, eyes, etc.) classes; conferences; home visits to TB patients; health surveys, etc. Volunteer services of various organizations and individuals are also discussed.

Copy seen: DSG.

27716. ALASKA'S HEALTH. Latest TB report shows 5,279 cases in Alaska; brings ratio to 1 in 20. (Alaska's health, Mar.-Apr. 1950. v. 8, no. 3-4, p. 1, 6)

Contains information and data on the increase in tuberculosis during Jan. 1950; numbers of hospitalized, non-hospitalized, arrested and suspected cases; deaths; organization of TB register, etc.

Copy seen: DSG.

27717. ALASKA'S HEALTH. "Long hard winter" takes toll of Alaska's water systems: sources turn to ice, pipes burst, bath tubs are deserted. (Alaska's health, Mar.-Apr. 1950. v. 8, no. 3-4, p. 2, table)

Contains a general account of the damage done and preventive measures to be taken to avoid repetition. Also figures on the depth of seasonal frozen ground in 22 localities.

Copy seen: DSG.

27718. ALASKA'S HEALTH. Medical team braves weather to conduct 30 clinics for crippled children in Interior. (Alaska's health, Apr. 1952. v. 9, p. 3, 7, illus.)

Contains a report of Alaska Dept. of Health teams' work during Nov.-Dec. in the little communities of Bristol Bay, Kuskokwim and Yukon Rivers; with a

breakdown of the more than 300 cases seen; account of organization of clinics, special cases, etc. **Copy seen:** DSG.

27719. ALASKA'S HEALTH. Nature's spring cleaning affects water supplies; bacteria count goes up as break-up time comes. (Alaska's health, Apr. 1952. v. 9, p. 1-2, illus.)

Contains information on spring thawing and epidemics of gastro-intestinal diseases; incidence and symptoms of latter; conditions of water supply; recommendations for individual purification (boiling, treatment with chlorine preparations, or with iodine). **Copy seen:** DSG.

27720. ALASKA'S HEALTH. New health rule bans commercially feeding raw garbage to hogs. (Alaska's health, Feb. 1953. v. 10, p. 3)

"Garbage fed to swine by new commercial ventures in Alaska must be adequately cooked" according to the new policy of the Board of Health; also "all existing commercial feeding ventures in the Territory are required to make necessary provision within three years for cooking of all garbage used as hog food." The measures were adopted to prevent, among other things, the spread of trichinosis. **Copy seen:** DSG.

27721. ALASKA'S HEALTH. New school health record cards ready for pupils. (Alaska's health, Oct. 1953. v. 10, p. 1, illus.)

A new, uniform health card is now for the first time available to schools. Planned by the Depts. of Education, and of Health, they conform with those used in the continental United States. Their usefulness for both health and educational reasons, design, etc., are discussed. **Copy seen:** DSG.

27722. ALASKA'S HEALTH. New typhoid fever case is reported. (Alaska's health, Apr. 1952. v. 9, p. 5)

Contains a report of a new case in January, the fourth in the Bristol Bay area since the previous summer. Earlier outbreaks in the area occurred in 1936 and 1942. Insanitary water supply and uncleanness are blamed for the outbreak. **Copy seen:** DSG.

27723. ALASKA'S HEALTH. Nursing services strive to meet health needs. (Alaska's health, Oct. 1951. v. 9, p. 4, illus.)

Contains an outline of the nurse services of the Health Dept.; share of

the communities in this service (housing, participation in salaries or equipment); organization of health centers, and health programs; growth of nursing services; training of nurses, etc.

Copy seen: DSG.

27724. ALASKA'S HEALTH. Plan to incorporate mental health section in Alaska Health Department program but expect to begin work slowly and lay foundations carefully; much of first work to be coordination of material already on hand. (Alaska's health, July-Aug. 1950. v. 8, no. 7-8, p. 4)

The plan, to be realized in the current year, calls for a psychiatrist, a clinical psychologist and a social worker; a 350-bed mental hospital is recommended; the present sordid conditions, with the mentally sick often placed in unsanitary prisons, are deplored.

Copy seen: DSG.

27725. ALASKA'S HEALTH. Psychiatrist and staff begin work in mental health. (Alaska's health, Oct. 1952. v. 9, p. 2)

Contains a note on the addition of a psychiatric team to the Alaskan Dept. of Health, consisting of a psychiatrist, psychologist and social worker; also the abolishment of the legal practice of treating the mentally deranged as criminal offenders. **Copy seen:** DSG.

27726. ALASKA'S HEALTH. Railroad health unit takes service to many. (Alaska's health, Jan.-Feb. 1950. v. 8, no. 1-2, p. 2)

This two-car unit started operations in Nov. 1949, and is to serve the communities along the rail belt, then transfer its activities to the Yukon River. It is in charge of Dr. Roger Witzel and includes a dentist, x-ray technician, nurse, etc. Some preliminary data on the activities of this mobile clinic, are presented. **Copy seen:** DSG.

27727. ALASKA'S HEALTH. Representatives of American Cancer Society Alaska Division throughout Territory may be asked about cancer information. (Alaska's health, Dec. 1953. v. 10, p. 2, illus.)

Contains information on headquarters, organization and membership of the Alaska Division; fund-raising campaign; aid to patients for radium or x-ray treatment, medicines, etc.

Copy seen: DSG.

27728. ALASKA'S HEALTH. Review first six years aboard M. S. *Hygiene*, Health Department's pioneer 'floating health center.' (Alaska's health, Oct. 1951. v. 9, p. 6-7, illus.)

Contains account of the beginnings, early staff and work of this first "floating health center" of Alaska; organization; contact with settlements; life aboard and experiences at sea; scope of work (medical, dental, immunization, indoctrination, etc.), developing the "family system" of medical approach and care; volunteer aid; areas covered, etc.

Copy seen: DSG.

27729. ALASKA'S HEALTH. Safe wells need careful plans. (Alaska's health, Aug. 1951. v. 9, p. 7, illus.)

Contains illustrated instructions regarding the proper location for wells in relation to sewage disposal installations; also a detailed plan of a well, with suggestions how to make it safe for arctic conditions.

Copy seen: DSG.

27730. ALASKA'S HEALTH. Sanitarium dentist says care of teeth is important part of TB treatment. (Alaska's health, Oct. 1953. v. 10, p. 4, illus.)

Contains information on the relation between (diseased) teeth and tuberculosis; dental care of the TB patients of Seward Sanitarium; special dental techniques required in TB cases, etc.

Copy seen: DSG.

27731. ALASKA'S HEALTH. Spring signals mobile units to summer operations. (Alaska's health, May-June 1950. v. 8, no. 5-6, p. 2)

Contains an account of five mobile health units, their prospective areas of operation and schedules. These units are: *M/V Health*; *Railroad Health*; and *M/S Hygiene*. General aims of the work, methods of operation, some data on health conditions in isolated places visited, common diseases, etc., are discussed.

Copy seen: DSG.

27732. ALASKA'S HEALTH. Territorial Legislature enacts health measures. (Alaska's health, June 1953. v. 10, p. 4)

Contains a list of bills relating to health and to activities of the Health Dept. passed by the 21st session of the Alaskan Legislature. Included are provisions regarding donations of eyes; establishment and operation of hospitals by cities; physical examination of school children; assistance for hospital con-

struction; vital statistics; premarital physical examination, etc.

Copy seen: DSG.

27733. ALASKA'S HEALTH. Tuberculin testing of school children is begun in Juneau. (Alaska's health, Feb. 1953. v. 10, p. 1, illus.)

Contains account of a campaign to test a thousand school children of the Gastineau Channel area. Details of procedure, share of the Health Dept., further treatment of patients, nature of the tuberculin test, etc., are described.

Copy seen: DSG.

27734. ALASKA'S HEALTH. Tuberculosis medical conference studies application of 400 cases awaiting hospitalization; 227 get class I priority for first beds. (Alaska's health, Dec. 1953. v. 10, p. 6)

Contains information on health and other agencies concerned with Alaska's TB problems participating in the conference; the workshop session; study of applications for hospital admission, etc.

Copy seen: DSG.

27735. ALASKA'S HEALTH. Vaccinations against TB given to 2,486 Alaskans in past year; BCG vaccine given in 41 Kenai - to - Barrow villages. (Alaska's health, June 1953. v. 10, p. 1-2, illus.)

Contains an account of TB activities for Apr. 1952-Apr. 1953, conducted mostly among very young children. Some data on the incidence of positive reactors, scope of work, value of dry vaccine, aid of the military and teachers, etc., are included.

Copy seen: DSG.

27736. ALASKA'S HEALTH. Warn that bears and rabbits can be dangerous though dead; scientists caution hunters of risks of trichinosis and tularemia infections from wild bear or rabbit meat unless both are thoroughly cooked, and warn about care needed when cleaning rabbits. (Alaska's health, Jan.-Feb. 1951. v. 9, no. 1-2, p. 3-4, illus.)

Contains information on the incidence of tularemia in Alaska: transmission, symptoms, prevention; clinical course, research, etc.; also incidence of trichinosis in the Territory: pathology, symptoms, animal vectors, prevention, etc.

Copy seen: DSG.

27737. ALASKA'S HEALTH. Wild greens and berries abound throughout Alaska; four of them are poisonous.

27739. ALBRECHT, FRITZ. Untersuchungen über den Wärmehaushalt der Erdoberfläche in verschiedenen Klimagebieten. (Germany. Reichsamt für Wetterdienst. Wissenschaftliche Abhandlungen, 1940. Bd. 8, Nr. 2, p. 1-80, tables, graphs, maps, diagrs.) 70 refs. *Title tr.:* Investigations of the heat economy of the earth's surface in various climatic regions.

"The heat economy of 12 stations distributed throughout the world in different characteristic climatic regions is calculated. The annual trend of the heat economy of the polar sea north of eastern Siberia indicates that above the arctic drift ice, during the duration of the ice cover, the heat intake exceeds the heat output by about 4 kcal./sq. cm./yr. Heat conditions at Sodankylä (Lapland) and Irkutsk (U.S.S.R.) are compared with those at Potsdam (Germany). Evaporation in Irkutsk and Sodankylä is limited to six summer months, and is small in comparison with

precipitation. The freezing and thawing of the soil and the melting of the snow cover cause a relatively large thermal intake by the soil at these stations. Station Eismitte (Greenland icecap) indicates a considerable radiation loss of 7.5 kcal./sq. cm./yr."—SIPRE.

27749. ALIMOV, V. D. Nuzhen li nashemu tralovomu flotu "bol'shoi trawler"? (Rybnoe khoziaistvo, June 1948. t. 24, no. 6, p. 21-25, tables, diagr.)
Title tr.: Does our trawler fleet need a "big trawler"?

The Soviet trawlers with capacity for a 20-day cruise show the greatest efficiency. Larger trawlers however, like the French *Marcella* (2340 tons) and the English *Nordkapp* and *Greenland* with capacity for 40 to 50-day cruises, are being recommended. The technical and economic arguments of the larger vessels' proponents are analyzed, with conclusion that the conditions of Soviet fishing (short distance from Murmansk to the best fishing areas) do not warrant introduction of larger vessels, and that the trawler in use is the type best suited to these conditions. **Copy seen:** DLC.

27750. ALISOV, BORIS PAVLOVICH, 1892- . Klimaticheskie oblasti i ralony SSSR. Moskva, OGIZ, 1947. 211 p. 72 text maps, fold. map. 35 refs.
Title tr.: Climatic zones and regions of the U.S.S.R.

Includes (p. 38-47, 133-55, 175-200) some data on the Soviet arctic climatic peculiarities, where basic air mass formations are of arctic type. The arctic zone consists of three climatic regions: western Atlantic with intensive cyclonic activity all year round; central-Asiatic with prevailing cyclones in summer and anti-cyclones during the winter; eastern Pacific where in winter some cyclones come from the Aleutian depression and the prevailing winds are southeast blowing from the northern part of the Pacific.

"A study of a heat pump installation in a five-room home near Port Credit, Ont., in the Canadian Arctic, and in a gold mining area of northern Ontario is presented. The heat pump, or reverse cycle refrigeration, uses heat recoverable from water, air, earth, or a source of waste heat. The heat pump for arctic use, utilizes lake water at 32° F. available below the 8-ft. ice cover, yielding 144 B.t.u./lb. when freezing. A liquid-cooled 2-cylinder diesel engine rated at 15 hp. is used as power source. The pump is designed to meet the heating capacity of 130,000 B.t.u./hr. needed for a small station."—SIPRE. **Copy seen:** DLC.

27753. ALLEN, CLARENCE R., and G. I. SMITH. Seismic and gravity investigations on the Malaspina Glacier, Alaska. (American Geophysical Union. Transactions, Oct. 1953. v. 34, no. 5, p. 755-60, 2 text maps, 2 profiles) 12 refs.

Contains report on investigations July-Aug. 1951, to determine ice thickness and configuration of the subglacial floor, and to provide information for study of structural relationships and modes of flow within the glacier. The procedure in seismic reflection shooting and gravity investigations is described. The base of

the ice was found to be below sea level along the entire ten-mile seismic profile line, reaching depths of more than 700 feet below sea level in the central part of the line, and becoming shallower northward toward the mountains and southward toward the ice margin. "Deeper reflections substantiate the inferred sedimentary nature of the subglacial rocks and show geologic structures consistent with the regional pattern." Seismic reflection shooting was decided to be more practical than gravity measurements in isolated glacier field studies. "Seismic refraction shots beyond the present margin of the glacier suggest a thickness of unconsolidated proglacial deposits in excess of 500 ft." Map shows location of camps and of seismic and gravimeter profile lines.

27757. ALLISON, A. C. The Lapps: origins and affinities. (Geographical journal, Sept. 1953. v. 119, no. 3, p. 315-20, text map)

Contains a general study of the Lapps which considers their origin, language, characteristics, way of life, education, and present and future conditions and problems. The author concludes that the Lapps form a distinct racial group "comparatively homogeneous within itself and unlike any other people in Europe, including their Scandinavian neighbors." They are a Uralic people who have occupied northern Scandinavia for two or three thousand years or more, and have in that time differentiated into northern, central, and southern groups, each speaking distinct tongues. Most Lapps are reindeer breeders and herders living a nomadic life; the origin of this is discussed. The Lapps' future survival is questionable. They are not increasing appreciably, and continued inbreeding has produced a high incidence of physical abnormalities, although as yet their physical strength seems unimpaired. They may disappear through admixture with the Scandinavians.

27758. ALONZO, GIOVANNI. Sulle alterazioni delle fibre nervose in seguito al congelamento dei tessuti soprastanti. (Archivio per le scienze mediche, 1889. v. 13, n. 9, p. 229-44, 30 illus. on plate) 22 refs. *Title tr.:* Changes of nerve

fibers following the freezing of the covering tissues.

Contains an account of microscopic observations on degeneration and regeneration of peripheral nerves in guinea pigs and rabbits, following experimental freezing. The relation of injury to exposure time, temperature, and depth within the organs are discussed.

Copy seen: DSG.

27759. AL'PEROVICH, M. L. Novaja teploľubivaja ryba v kamchatskikh vodakh. (Priroda, 1940, no. 7, p. 77-78)

Title tr.: A new heat-loving fish in Kamchatka waters.

Contains a report of the first find near the eastern coast of Kamchatka Peninsula, of *Cololabis saira*, a fish native to warmer waters. This is explained by the gradual warming of the climate of the Northern Hemisphere since the middle of the 19th century. A list of four southern fishes added recently to the fauna of the Kamchatka waters is appended.

27760. ALSING, INGER. Quelques communications statistiques du Groenland de des iles Féroé. (In: Congrès International des Sciences Anthropologiques et Ethnologiques. 2d, Copenhagen, 1938. Compte rendu, 1939. p. 212-13) *Title tr.:* Some statistical communications from Greenland and The Faeroes.

Contains a summary of the salient features of the vital statistics of Greenland in the period 1900-1936, when the birth and death rates passed those of Denmark. Till 1860 births and deaths were almost equal, since that time the birth rate has steadily increased. Mortality is higher among men than women, and ten percent of all deaths are due to accidents (mostly kayak drownings).

Contains information on the financial aspects of the Bill; water supply and waste disposal as means of dissemination of diseases; modern requirements for these facilities in the Arctic; special requirements in permanently frozen ground; realization of the Bill, etc.

Copy seen: DSG.

27762. ALTER, AMOS J. Nordic health notes. (In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953. p. 101-103)

Based on the author's study trip to Scandinavia, Nov. 1950-Feb. 1951. Included are comparisons between Alaska and Scandinavia in respect to geography and climate, and diseases prevalent among Lapps and Alaskan Eskimos. Research and public health work of the individual Scandinavian governments, including Finland, are noted.

Copy seen: CaMAI; DLC.

27763. ALTER, AMOS J. North European sanitation and disease problems compared with those in Alaska. (Alaska's health, Aug. 1951. v. 9, p. 1-2, illus.)

Contains an account based on a three-month study tour of arctic Sweden, Norway and Finland. Housing, water treatment and supply, waste treatment and disposal, food poisoning studies, etc. are described and compared with those in Alaska. Some new developments, like filtering water through glacial soils, new water and sewage treating methods etc., are noted.

khoziaĭstvennoe znachenie zostery v
Belom more. (Rybnoe khoziaĭstvo, Sept.
1947. t. 23, no. 9, p. 25-26, table)
Title tr.: The significance of *Zostera* to
the White Sea fisheries.

The alga *Zoster marina* (eel grass)
which grows in considerable quantities
in the White Sea, has commercial im-
portance as raw material for production
of packing stuff, paper and agar-agar.
But recent investigations in Kandal-
aksha Bay by the Polar Institute for
Fisheries and Oceanography has re-
vealed that the White Sea herring de-
posits its eggs chiefly on *Zostera* leaves,
and spawns only in areas rich in this
seaweed. The industrial utilization of
Zostera therefore, must be subordinated
in the interest of the fisheries.

27768. ALTUKHOV, K. A. Vozdeĭstvie
promysla na vosproizvodstvo zapasov
melkof sel'di v Kandalakshskom zalive.
(Rybnoe khoziaĭstvo, May 1953. t. 29,
no. 5, p. 40-41) **Title tr.:** The influence
of fishing on the recovery of stock of
small herring in Kandalaksha Bay.

Decrease of the herring resources in
Kandalaksha Bay is attributed to the
use of new, highly efficient fishing methods
and their extension into the spawning

grounds. Prohibition of fishing in spawn-
ing areas and other restrictions are
suggested for all White Sea coastal
waters.

Migratory birds of relict distribution:
some inferences. (Auk, 1953. v. 70,
no. 4, p. 461-69)

The list of investigated species includes
the Ross's goose (*Chen rossii*), which
breeds only in a relatively small area in
the Perry River region of the Canadian
Arctic, the Labrador duck (*Camtorhyn-
chus labradorius*) now extinct but believed
to have nested on the coast of Labrador,
and the bristle-thighed curlew (*Numen-
ius tahitiensis*) with breeding range in
Alaska. In the discussion of the "relict
species" concept which follows, a com-
parison is made of relict and dominant
species, and data given on restricted
winter ranges and the evolution of
migration routes. **Copy seen:** MH-Z.

27774. AMERICAN FORESTS. Snow
weasel. (American forests, 1946. v. 52,
p. 66-67, illus.)

"Trial tests of the T-15 cargo carrier
(snow-weasel) proved its suitability for
use on snow courses in forest work.
The machine is 12 ft. long, weighs 1.5
tons, is equipped with rubber-soled steel
tracks, and operates similarly to crawler-
type tractors. The machine can turn in
a 13-ft. radius, take 45° grades and 19-in.
vertical obstructions. It is capable of
speeds of 24 mph., and has a cruising
range of 125 mi. The snow-weasel sinks
about 2 in. in hard-packed snow and 18
in. in light snow when fully loaded (1260
lb.)."—SIPRE.

hydrology, 1941-1950, United States
and Canada. Washington, D. C., U. S.
Govt. Print. Off., 1952. 408 p. Edited
by Ray K. Linsley.

Attempt is made to cover all known
hydrologic literature published in the
U. S. and Canada, 1941-1950, as a
continuation of the 1935-1940 volumes
of the International Association of
Scientific Hydrology (q. v.). References
are assembled here alphabetically by
author and briefly annotated; place and
subject indexes are appended. Smallest
geographic areas indexed are states and
territories of the U. S., provinces of
Canada, and river basins. Considerable
arctic material.

27785. ANDERSON, ANTON A. Construction and maintenance problems

encountered on the Alaska Railroad. (*In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 136-49*)

Contains an historical account of the building of the Alaska Railroad, the early stages of surveying and planning being given by excerpts from the Alaskan Engineering Commission's reports for the 1914-1917 period. A survey of the three railroads existing in 1914, and the acquisition, transportation, and distribution of equipment are described, followed by an account of the actual construction and the living conditions of the workmen. Main construction problems were (and are) drainage and permafrost conditions and transportation of equipment. After completion in 1923, few improvements were made until 1947 when major reconstruction was undertaken.

rafi baza
ovetskoe

olenevodstvo, 1934. vyp. 1, p. 99-164, fold. map, tables, diagrs.) 150 refs. **Title tr.:** The feeding base of the Yamal reindeer industry.

Contains a description of the Yamal district, an area of 525,940 sq. km. north of 66° N. lat. 64°-80° E.; its population (19,700, including 13,200 minor nationalities, mainly Samoyeds); and the reindeer industry, one of the principal features of the regional economy. At the end of 1932 the herds numbered 356,000 head, of which some 13,600 belonged to kolkhozes, 37,000 to sovkhoses. The reindeer farming is based on natural pastures, which are divided into spring, summer and winter grazing lands. The phytogeographic regions (100 characterized) are taken as a base for calculating the grazing area and fodder production. The principal regions are Karsk tundra, Polar Ural and Ob' River valley. The study was undertaken to promote systematic exploitation of pastures and organization of state and collective farms. It is based in part on the author's expedition to Yamal in 1932. Index of plant species at end of volume. Summary in English. **Copy seen:** DLC.

27794. ANDREEV, VLADIMIR NIKOLAEVICH, 1889- . O priroste kustistikh lishainikov. (Akademicheskii SSSR. Doklady, 1952. nov. seriia, t. 85, no. 4, p. 909-912) **Title tr.:** On the growth rate of bushy lichens.

Contains results of the investigation of about 25,000 specimens of *Cladonia alpestris*, *C. silvatica*, and *C. rangiferina* from various northern regions of the U.S.S.R., with the description of the method, some statistical data (table 1) and a discussion of control of the lichen growth by more orderly use of reindeer pastures. **Copy seen:** DLC; MH.

Contains data on the results of cultivating some arctic shrubs, flowering plants mosses and lichens introduced to the Moscow area (grounds of the All-Union Agricultural Exhibition) in 1939. The plants were taken from the Khibiny Mts. in Kola Peninsula and Bol'shezemel'skaya Tundra of Arkhangel'sk province.

Data are given on the changes in these plants under the influence of different environmental conditions.

Contains a geobotanical study of reindeer pastures of the northern section of Kanin Peninsula made during the author's expedition in the summer of 1928; with data on topography (p. 6-9), climatic factors: temperature, precipitation, winds, etc. (p. 9-21); and analyses of plant associations of various landscape zones of tundra (high tundra, hillock tundra, sandy hillock tundra, etc.) with lists of typical plants for each zone (p. 21-66); and a survey of most important plant associations (p. 66-71), a table of areas covered by lichens (p. 71); a discussion of reindeer breeding in relation to pastures (p. 72-75); and ecological characteristics and distribution of lichens, p. 70-82. Summary in German. **Copy seen:** Microfilm in CaMAI and DLC, from Dr. Eric Hultén's copy.

27797. ANDREEVA, EKATERINA V. IŮ. M. Shokal'skii; okeanograf, meteorolog, geograf. Leningrad, Gidrometeorologicheskoe izd-vo, 1950. 55 p., ports, illus. **Title tr.:** IŮ. M. Shokal'skii; oceanographer, meteorologist, geographer.

A short popular outline of the life (1856-1940) and activities of an outstanding Soviet scientist, who contributed substantially to investigation of the arctic regions. His endeavour to call attention to the Northern Sea Route as early as 1893, and his constant interest in arctic problems are noted. His contributions to oceanographic, cartographic and educational work are stressed.

Copy seen: DLC.

27798. ANDREWS, H. A. Bibliography of Franz Boas. (In: Boas anniversary volume, 1906. p. 515-59)

Contains a chronological record of 302 books and papers written by Boas, and a list of works of which he was editor. These are followed by a subject index which provides convenient access to Boas' contributions on northern peoples, localities and phenomena.

Copy seen: DLC.

27799. ANDREWS, M. C. Frostbite. (British medical journal, May 17, 1941. v. 1, p. 763-64)

Contains text of a letter to the editors advising against the use of friction in frostbite and recommending for milder cases to leave blisters intact; to paint with 1:1000 solution of acroflavin, dust with antiseptic powder, cover with wool, and in case of hands, wear loose woolen gloves. **Copy seen:** DSG.

27800. ANDREWS, RICHARD A., and others. Dairy and potato farms in the Matanuska and Tanana valleys, 1951. 21 p. 13 tables. (Alaska. Agricultural Experiment Station. Mimeograph circular 3) 3 refs. *Other authors:* H. A. Johnson, P. F. Martin.

Contains material based on records of 46 farms in the Matanuska and four in the Tanana valley. Dairy and potato farming in the Matanuska valley are described in some detail, followed by brief survey of land use, farm size, crop yields, and grain production. In the Tanana valley most farms produce potatoes and vegetables; land use is briefly noted. Tables provide statistics on each part of the survey, comparing the farm situation of 1951 with 1947, 1949, and 1950. **Copy seen:** DA.

Contains a study of faunistic relations of northern sections of the Pacific and

Atlantic Oceans as typified by disjoint distribution of the common herring (*Culpea harengus*), some other fishes (*Gadus morrhua*, *Salmo*, *Hippoglossus hippoglossus*, etc.), some Decapoda (*Lithodes maja*) and many other marine organisms. A scheme of the development of amphiboreal areas of marine fauna in the Northern Hemisphere is represented (sketch maps 8-11). It is concluded that the contemporary disjoint amphiboreal areas were formed in the Pleiocene epoch through Bering Strait. The migration of the fauna was from the Pacific into Atlantic Ocean along the northern coast of North America.

"Snow is classified by size into small, medium and large grains, and by texture into porous, soft, hard, and very hard. Approximately 19 per cent of all snow observed in Finland during the winters of 1948-51 was hard, medium grained, old snow. Snow depth was measured by a gage consisting of a calibrated tube, 50 cm. long with a 100 cm.² cross-section area. The instrument is pressed into the snow and the depth measurements are read directly from the calibrated tube. Snow depths varied in Finland from 1-37 cm. depending on location. Snow density measurements are made by weighing the snow in the tube of the snow gage. Snow densities varied from 0.16 for porous, small grained, new snow to 0.42 for very hard, large grained, old snow.

Snow hardness was measured by dropping two metal cones with 60° and 90° vertex angles from a height to 10 cm. Snow hardness is calculated as the ratio of the striking force to the area of the depression of the cones on the snow surface. Snow hardness measurements varied from 11 for soft porous, medium grained, powder snow to 2360 for hard snow crust."—SIPRE.

27824. ANTROPOVA V. V. Iz istorii transporta u narodov Sibiri. (Akademiia nauk SSSR. Institut étnografii. Kratkie soobshcheniia, 1952. t. 15, p. 23-26) *Title tr.:* From the history of transportation among the Siberian peoples.

Contains notes on types of boats (native and Russian), types of dog sledges, Russian influence upon native means of transport, etc. These notes are drawn from the materials for the projected "Ethnographic atlas of Siberia", described by M. G. Levin, q. v.

Copy seen: DLC.

27825. ANUCHIN, DMITRII NIKOLAEVICH, 1843-1923. Gorod Mangazeya i Mangazelskaiia zemlia; istoriko-geograficheskaiia zametka. (In his: Izbrannnye geograficheskie raboty, Moskva, 1949, p. 119-27) *Title tr.:* Mangazeya town and Mangazeya land; an historical-geographical note.

Contains an account of old Mangazeya, a town founded in 1601 on the River Taz near the site of the present-day Khal'mer-Sede; and of new Mangazeya, now Turukhansk, founded ca. 1610 at the confluence of the Turukhan and Yenisey. Information is given about their size and buildings, etc., and a detailed analysis made of the word "Man-

gazeya". It is concluded that this was originally the name of a local Yurak-Samoyed tribe ("Molgonzei") and that it survived in mutilated form as the name of the region and of its principal town.

Copy seen: DLC.

27826. ANUCHIN, DMITRIĬ NIKOLAEVICH, 1843-1923. K istorii oznakomleniia s Sibir'iu do Ermaka; drevnee russkoe skazanie "O chelovičeskih neznaemykh v vostochnel strane". (Moskovskoe arheologicheskoe obshchestvo. Trudy, 1890. t. 14, p. 227-313, 14 illus. incl. facsim., maps, fold. map) **Title tr.:** The history of knowledge of Siberia before Ermak; the old Russian narrative "On the unknown peoples in the eastern the eastern lands."

Contains text (p. 230-36) and comments on this Novgorodian chronicle written by a merchant around 1500 A. D. The copy of the ms. reproduced here was found in the Solovetsk library. Its anonymous author gives an account of nine Samoyedic tribes, mostly fantastic stories of cannibals, men changing their skin, headless men, etc. Anuchin in his discussion which comprises the bulk of this paper, gives information on the Samoyeds, Zyryans, Tungus and Ostyaks, drawn from Russian literature since the 15th century, and from narratives of western European travelers. The Yuraks ("Molgonzei" of the old Russian sources) were first mentioned in 1096 A. D., and the people of Novgorod knew them as neighbors of the Ugrians and Zyryans; Ostyak narratives about the Samoyeds and about wars with them are mentioned (p. 246-49). Anuchin includes facsimile reproductions of parts of old maps showing the northern lands inhabited by Samoyeds; also reproductions of old engravings of Samoyed types, their idols, etc.

This work was reviewed by Axel O. Heikel (*in*: Suomalais-ugrilainen seura. Aikakauskirja, 1894. v. 12, no. 2, p. 3-11). Heikel finds that the Novgorodian chronicle is not a reliable source for ethnological research, some accounts which sound fantastic however, may merely be based on a misinterpretation of actual customs and beliefs.

Copy seen: DLC.

27827. ANUCHIN, DMITRIĬ NIKOLAEVICH, 1843-1923. Sani, lad'ia i koni kak prinalozhnosti pokhoronnago obrad'a. (Moskovskoe arheologicheskoe obshchestvo. Trudy, 1890. t. 14, p.

81-226, 44 illus.) **Title tr.:** Sledges, boats and horses as accessories of the funeral rite.

Contains a study on funeral rites for princes and nobles in Old Russia as described in chronicles and other documents over several centuries. Sledge or boat burial is shown to have been a widespread custom, and burial of the dead in sledges, even in summer, to have been known among some rather primitive northern peoples, e. g. the Zyryans, Votyaks, Cheremis, and Chuvash (p. 134-35); it was also practiced in Old Egypt and western Europe. Boat burial is also of world-wide dissemination; it, too, was found among some northern peoples, e. g. the Chukchis, Alaskan Eskimos, Lapps, Tungus, Orochis, Ostyaks and Voguls (p. 169-72). Among the Tungus, Yuraks, and Ostyaks, the dead, wrapped in reindeer skins or sometimes laid in a hollowed tree trunk, are placed upon an elevated platform. The Ostyaks of the Ob' are buried in the ground, cofined in one half of a boat (the bow end) with two planks from the other half forming a lid for the coffin; beside the dead man are laid all his belongings. A similar arrangement is used among the Voguls. Burial in a boat probably originated from the idea that the dead must cross water on the journey to the other world.

This study was reviewed in Internationales Archiv für Ethnographie, 1892, Bd. 5, p. 102-103; and abstracted by Oliver J. Wardrop in Royal Anthropological Institute of Great Britain and Ireland, Journal, 1892, v. 21, p. 321-29.

27828. APPELGREN-KIVALO, HJALMAR, 1853- Die Grundzüge des skythisch-permischen Ornamentstiles. [Helsingfors, 1912] 20 p. 28 illus. (offprint from Zeitschrift der Finnischen Altertumsgesellschaft, Bd. 26) **Title tr.:** Characteristics of the Scytho-Permian style of ornament.

Contains an investigation of bronze plaques with fantastic figures of animals and men, found in abundance on both

sides of the Ural Mts., in the vicinity of Cherdyn, Solikamsk, Ukhta, and other places, now inhabited by Zyryans. The author concludes that the plaques were used for purely ornamental purposes and had passed through three degrees of development. Originally copies of the southern specimens which came from the shores of the Black Sea (e. g. illustrations of the Greek myth of Ganymede), they were later mixed with the native Zyryan ornamental motifs, and thus a Scytho-Permian style of ornament was developed. **Copy seen:** DLC.

27830. ARCHIV FÜR ANTHROPOLOGIE. Aus der Generalversammlung des naturhistorischen Vereins für Rheinland und Westphalen in Andernach, am 26. Mai 1874. (Archiv für Anthropologie, 1874. Bd. 7, p. 280-92) **Title tr.:** From the general meeting of the Natural History Association for Rhineland and Westphalia, held in Andernach, May 26, 1874.

Includes a notice (p. 291) on a Lapp skull found in 1844 at Hamm (Germany), 27 ft. deep in the ancient bed of the Lippe River. **Copy seen:** DLC.

27831. ARCHIV FÜR WISSENSCHAFTLICHE KUNDE VON RUSSLAND. Die Renntierzucht in Lappland. (Archiv für wissenschaftliche Kunde von Russland, 1858. Bd. 17, p. 358-61) **Title tr.:** The reindeer breeding in Lapland.

Contains short account of the biological life of domesticated reindeer, including Lapp terminology. Herding and use of dogs, milking of reindeer cows, etc. are noted. (From the Finnish journal *Suometar*). **Copy seen:** DLC.

27832. ARCHIV FÜR WISSENSCHAFTLICHE KUNDE VON RUSSLAND. Die Sonnensöhne; ein episches Gedicht der Lappen. (Archiv für wissenschaftliche Kunde von Russland, 1953. Bd. 12, p. 54-61) **Title tr.:** The sons of the sun; an epic song of the Lapps.

Contains quotation from and comments upon an epic song, supposedly written down from the recitation of a native Lapp, but subsequently shown (*ibid.*, 1854, Bd. 13, p. 1-4) to have been composed by pastor Fjellner in Sorsele. **Copy seen:** DLC.

27833. ARCTIC. Baffin expedition 1953. (Arctic, July 1953. v. 6, no. 2, p. 163-64)

Contains a preliminary note on the Arctic Institute of North America expedition (in cooperation with the Swiss Foundation for Alpine Research) to the Cumberland Peninsula of Baffin Island. Glaciological and geomorphological work on the Penny Highland icecap and the Pangnirtung Pass area, botanical and zoological work in the Pass area, and ornithological studies around the coast of the Cumberland Peninsula were carried out, starting in May, by 13 scientists led by P. D. Baird. A preceding note reports the death, while in the field,

of the expedition's glaciologist, W. R. B. Battle. **Copy seen:** CaMAI; DLC.

27834. ARCTIC. Banks Island party. (Arctic, July 1953. v. 6, no. 2, p. 164)

Contains brief note on a two-man expedition, led by T. H. Manning, to Banks Island (western Canadian Arctic) starting May 1953. Its purpose was to continue a coastal survey for the Defence Research Board of Canada begun by Manning and A. Macpherson in summer 1952.

Copy seen: CaMAI; DLC.

27835. ARCTIC. Blue Dolphin Labrador expedition—winter project, 1953. (Arctic, July 1953. v. 6, no. 2, p. 165-66)

Contains a note on the expedition sponsored by the U. S. Office of Naval Research and the Arctic Institute of North America to the tidal estuary of Lake Melville during Mar.-Apr. 1953. Four scientists led by D. C. Nutt carried out oceanographic studies along the north and south shores and western end of the lake. Temperature profiles were taken, ice thickness and snow depth on the lake measured, and volume and flow measurements made on the Kenamu, Hamilton, Goose, and North West Rivers. Forest types and physiography were studied. Equipment is described.

Copy seen: CaMAI; DLC.

27836. ARCTIC. Ellesmere Ice Shelf party. (Arctic, July 1953. v. 6, no. 2, p. 164)

Contains brief note on a two-man expedition to northern Ellesmere Island, starting Apr. 1953. G. Hattersley-Smith, Defence Research Board of Canada, was to make a glaciological study of the ice shelf, believed to be the source of "ice islands." R. Blackadar, Geological Survey of Canada, was to assist and to study the geology of the coastal area.

Copy seen: CaMAI; DLC.

27837. ARCTIC. Expedition to Ungava, summer 1953. (Arctic, Dec. 1953. v. 6, no. 4, p. 277-78)

Contains brief account based on report by O. Agathon, leader of the two-man party from the American Museum of Natural History which crossed Ungava by plane from west to east, just south of the tree-line. At Rupert House, Great Whale River, Lower Seal Lake, Ft. Chimo, Indian House Lake, and

Knob Lake, rumors of the occurrence of grizzly bear were investigated. A specimen of barren ground caribou was taken and collections of small mammals, birds, and fresh-water life were made. It was concluded that grizzly bear probably do not exist in that region.

27837L. ARCTIC. Fourth Alaskan Science Conference. (Arctic, Oct. 1953. v. 6, no. 3, p. 224.)

Note on the Conference held in Juneau, Sept. 28-Oct. 3, 1953. Some hundred papers were presented, emphasis being placed on Alaskan development.

Copy seen: CaMAI; DLC.

27838. ARCTIC. Geographical names in the Canadian North. (Arctic, Dec. 1953. v. 6, no. 4, p. 280)

Contains list of 44 names and changes adopted May and June 1952, for official use in the Northwest Territories. The names are to be found in the Dubawnt Lake and Fort Collinson map sheets. Lat. and long. are given for each location.

Copy seen: CaMAI; DLC.

27839. ARCTIC. Research projects at the Arctic Research Laboratory, Barrow, Alaska. (Arctic, Oct. 1953. v. 6, no. 3, p. 223)

In summer 1953 all research projects at the Arctic Research Laboratory were administered by the Arctic Institute of North America. Of 12 projects, 11 were carried out at Barrow and along the arctic slope of northern Alaska; one involved work on the southern shore of the Alaska Peninsula. The projects and research workers are listed.

27840. ARCTIC CIRCULAR. Aerial reconnaissance by the Geological Survey of Canada in the Districts of Keewatin and Mackenzie. (Arctic circular, Oct. 1953. v. 6, no. 4, p. 46) 2 refs.

Contains notes on "Operation Keewatin," a geological reconnaissance initiated in summer 1952. C. S. Lord and four geologists, in two helicopters and supporting Norseman aircraft, mapped 57,000 sq. miles of southern Keewatin in 113 days at a cost of \$207,000. Future

operations will be supplied by boat as far as possible, involving shipments a year in advance. "Operation Baker, 1954" will map central Keewatin, and "Operation Thelon, 1955" will explore eastern Mackenzie District south of 65° N. **Copy seen:** CaMAI; DLC.

27841. ARCTIC CIRCULAR. Annual R. C. M. P. walrus hunt in the vicinity of Coats Island, 1952. (Arctic circular, Oct. 1953. v. 6, no. 4, p. 47)

Contains note based on official Royal Canadian Mounted Police patrol report. The party left Eskimo Point on west coast of Hudson Bay 61°07' N. 94°03' W. on Sept. 9, 1952. Stops were made at Marble Island, Chesterfield, Depot Island, Cape Kendall (Southampton Island), Walrus, Coats, Bencas, and "Covered" Islands. No walrus were found until return to Walrus Island Oct. 1, where nine were secured. Party returned to Eskimo Point Oct. 12.

27842. ARCTIC CIRCULAR. Cosmic ray observations in the Thule area 1952. (Arctic circular, Jan. 1953. v. 6, no. 1, p. 4-6)

Contains a brief account of observations carried out in Aug.-Sept. 1952 by the U. S. Office of Naval Research with the aim to determine the charge and energy spectrum of the primary cosmic radiation and the interaction of the latter with the earth's atmosphere at high altitudes. Large constant level, plastic balloons ("skyhooks") were launched from the U.S.C.G.C. *Eastwind* with instruments and instrumented rockets. "Two methods of obtaining data were used: balloon-rockets and balloon-borne counters and nuclear emulsion plates which were parachuted to earth." The U.S.S. *Atka* assisted in recovering the instruments. Eight of the 14 flights proved successful; the results of the operation will be published at a later date. Tribute is paid to the pioneering work of the J. M. Wordie Expedition of 1937 in cosmic radiation measurements.

Copy seen: CaMAI; DLC.

27843. ARCTIC CIRCULAR. Eskimo representation at the Coronation Naval Review. (Arctic circular, Oct. 1953. v. 6, no. 4, p. 48)

Contains brief note on presence of two Eskimos, Thomas Aneroluk from Coppermine in Mackenzie District, and Simonee

from Frobisher Bay on Baffin Island, at the Coronation Naval Review at Spithead. They accompanied the Canadian Dept. of Transport's ice-breaker C.G.S. *d'Iberville*. **Copy seen:** CaMAI; DLC.

27844. ARCTIC CIRCULAR. Ice island T3. (Arctic circular, Jan. 1953. v. 6, no. 1, p. 2-4)

Contains summary of work on this floating ice island (called Fletcher's Ice Island) "the smallest of the 3 T's . . . in the central and least known part of the polar basin." Establishment of a meteorological station upon it and studies of the ice island's physical structure and movements, movement of the pack ice and seismic profiles of the ice island and the ocean floor are sketched. The account is based on a talk by Colonel Fletcher to the Arctic Circle in Ottawa, and on *Preliminary report* . . . by A. P. Crary and others (Arctic Bibliography No. 21306).

Copy seen: CaMAI; DLC.

27845. ARCTIC CIRCULAR. Lead-zinc mine in Greenland. (Arctic circular, Jan. 1953. v. 6, no. 1, p. 10)

Contains a note on the exploratory and preliminary work of a Danish mining company, Nordisk Mineselskab A/S, in the lead and zinc deposits at Kong Oscars Fjord (72°22' N. 24° W.); an airstrip was built and materials were brought in for building a winter camp, and for exploratory drilling; some 177 men—mostly Danes—were employed during the construction period; only 40 are expected to remain over the winter.

Copy seen: CaMAI; DLC.

27846. ARCTIC CIRCULAR. The 1951 census in the Northwest Territories. (Arctic circular, Oct. 1953. v. 6, no. 4, p. 37-42, text map, 2 tables) ref. Reprinted in *Arctic*, June 1954. v. 7, no. 1, p. 52-55

Contains brief history of census-taking in Canada, and a survey of methods of the 1951 census and the difficulties involved. Comparisons are made between the 1941 and 1951 Eskimo census figures, with comments on the age of the 1951 population; changes in the registration districts are noted. Tables show total population of Eskimos, Indians, and others in the Northwest Territories (by districts) and Yukon Territory, and Eskimo census figures for Northwest Territories, Quebec, and Labrador.

Copy seen: CaMAI; DLC.

27847. ARCTIC CIRCULAR. Population of Eskimo peoples. (Arctic circular, Oct. 1953. v. 6, no. 4, p. 43, table) 4 refs.

Contains brief note and table on Eskimo population throughout the world, including Alaska (Aleut and Eskimo), Greenland, Soviet Arctic, and Canada (Newfoundland-Labrador shown separately). Years for which figures are given are 1926, 1939, 1941, 1945, 1950, and 1951. **Copy seen:** CaMAI; DLC.

27848. ARCTIC CIRCULAR. Report of cancer in a captive varying lemming, *Dicrostonyx groenlandicus groenlandicus* (Traill). (Arctic circular, Feb. 1953. v. 6, no. 2, p. 18)

Contains a macro- and microscopic description of what is believed to be the first reported cancer in this species. It consisted of four, relatively large subcutaneous masses, of diverse cellular composition. A post-mortem examination was made by Dr. P. J. G. Plummer, Ottawa. **Copy seen:** CaMAI; DLC.

ARCTIC HEALTH RESEARCH CENTER, Anchorage, Alaska, see Berg, C. O. Prelim. survey biting diptera Yukon. 1953. No. 28077.

27849. ARCTIC INSTITUTE OF NORTH AMERICA. Award of Institute grants. (Arctic, Mar. 1953. v. 6, no. 1, p. 61)

Contains list of 18 scientists awarded grants by the Institute for field work in the 1953 season. The nature and area of the projected studies are indicated in each case. Investigations in glaciology, oceanography, plant and animal life, native peoples in Alaska, northern Canada and Greenland are included. Similar list for the current year's field work appeared in each spring issue of *Arctic* since 1948. A subsequent issue each year contains brief report on the grantee's work. **Copy seen:** CaMAI; DLC.

27850. ARENA, JAY MORRIS, 1909-, and others. Hypervitaminosis A; report of an unusual case with marked craniotabes. (Pediatrics, Dec. 1951. v. 8, no. 6, p. 788-93) Other authors: P. Sarazen and G. J. Baylin.

Contains a case report of a 6½ month female, white, with symptoms of hypervitaminosis A and severe softening of the skull; withdrawal of administration of a vitamin A preparation caused prompt disappearance of craniotabes and other symptoms. A comparison of symptoms of hypervitaminosis A, hypervitaminosis D, and infantile cortical hyperostosis is presented. **Copy seen:** DLC.

27851. ARENA, JOSEPH ALOYSIUS, Jr., 1922-, and others. Experimental frostbite; an inquiry into the effect of sympathetic block using tetra-ethyl ammonium chloride in the acute stage. (Angiology, Dec. 1950. v. 1, no. 6, p. 492-502, 10 illus.) 24 refs. Other authors: F. S. Gerbasi and A. Blain, III.

Contains an account of experiments with rabbits. TEAC block used to combat vasospasm did not reduce tissue loss; its effect on pain could not be determined as there was no evidence of pain in the controls; release of vasospasm caused increased edema, and wet gangrene to replace the dry type. **Copy seen:** DSG.

27852. ARENTZ, BOB. Forced landing. (Skyways, Apr. 1951. v. 10, p. 13, 38, illus.)

Describes flying difficulties of an Alaskan Division Military Air Transport Command C54 en route from Alaska north of 67° N. lat. to Edmonton, Alberta, Canada. Plane was forced down at Reed Lake, 45 miles from LePas, and far off-course, crew rescued and plane later flown into Le Pas and then to Edmonton. **Copy seen:** DLC.

27853. ARENTZ, BOB. Operation zero-zero. (Skyways, Nov. 1950. v. 9, p. 18-19, 48-49, illus.)

Describes the work of the Ground Control Approach (GCA) of the Airways and Air Communications System in Alaska. **Copy seen:** DLC.

27854. ARENTZ, BOB. Pilot's report: Cessna 195. (Skyways, Jan. 1950. v. 9, p. 16-17, 44-45, illus.)

27859. ARKHANGEL'SKIĬ, B. F. Predvaritel'noe soobshchenie ob usloviakh rasprostraneniia radio-voln v severnykh shirotakh. (In: Vsesoiuznaia konferentsiia po izucheniiu stratosfery, Leningrad 1934. Trudy, Moskva, 1935. p. 333-37, graphs). Also pub. in English in its: Proceedings of the All-Union Conference for the Study of the Stratosphere, Mar. 31-Apr. 6, 1934, pub. 1938, p. 189-92. *Title tr.:* Preliminary report on conditions of radio-wave propagation in northern latitudes.

Systematic visual and photographic measurements of the intensity field of radio stations within the medium (200-2000 m) and short (25-60 m) waves were made at Tikhaya Bay on Franz Josef Land (80°20' N. 52°50' E.) during the Second International Polar Year (1932-1933). Results show that "the study of radio-wave propagation is a reliable means of investigating the upper layers of the stratosphere," and that such a study is more productive at polar than at lower altitudes.

27860. ARMSTRONG, EDWARD A., and P. R. WESTALL. The song-flights of some northern birds. (Ibis, 1953. v. 95, no. 1, p. 143-44)

Contains description of song-flights of spotted redshank, Temminck's stint, Lapland bunting, red-spotted bluethroat and meadow pipit, and transcription of their songs; based on the author's observations during a visit to Lapland in June 1952 to study song-flights of various birds with a view to obtaining data on suggestion that dark coloration of the lower parts of birds functions as a sign-stimulus during aerial display.

Copy seen: MH-Z.

27861. ARMSTRONG, HARRY GEORGE, 1899-., and J. A. RAF-FERTY. Cold pressor test follow-up study for seven years on 166 officers. (American heart journal, Apr. 1950. v. 39, no. 4, p. 484-90, table) 18 refs.

Contains a seven-year follow-up study of annual blood pressures and cardio-

vascular histories of 166 officers who had the cold pressor test administered in 1940. Statistical analysis showed that the cold pressor test index is not correlated with hypertensive tendency, with age, flying time, or with basal blood pressure; the latter was found correlated with age; the number of hours a pilot has flown was found not to be correlated with hypertensive tendency, provided he has passed careful physical examination annually.

Copy seen: DLC.

27862. ARMSTRONG, HARRY GEORGE, 1899-. The loss of tactical efficiency of flying personnel in open cockpit aircraft due to cold temperatures. (Military surgeon, 1936. v. 79, p. 133-40, 2 tables, chart)

Contains a study, under standard conditions, of the causes of loss of tactical efficiency. The winter flying clothing, the poor functioning of personnel equipment, and deleterious physiological and psychological effects of low temperatures were found to be the main causes of loss of efficiency.

Copy seen: DLC.

27863. ARMSTRONG, TERENCE E. Beobachtungen auf dem nordsibirischen Schifffahrtsweg. (Polarforschung, 1951. pub. 1953. Bd. 3, Jahrg. 21, Heft 2, p. 127-29) 9 refs. *Title tr.:* Observations along the north-Siberian shipping lane.

Contains an account of the weather stations, the weather- and especially ice-forecasting service along the Northern Sea Route and on the Russian arctic seas generally. Long and short range predictions; periods of issuance of the forecasts; methods applied by some leading Soviet meteorologists; use of aircraft and ships in weather and ice reconnaissance, etc., are discussed and evaluated. "... there are now 69 coast stations but more ship reports are needed. Forecasts of ice conditions several months ahead have been made since 1923, based on sea temperature, Icelandic low, or cycles. More detailed forecasts for 5-10 days are based on movements of ice, and are 75 percent good but data are often insufficient."—*Meteorological abstracts & bibliography*, Nov. 1953. v. 4, no. 11, p. 1255. *Copy seen:* CaMAI; DWB.

27864. ARMSTRONG, TERENCE E. Canadian ice distribution survey. (Polar record, Jan. 1953. v. 6, no. 45, p. 673-74)

Contains a note based on an unpublished report of the Geographical Branch, Dept. of Mines and Technical Surveys, re-

garding the initiation, in 1951, of a study of ice distribution in the coastal and inland waters of Canada and the accompanying navigational difficulties. A card index of ice conditions is being prepared, each card bearing information (usually a quotation from a published account) on the state of ice at a certain time and place. At present the following areas are being indexed: the coastal waters of Beaufort Sea, the waters of the Arctic Archipelago, the Hudson Bay-James Bay region, Baffin Bay, Davis Strait, and the Newfoundland coastal waters; lakes and rivers flowing into these waters, are included. Author's appraisal of the method of this survey is appended.

27866. ARMY MEDICAL BULLETIN. Medical and sanitary aspects of Exercise Yukon. (Army medical bulletin, July 1948. v. 8, p. 575-76)

Contains a report on the Medical Dept. participation in this exercise conducted by U. S. Army Ground Forces during four months of the winter 1947-48 in Alaska. Includes information on prior indoctrination and exercises, shelter, heating, casualty evacuation and transportation, sanitation and waste disposal, water supply, personal hygiene.

Copy seen: DLC.

27867. ARMY MEDICAL BULLETIN. The prevention of trench foot. (Army medical bulletin, Apr. 1945. no. 87, p. 1-3. illus.)

Contains an account of recommendations and measures taken by the Surgeon General to prevent or reduce trench foot casualties in the armed forces. These include instructions on foot hygiene; issue of proper shoes and socks; pamphlets explaining the causes of trench foot, how to avoid it, and how to treat it before medical aid is available.

Copy seen: DLC.

27868. ARMY MEDICAL BULLETIN. Progress on the trench foot problem. (Army medical bulletin, May 1945. no. 88, p. 3)

Contains a brief statistical note on the decline of trench foot casualties of the Fifth Army in Italy. Better footgear, but especially greater discipline and unit responsibility are considered main factors in improvement of conditions.

Copy seen: DLC.

27869. ARMY MEDICAL BULLETIN. Service on the Alaska Highway. (Army medical bulletin, Mar. 1944. no. 74, p. 49-50)

Contains letter, Oct. 13, 1943, from a battalion surgeon with an Engineer Regiment in Alaska, on the general health condition of his unit. Includes data on inoculation, rations and diet, an outbreak of jaundice, prevention of frostbite, exanthema, venereal diseases, minor injuries, etc. Psychological as well as problems of morale, are also mentioned.

Copy seen: DLC.

27870. ARMY MEDICAL BULLETIN. Trench foot. (Army medical bulletin, Sept. 1945. v. 4, no. 3, p. 265-71)

Contains an account dealing with factors causing trench foot; its pathogenesis and pathologic anatomy; clinical course; symptoms; successive stages of the disease (pre-hyperemic, hyperemic, post-hyperemic); prevention; first aid and definitive treatment; prevention of complications; diet; etc.

Copy seen: DLC.

27871. ARNDT, GEORG. Über die plastische Hautdeckung von Erfrierungs- und Amputationsstümpfen unter besonderer Berücksichtigung des Wertes kurzer Amputationsstümpfen. (Zeitschrift für Orthopädie und ihre Grenzgebiete, 1947. Bd. 77, Heft 1, p. 40-78; Heft 2, p. 121-44, 28 illus.) 40 refs. **Title tr.:** Plastic skin surgery of frostbite- and amputation-stumps, with

special consideration of the value of short stumps.

Contains an account of the various kinds of skin flaps and their transplantation; types of leg and foot amputation; their choice and evaluation; amputations of the hand; preparing skin flaps for transplantation; moving of flaps; implantation and further management; covering of leg and foot stumps with skin flaps following various types of amputation (with case histories); follow-up management; other types of skin grafts; etc. **Copy seen:** DSG.

27872. ARNELL, HAMPUS WILHELM, 1848-1932. Lebermoose aus Kamtschatka, gesammelt von E. Hultén. (Hedwigia, 1927. Bd. 67, Heft 1-2, p. 110-12) **Title tr.:** Liverworts from Kamchatka, collected by E. Hultén.

Contains list of 28 liverworts with localities; description of *Nardia kamtschatica* n. sp. is included.

Copy seen: MH-BL.

27873. ARNOLD, JAMES RICHARD, 1923-, and **W. F. LIBBY.** Radiocarbon dates. (Science, Feb. 2, 1951. v. 113, p. 111-20) 8 refs.

Contains radiocarbon dates based on 5560 ± 30 years as half-life of radiocarbon. Includes (p. 118) material from archaeological sites in Alaska, viz. charcoal from artifact layer in the Yukon; wood from Ipiutak culture deposits; charcoal from Uniak (i. e. Unmak?) Island (Aleutians); wood from gold diggings near Fairbanks; charred wood from Iyatayet site, Norton Bay. See also H. B. Collins, *Radiocarbon dating in the Arctic*, 1953. **Copy seen:** DLC.

27874. ARNOTT, W. MELVILLE, and J. M. MACFIE. Effect of ulnar nerve block on blood flow in the reflexly vasodilated digit. (Journal of physiology, 1948. v. 107, no. 2, p. 233-38, fig., 3 tables) 12 refs.

Contains a report of experiments which demonstrated that ulnar nerve block does not significantly alter the blood flow (as estimated by calorimetry) in the digit of normal subjects in a condition of reflex vasodilatation. However, local cooling of the digit in such subjects lowered the blood flow, the degree of which was not further altered by ulnar block. **Copy seen:** DLC.

27875. ARNY, SAMUEL A. Taxonomic status of the bank swallow of North

America. (Condor, 1952. v. 54, no. 6, p. 356-57)

Contains a table of comparative measurements of adult specimen of bank swallow (*Riparia riparia*) from various regions, including a small collection of 22 specimens (12 adults and 10 young) from the Yukon valley in the vicinity of Eagle; the conclusion is that the race *R. riparia ijimae* does not occur in North America and should be excluded. The North American population of *R. riparia* is separable from that of Europe and Asia; the name *R. r. maximiliani* is available for this population. **Copy seen:** MH-Z.

27876. ARONIN, JEFFREY ELLIS, 1927-. Climate and architecture, progressive architecture book. New York, Reinhold, 1953. x, 304 p. approx. 300 refs.

Diverse climatic agents—precipitation, sun, temperature, and humidity—are discussed from viewpoint of application of knowledge of their character in the siting, design, and orientation of buildings and towns. The term "architecture" is coined to cover the field of the relation of climate to architecture. The principles involved are applicable to arctic conditions and specifically considered, e. g. the Eskimo architecture of Alaska and the Mackenzie River region of Canada (p. 3-4); the low houses with thatched roofs and lack of window surfaces which characterize the windy, rain-and-snow-swept slopes of Norway's fiords (p. 20-21). Discussed also is the relative position of the sun and the intensity of its energy at different times and under different conditions, and the utilization and control of this energy as a source of light and heat (p. 21-114). The so-called "winter chill" of the Arctic is considered (p. 168-74). Attention is called to the flat poorly drained muskeg soils south of Churchill, on the west coast of Hudson Bay where floating gravel bed foundations have had to be used in building construction (p. 249-50). As severe, bitter winds characterize the Arctic, tight construction is needed for buildings. Use of special chimneys, triple-glazed windows, and felt-lined joint strips at Resolute Bay, N.W.T. (74°24' N.) is noted (p. 206). Buildings in the Arctic should be as near rectangular in shape as possible (p. 205); the long axis parallel to the direction of the prevailing winds; so placed (because of snow drift) that the lee side

is not used as a means of access or as a source of light (example at Baker Lake cited p. 251); and (p. 255) there should be no overhangs. **Coppy seen:** DLC.

ARONSON, JOSEPH DAVID, 1889-. The medical history of Alaska. See Alaskan Science Conference, Nov. 1950. Proceedings, 1951. No. 20117.

27877. ARRHENIUS, SVANTE AUGUST, 1859-1927. Die Nordlichter in Island und Grönland. Stockholm, 1906. 27 p. illus., tables. (Svenska Vetenskapssakademien, Stockholm. Nobelinstitut. Meddelanden, v. 1, no. 6) refs. **Title tr.:** The aurora in Iceland and Greenland.

"Data on auroral frequency in Iceland and Greenland (1873-1903) are analyzed to determine the seasonal variations, the secular variations and the relation to the 25-93-day period. The 11-year cycle was evident but not as pronounced as that reported by Fritz for Norway. The double annual maximum (Nov. and March) was noticed in recent years but earlier a single Dec. maximum corresponding to daylight minimum was noted. The 25-93-day cycle was much weaker than in lower magnetic latitudes. A theory is presented to account for anomalies between Norway and Iceland or Greenland which lie nearer the magnetic pole."—*Meteorological abstracts & bibliography*, Oct. 1953. v. 4, no. 10, p. 1173.

27885. ASPELIN, JOHAN REINHOLD, 1842-1915. Antiquités du nord Finno-Ougrien; publiées à l'aide d'un subvention de l'État, par J. R. Aspelin. Dessins de C. Nummelin d'après les originaux gravés par E. Jacobson. Traduction française par G. Biaudet. Helsingfors, G. W. Edlund, 1877-1884. 5 pt.: (137, 241, 164, 81, 91 p.) illus., plates. **Title tr.:** Antiquities from the Finno-Ugrian North; published with the aid of a government subvention, by J. R. Aspelin. Drawings of C. Nummelin engraved by E. Jacobson. French translation by G. Biaudet.

Includes chapters on the stone age in Finland and northern Russia, the Ural-Altaic bronze age with finds from the Perm and Arkhangel'sk (Pinega) regions (pt. 1, p. 11-87); the iron age of the Permians with finds from the Pechora (pt. 2, p. 121-62); the iron age of Finland and Norwegian Finnmark (pt. 4). The arctic stone age of Scandinavia, the antiquities of Karelia and Finnmark, and the former Lapp settlements on the Kama River are mentioned (pt. 1, p. 15). The work is based chiefly on studies in the museums of Moscow and Leningrad in 1874, also on some excavations made by the author in 1872 in the governments of Perm, Vyatka, Kazan, Yaroslavl' and Tver. The many excellent illustrations of numerous artifacts, etc., and some skulls are given with rather brief explanations and comments in Finnish and French.

Contains a characterization of a famous teller of Russian epic tales, who has lived all her life in the village of Zimnyaya

Zolotitsa on the White Sea coast. As a young girl, Krūkova sang seven of these epics to A. Markov in 1900. Many years later she was rediscovered by Astakhova who noted down 40 of her tales, and she is said to know some 25 more. Krūkova is an improviser, readily creates new songs after the traditional patterns, and has made such on Lenin and Stalin, on arctic explorers (members of the *Cheliuskin* expedition) and other modern heroes. Chiefly for these feats she has achieved great fame in Soviet Russia. Her special gift, however, is for the old, traditional epic or *bylin*.

(Minerva medica, Jan. 27, 1942. anno 33, v. 1, n. 4, p. 112-21, 10 illus.) **Title tr.:** The treatment of frostbite lesions by marconitherapy. Technique and results. Clinical observations on pain syndromes in frostbite.

Contains an account of frost injuries in some past wars, and the history of short-wave therapy in general and that of mass therapy of frostbite in particular. This is followed by a report on 47 cases of frostbite of all degrees treated with short waves. The patients were soldiers and the injuries all in the lower extremity. Methods applied in different cases are presented together with selected case histories. The problem of pain is analyzed and discussed and the beneficial effect of short waves in reducing pain and secondary focal infections, stressed.

27909. AVGEVICH, V. I. Triangulatsiia v Arktike. (Geodezist, 1939. god 15, no. 1, p. 54-65, 13 illus.) **Title tr.:** Triangulation in the Arctic.

Contains a general description of triangulation work under arctic conditions. Practical advice is given, and the technique explained of building the observation towers with driftwood and hardened snow as basic materials. The best season for reconnaissance is Feb.-Apr., and for angle measurements, Mar.-May. The triangulation net on the Koteln'nyy Island pertains to the IV and V order with the length of sides seven and even 10 km. Main task of a geodetic party in the Arctic is a survey of the coast line and a strip of land not more than five km. from the sea. The triangulation of Koteln'nyy Island is typical for the entire arctic area, i. e., survey of strips of land and fourth order polar triangulation.

27910. AVGEVICH, V. I. Usloviia topograficheskikh rabot v Arktike. (Geodezist, 1939, god 15, no. 9, p. 76-81) **Title tr.:** Conditions of topographic surveying in the Arctic.

The chief aim of surveying is to represent accurately the true configuration of the coast. The triangulation net is the surest method of topographic survey in the Arctic, and the development of polar stations has made it possible. A scale of 1:50,000 is usually adopted for reconnaissance surveying, though 1:100,000 is acceptable, with contour intervals of 10-20 m. The technique of surveying in the Arctic with its numerous days of fog and rain is described. A well-organized field party works very quickly: e. g. a survey of a strip (356 km. in length and an average width of 4 km.) of the Koteln'nyy Island coast (1:50,000 scale) was completed in 48 working days.

27912. AVRORIN, NIKOLAI ALEK-SANDROVICH, 1906- . Geographical regularities of plant introduction as observed in the Polar Botanical Garden. (Akademiia nauk SSSR. Comptes rendus (Doklady) 1947. nov. seriia, t. 55, no. 5, p. 445-48)

Contains summarized results from the study of more than 2000 plant species (in 70 fam.) tested in the open during 14 years (1932-46) at the Polar-Alpine Botanical Garden near Kirovsk, Kola Peninsula (67°39' N. 33°39' E.). It is on the northern boundary of the taiga zone. Geographical analyses are given (table 1) of fructiferous plants (671 out of 2000 set fruits). Tested plants of three families (Liliaceae, Papaveraceae and Campanulaceae) are listed. The relation between the number of fructiferous plants and the total number of introduced plants is shown (table 2).

Cooling of the terminal phalanx of a finger down to $-6^{\circ}\text{C}.$ or slow cooling of the entire hand to $0^{\circ}\text{C}.$ produced no change in the blood flow of the finger if the subject was exposed to a warm environment. When however, general vasoconstrictive stimuli, such as deep respiration, startle, etc., existed, vasoconstriction in the cooled digit was more pronounced and longer than in controls, but circulation ultimately returned to baseline levels. **Copy seen:** DSG.

27924. BADIGIN, KONSTANTIN SERGEEVICH, 1910(?) - . Kak byla otkryta zemliā Grumant. (Vokrug sveta, June 1953, no. 6, p. 48-51, illus., maps) **Title tr.:** How Grumant Land was discovered.

Russian priority in the discovery of Svalbard and probable ways in which it was done, are discussed on the basis of old Russian records and maps and oceanographic argument. The edge of the drifting pack ice in Barents Sea, lay from the Kola Peninsula coast to Svalbard waters. Russian sailors and hunters in search of walrus tusks followed the edge of the ice. They reached Bjørnøya and Vestspitsbergen, it is claimed, not later than the twelfth century.

Copy seen: DLC.

27925. BADIGIN, KONSTANTIN SERGEEVICH, 1910(?) - . Pervye russkie severnye morekholdy. (Geografiā v shkole, 1953, no. 1, p. 7-13) **Title tr.:** Early Russian seamen of the North.

Contains a popular sketch of early Russian discoveries in the Arctic. Ivan Novgorodets's book of 15th century travel is noted as giving information on ice navigation, oceanography, cartography, etc., of the Arctic Ocean. All important discoveries in the Barents and western Kara Seas are stated to have been made by the end of the 15th century (Spitsbergen, Novaya Zemlya, Medvezhiy Ostrov, Vaygach, etc.) Shipbuilding was at a high level: types of vessels constructed by the "Pomors" (Russian settlers of the White Sea area) are described. The Pomors' knowledge of navigation, and the northern seas, their

NE, vocabulary, rich in marine terms, and its influence on modern ice terminology, is described.

Description of old compass and other devices for determination of direction used for navigation in arctic seas by Pomors (old name of Russian fishers, traders, etc., settled on the coasts of the White Sea and Kola Peninsula).

Copy seen: DLC.

27297. BADIGIN, KONSTANTIN SERGEEVICH, 1910(?)— . Russkie severnye morekhody; istoricheskii ocherk. Moskva, Izd-vo Molodaia gvardiia, 1953. p. 245-333. (Bound together and paged consecutively with the author's historical novel *Put' na Grumant*, p. 1-244) **Title tr.:** Russian northern navigators; ar historical sketch.

Account of Russian explorations of arctic seas from 12th to 17th century and discussion of the role played by "pomory" (Russian sailors and traders inhabiting the shores of the White and Barents Seas) in the discovery of Spitsbergen (Grumant) and other arctic islands. Deals mostly with the White and Barents Seas. The emphasis is chiefly on Russian priority in arctic discoveries and on "Western falsification" of the history of arctic exploration. The nine chapters are entitled: (1) Russian northern navigators; (2) The cradle of northern navigation [The White Sea]; (3) Sailing in the ocean: great discoveries; (4) The first arctic explorer: Ivan Amosov; (5) Ships of the northern seas; (6) Maritime law.; (7) Marine records and maps; (8) [Western] falsifiers of history; (9) The truth about the Russian "pomory".

27932. BAIRD, PATRICK DOUGLAS, 1912- , and others. Baffin Island

Expedition, 1953: a preliminary field report. (Arctic, Dec. 1953. v. 6, no. 4, p. 227-51, 13 illus., text map) *Other authors:* W. H. Ward, H. Röthlisberger, S. Orvig, B. H. Bonnlander, D. J. Kidd, H. R. Thompson, A. Watson, F. H. Schwarzenbach, J. Marmet, J. A. Thomson, and J. R. Weber.

Contains description and brief summaries of results of the second Baffin Island Expedition of the Arctic Institute of North America, May-Sept. 1953. The 13-man party carried out a program in the Penny Highland region of Cumberland Peninsula, centering on Pangnirtung Pass. Glaciological work on the Penny Icecap and Highway Glacier included studies of glacier physics, seismic work, and meteorological observations. Geological traverses were made across the peninsula and observations on bedrock geology and structure are given. Corrie formation and the geomorphology of Pangnirtung Pass were studied. Specimens of local fauna were collected and biological studies of some species were made. Comparisons of the vegetation of Penny Highland and East and North Greenland were made through extensive plant collections. Eight peaks were climbed and their altitudes determined. A list of 17 new names approved by the Canadian Board on Geographical Names is appended.

27933. BAIRD, PATRICK DOUGLAS, 1912- . Method of nourishment of an ice cap in Baffin Island. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. General Assembly, Brussels, 1951, *pub.* 1952? t. 1, p. 194-202, illus., diags., graphs, sketch maps)

Contains results of investigations made by the author and others during the Baffin Island Expedition of the Arctic Institute of North America, late May to late Aug. 1950. A camp was set up in the accumulation area on the southeast lobe of the Barnes Ice Cap (about 70° N. lat., inland from Clyde Post, central Baffin Island), transient camps established at or on the edge of the icecap and measurements of accumulation and ablation carried on. Methods are described and a chronological summary of climatic and glaciological events is given. The icecap "some 6,000 sq. km. in extent, appears to have an approximately balanced budget, and yet there is no firm on its surface. It is postulated that its

nourishment is by superimposed ice due to immediate refreezing of much of the meltwater of summer. It is further inferred that a similar process nourishes many arctic glaciers and icecaps where elevation, precipitation and temperature are all low. The name 'Baffin Type' is proposed for these in the classification of glaciers."

27937. BAKER, D. G., and E. A. SELERS. Carbohydrate metabolism in the rat exposed to low environmental temperature. (American journal of physiology, Sept. 1953. v. 174, no. 3, p. 459-61, illus.) 16 refs.

Glycogen content of the heart, liver and diaphragm and fat from the perirenal and interscapular regions of cold-acclimatized rats was lower than in controls kept at room temperature; glycogen of skeletal muscle and blood sugar levels were about equal in both groups. Following insulin, cold-acclimatized rats showed a greater drop in blood sugar, than controls. These results are believed to be effected by the elevated metabolic rate in cold-acclimatized animals, associated with increased utilization of carbohydrate.

27938. BAKHRUSHIN, SERGEÏ VLADIMIROVICH, 1882-1950. Istoricheskii ocherk zaseleniia Sibiri do poloviny 19 veka. (In: Russkoe geograficheskoe obschestvo. Komitet Severa i Severnaia kolonizatsionnaia ekspeditsiia. Ocherki po istorii kolonizatsii Severa i Sibiri, 1922. vyp. 2, p. 18-79) **Title tr.:** Historical sketch of Siberia's colonization until the middle of the 19th century.

Contains a study on Russian conquests and exploitation. The importance of the Pechora and Kama waterways in the conquest and colonization of Siberia is discussed, as are: the conquests of Ermak, the founding of Tyumen, Tobol'sk, Verkhotur'ye and other advance posts; relations with the natives (Ugrians, Tungus, and Yeniseians); Russian conquest of the natives of the Ob'; penetration beyond the Urals, to the Yenisey and Lena regions; Dezhnev's expedition; conquest of Kamchatka; Russian colonial politics and treatment of aborigines. The Russian economic interests in Siberia are dealt with: fur trade (16th century), exploitation of mineral resources (17th-18th centuries), and finally (19th century) the agricultural interests and introduction of peasant population to Siberia, immigrants and deportees. The number of population and its ethnic composition at different periods, role of the Russian church, the assimilation

process (through marriage of Russian settlers to native women), Russification and vice versa, the influence of native languages (e. g. the Yakut) and religious beliefs upon Russian settlers are investigated.

27939. BAKHRUSHIN, SERGEÏ VLADIMIROVICH, 1882-1950. Mangazelskaia mirskaia obshchina v XVII veke. (Sovetskaiia Aziia, 1929. v. 5, no. 1, p. 50-65; no. 2, p. 83-110) **Title tr.:** The Mangazeya "mir" community in the XVIIth century.

Historical survey of conditions of life and social relations in Mangazeya, the first Russian settlement in Siberia, situated near the mouth of the River Taz (near site of the present Khal'mer-Sede, 67°28' N. 78°42' E.). This town in the period 1600-1650 dominated a vast region extending as far as the Yenisey and Lena, and served as starting point for Russian expansion in Asia. Statistical data are given on population and the system of self-government peculiar to this community, with a general assembly of the Russian residents ("mir") at its head, is described. The story of the revolt of the "mir" in 1631 is related and the causes of the subsequent eclipse of Mangazeya analyzed.

Memminger, 1922. xi, 145 p., maps. **Title tr.:** The Alaska frontier; an historical, political and constitutional treatise. Authorized German edition by Erwin Volekmann.

Contains a German translation of *The Alaska frontier*, 1903 (*Arctic Bibliography*, No. 1001) with a brief foreword by the German editor. **Copy seen:** DLC.

27941. BALCH, THOMAS WILLING, 1866-1927. The arctic and antarctic regions and the law of nations. (American journal of international law, Apr. 1910, v. 4, no. 2, p. 265-75) 24 refs.

The problem of whether R. Peary's attainment of the North Pole gives to the United States any right of possession over the area is discussed. Conclusion, based on opinions of various authorities in international law, is reached that title

of possession can be established only by effective occupation, and, as far as arctic and antarctic areas cannot be effectively occupied, they shall remain no man's land.

Tungiro-Olekminskikh évenkov. (Irkutsk, U.S.S.R. Gosudarstvennyi nauchnyi muzei. Izvestiâ, 1936. t. 1 (56), p. 183-211) **Title tr.:** The non-hunting economy of the Tungiro-Olekminsk Tungus.

Contains demographic and economic sketch of an east Siberian region, inhabited chiefly by the nomad Tungus (93.8 percent), where only five Yakut and ten Russian families are settled. The total population is 794, the number of families or households, 225. Their occupation, based not on hunting but on reindeer breeding and the working of the hides, and the economic situation are described with statistical details. Based on data of 1932-33 (i. e. before collectivization). **Copy seen:** DLC.

27947. BALDWIN, DAVID, 1921- , and others. A comparison of arteriosclerotic lesions produced in young and in old rabbits by freezing the aorta. (Archives of pathology, 1950. v. 50, p. 122-31, 6 fig., 2 tables) 4 refs. Other authors: C. B. Taylor and G. M. Hass.

Contains account of a microscopic study of the degenerative and regenerative processes in the aortic wall, following freezing. Two main differences were found between old, as compared with young rabbits under similar experimental conditions: (1) limited proliferation of the intima resulting in a more limited amount of regeneration, and (2) frequent cartilage or bone formation in the adventitial connective tissue, which only rarely occurs in young animals.

Contains results of a survey made July 25-Aug. 24, 1951, in the northwestern corner of Manitoba in the Cochrane River-Reindeer Lake region and southern Nueltin Lake. Climate and physical features are summarized. The major plant communities are discussed in turn: (1) forest vegetation; (2) muskegs; (3) marshes; (4) aquatic vegetation; (5) river and lake-shore vegetation; (6) rock cliff vegetation; (7) forest-tundra ecotone; (8) vegetation of clearings and settlements; and (9) garden plants. The common species for each type are listed, and catalog of 237 species and major varieties of vascular plants is given.

27952. BALKE, B., and others. Untersuchungen zur Kälteanpassung. (Klinische Wochenschrift, 1944. Jahrg. 23, Heft 21-26, p. 204-210, 4 figs., 7 tables) 29 refs. *Other authors:* H. D. Cremer, K. Kramer, and H. Reichel. **Title tr.:** Investigations on adaptation to cold.

Contains a study on seven subjects living in tents at an elevation of 1,200 m. in the Alps, Feb. 8-Mar. 9, 1943. Basal metabolism, cold adaptation, current skin temperature, blood chemistry and the blood picture were investigated. A decrease of sensitivity to cold and of vasoconstrictive response; increases in blood circulation of the limb ends, and in blood lipids; relative lymphocytosis; no change in basal metabolism, in erythrocyte number, in free and total cholesterol, total fatty acid, iodine number; in colloid-osmotic pressure and the total serum-protein and albumin-globulin quotients, etc., were observed. On the basis of these studies, cold adaptation is considered to be a function of the central nervous system not accompanied by basic chemical changes of the blood.

27959. BANDI, HANS GEORG, and J. MARINGER. Kunst der Eiszeit. Levantekunst. Arktische Kunst. Basel, Holbein, 1952. 168 p., 216 illus. (incl. col.), map on end papers. 32 refs. **Title tr.:** Art of the ice age. Levant art. Arctic art.

Monographic study with a chapter on prehistoric arctic rock paintings and engravings (p. 143-63). The sites, purpose, style and meaning of pictures are discussed and their investigations reviewed. The pictures, made between 5000 and 1500 B. C., mostly represent northern animals (reindeer, elk and whale), also birds, reptiles and fish, seldom the human figure. The performance is naturalistic in the north, and more schematized or stylized in the south. The more important places of their discovery are: on the eastern shores of Lake Onega, Norwegian Finnmark, Bardel in northern Trøndelag, Vingen in the north of Bergen, the

White Sea coast at the mouth of the Vyg River, also in Siberia (at the confluence of the Tuba and Yenisey, and in the upper Lena region); some pictures in the arctic style were found near Oslo and Helsinki. Produced by a hunting and fishing people (no domesticated animals can be identified), the pictures evidently served magic purposes to insure luck in hunting. Affinities with late Aurignacian art are stressed. The arctic art did not come to northern Scandinavia from western Europe however; it came from the east and Siberia. Reviewed by Horst Kirchner in *Anthropos*, Ephemeris, 1953, v. 48, no. 3-4, p. 665-67. **Copy seen:** DLC.

27960. BANFIELD, ALEXANDER WILLIAM FRANCIS, 1918- . Notes on birds of Kluane Game Sanctuary, Yukon Territory. (Canadian field-naturalist, Oct.-Dec. 1953. v. 67, no. 4, p. 177-79) 2 refs.

Contains a brief summary of observations made during June 1951 in this 10,000 sq. mi. area in southwesternmost Yukon. The interior was explored by pack train, White River visited, the Haines Road traversed, and an aerial reconnaissance made over the sanctuary. An annotated list of 15 species is given. **Copy seen:** DGS.

27960A. BANFIELD, ALEXANDER WILLIAM FRANCIS, 1918- . The present status of North American caribou. (North American Wildlife Conference. 14th, Washington, D. C., 1949. Transactions, p. 477-91, maps) 30 refs.

A study based on recent literature pertaining to the distribution and status of caribou, on personal observations, data from "caribou questionnaires" distributed to northern residents of Canada by the Dept. of Mines and Resources, and on Royal Canadian Mounted Police reports. Each species or race is dealt with separately in respect to numbers; range; migrations; distribution, and frequency in specific areas; decrease or increase in numbers, etc. Direct or indirect activities of man are believed to be the main factors in the numerical decrease of the animal, viz., spread of agriculture, lumbering operations and forest fires, also in some areas, hunting. Discussion of the paper is included. **Copy seen:** DLC.

Contains two linguistic papers: 1 (p. 1-27), Mongolian-Tungusian studies, with notes by H. Winkler; and 2 (p. 28-44), On the relationship of the Ural-Altaic and Aegyptian - Semitic - Indo-European languages. **Copy seen:** DLC.

BANK, JANET FOWLER, see Bank, T. P., and others. Univ. Michigan Exped. Aleutian I. 1948-49. 1950. No. 27968.

27963. BANK, THEODORE P., II. Biological succession in the Aleutians. (Pacific science, Oct. 1943. v. 7, no. 4, p. 493-503, 5 illus. incl. map) 16 refs.

Contains a study of glacial and post-glacial plant succession in the area, correlated with anthropological data. Frequent vegetational shifts over large areas were established, usually resulting in totally new plant cover. Most of these changes are believed to have resulted from unstable soil conditions, caused by seasonal weather fluctuations. In general, conditions on the Aleutians are much less stable and more erratic than on the mainland. This state of vegetation is in sharp contrast with the Aleut culture which remained essentially unchanged for the three thousand years of its existence. The study is based on field work during four trips to the Aleutians 1948-52, in which more than 20 islands were visited. **Copy seen:** DLC.

27964. BANK, THEODORE P., II. Cultural succession in the Aleutians. (American antiquity, July 1953. v. 19, no. 1, p. 40-49, 3 illus.) 18 refs.

Contains field director's preliminary report on the University of Michigan

expedition to the Aleutian Islands in 1948-52. After a review of work previously done by others, author reports on excavations made by A. C. Spaulding and himself. Burial caves on four islands were discovered, and the most interesting material was found in two sites in the Unalaska Bay area. Short description is given of excavations and artifacts found. Detailed studies will follow. Theory on two waves of people who supposedly migrated into the Aleutians at widely separated periods is discussed.

Copy seen: DLC.

27965. BANK, THEODORE P., II. Ecology of prehistoric Aleutian village sites. (Ecology, 1953. v. 34, no. 2, p. 246-64, illus.)

Contains a summary of the results of field studies and aerial observations made in 1950-51, of prehistoric Aleutian village sites. Notes are given on Aleutian villages generally, on plant ecology (lists of most abundant species for various habitats), and plant habitats adjacent to old villages, on uses of plants by Aleuts, use of vegetation in archeological reconnaissance, and nature and cause of vegetational peculiarities on old village sites which might indicate the relative age of such sites.

Contains a summary of the summer field parties' personnel and activities, from an unpublished preliminary report by the leader, an archeologist. In addition to archeological, ethnological and anthropological studies, large plant collections were made in 1950 and 1951.

Copy seen: CaMAI; DLC.

27967. BANK, THEODORE P., II. Orchids of the tundra. (Natural history, June 1953. v. 62, no. 6, p. 278-80, illus.)

Contains a popular account of orchids in the Aleutians, as found while the author was there with the University of Michigan expedition. Descriptions are given of the more common forms, especially their flowers. The use of the tubers as food by the natives is also reported.

Copy seen: DLC.

27968. BANK, THEODORE P., II, and others. The University of Michigan Expedition to the Aleutian Islands,

1948-49. (Unpublished preliminary report to the office of Naval Research, Department of the Navy). Ann Arbor, Michigan, 1950. 220 p. illus. (incl. 14 photographs, 8 maps, sketch, diagr.) 3 tables. 41 refs. *Other authors:* A. C. Spaulding, H. A. Miller, and J. F. Bank.

This expedition, led by the senior author, lasted from June 1948 to Dec. 1, 1949. Seven members took part at various times. Adak Island was used as a base and at least 16 other islands visited, including Atka where Mr. and Mrs. Bank wintered 1948-49. The purpose of the expedition was to study the flora and plant ecology of the islands, the ethnobotany and ethnology of living and ancient Aleuts, to undertake archeological excavation of ancient village sites, and to collect material for a study of pollen, soils, and soil microbiology.

Contains a short history of the Aleuts from Russian discovery to the present, a discussion of past and present Aleut economy, health, ethnology, and names and uses of plants and animals. Phytoecological studies of ancient villages on Unnak, Adak, Atka, and Agattu were carried out, material collected for carbon-14 dating, and plant collections made on 15 islands. Archeological work was done on Agattu, Adak, Atka, and Kagamil, two village sites being excavated on Agattu and others observed, five burial caves, five rock shelters and seven other caves examined, collections taken. An ascent of Great Sitkin Volcano was made in July 1949 and botanical and geological observations noted.

Appendices: (1) report on leadership among the Aleuts; (2) economic potentialities at Atka; (3) 1949 Great Sitkin Volcano ascent, Aleutians.

Tables: Comparison of Aleut dialects: plant names (p. 69-70); Nikolski mound: phyto-ecology (p. 96-97); phyto-ecological studies, Adak - Atka ancient villages (p. 97-98).

Lists: Aleut informants with comment as to reliability (p. 52-54); Aleut alphabet (p. 67-68); edible plants (p. 75-81); medical plants (p. 85-87); stations from which plant collections were taken (p. 110); annotated list of plants collected on Agattu Island (p. 123-42).

27973. BARANOV, K. A. Mestorozhdenie vtorichnogo mirabilita v Arktike. (Priroda, 1946, no. 6, p. 59-61, illus.)

Title tr.: Occurrence of secondary mirabilite in the Arctic.

Contains a report of discovery of a layer of mirabilite in association with a salt dome on Yuryung-Tumus Peninsula in Krasnoyarskiy Kray. Three types of this mineral are described and chemical analyses given. The origin of mirabilite is attributed to precipitation of sodium nitrate from salt solution.

BARÁTOSI-BALOGH, B., see Shmits, P. Language Negidals. 1923. No. 31976.

27978. BARBEAU, CHARLES MARIUS, 1883- . Haida myths, illustrated in argillite carvings. Ottawa [1953]. ix, 417 p., 328 illus., col. maps on end papers. (Canada. National Museum. Bulletin no. 127. Anthropological ser. no. 32) 40 refs.

Contains texts of some 50 myths and photographic illus. of slate and some wood carvings with mythical motifs, made by Haida Indians of the Queen Charlotte Islands. The Haidas, long masters of wood carving in a style similar to that of Polynesian art, derived their practice and technique of slate carving shortly after 1820, from white whalers who spent their leisure carving or engraving whale's teeth or walrus tusks. The Haidas use a dark slate of fine grain, perfectly suited to carving, called argillite, of which the only known deposit is quarried on a mountain west of Skidegate. Curious as pipes, etc., were made for commercial purposes and became famous. About 1870, the argillite carvings became totemic, faunal and mythological motifs characteristic of the wood-carved totems and house posts were developed in the new medium. The need of fresh subjects to interpret in plastic form (for this lucrative trade) brought recollection of a hoard of ancient tales, which were fading from the native mind under impact of white culture. The narratives and their plastic expression, selected for this volume, are arranged in 12 chapters: Volcano or Frog Woman; Bear Mother;

Yehl, the Raven; the Thunderbird, etc. Not all the themes are of genuine Haida origin, many are international or originated in the Old World. The aesthetic quality of the argillite carvings, however, may be measured by universal standards as a great plastic art.

This is the first of the author's three projected volumes in this study, its sequels are to be *Haida carvers in argillite and their art*, and *Haida scrimshanders*.

27979. BARBEAU, CHARLES MARIUS, 1883- . The North Pacific coast, its human mosaic. (Canadian geographical journal, Mar. 1940. v. 20, no. 3, p. 143-55, 25 illus., sketch map)

Contains an account of the varied and heterogeneous elements in the "newcomer" population along the Pacific coast between Seattle and Juneau, their origin, history, occupations, traits, etc.; the influence of latter-18th and 19th century coast trade upon the native economy and culture; resultant development of symbolic totemism among coastal Indians; their production of trade goods, particularly the Haidas' and Tlingits'. The dwindling of these purely native activities, the diminishing population (e. g. Haidas from approx. 9,000 about 1830 to 800-900 in 1940), and loss of distinctive racial features, are noted as corollary to intermingling of "newcomers" with natives.

27980. BARBEAU, CHARLES MARIUS, 1883- . The Old-World dragon in America. (International Congress of Americanists. 29th, New York, 1949. Selected papers, v. 3, *Indian tribes of aboriginal America*. Chicago, 1952, p. 115-22)

Contains discussion on belief in dragons as it is manifested in folk traditions and folk art of American natives, including Tlingit, the Pacific Coast Haida, Tsimshian, and Dené (Athapaskan) in the Northwest. The dragon assumes different forms as an animal (lion), serpent, worm, or thunderbird. From Oregon as far as the Aleutian Islands the dragon and the thunderbird reign supreme among the great totems. The remote origin of the dragon concept lies in the Old World.

27981. BARBEAU, CHARLES MARIUS, 1883- . Tsimshian songs. (*In:* American Ethnographical Society. The Tsim-

shian: their arts and music, 1951, p. 97-280, text map, 75 musical examples).

Contains a selection of 75 Tsimshian songs, recorded by phonograph between 1915 and 1929, by Dr. Barbeau on the Skeena and Nass Rivers, British Columbia. The records, now in National Museum of Canada, were transcribed by him and Sir Ernest MacMillan, translations and comments made with the help of the native interpreters at the time of recording, musical analysis done by Marguerite Béclard d'Harcourt, and notation of melodies by Henri Lefebvre. Texts are given in the original language phonetically transcribed, with literal and free English translations. Extensive explanations and comments on texts and melodies in musical transcription are added. This is the only musical material on the Tsimshian so far published. Two different styles of songs are noted. The texts are no less valuable than the melodies, the themes covering a wide range: hunting invocations, medicine man's incantations, warriors' hymns, love songs, lullabies, boasting, drinking and dancing songs, etc.

27982. BARBOUR, HENRY G. The physiological effects of cold. (Connecticut State medical journal, Oct. 1941. v. 5, p. 719-20) 6 refs.

Contains general information on the therapeutic use of cold; physiological response to cold; heat and temperature regulation; hibernation; hypothermia.

Copy seen: DSG.

27983. BARBOUR, JAMES HUMPHREY, 1910- and M. H. SEEVERS. Narcosis induced by carbon dioxide at low environmental temperatures. (Journal of pharmacology and experimental therapeutics, July 1943. v. 78, p. 296-303) 16 refs.

Contains a report on experiments with sudden exposure at 5° C. to 5 percent or more CO₂; this caused in rats and dogs a reversible narcosis having characteristics of both hibernation and anesthesia, with body temperature, heart beat and respiratory rate greatly reduced. A similar, but not reversible state may be induced in rabbits by 20 percent CO₂; fasting, depressant drugs, long exposure to 10 percent CO₂ makes rats more susceptible to this narcosis, whilst acclimatization to cold or to CO₂, repeated narcotization by this method, and thyroid feeding makes them partially or

fully resistant to narcosis produced by 11 per cent CO₂ at 5° C. Low or high oxygen tension at above temperature produces somewhat similar results in rats.

Copy seen: DLC.

27984. BARCLAY, JAMES ALEXANDER and M. IBRAHIM. Cold infusion and renal function. (Journal of physiology, 1952. v. 117, p. 29P-30P)

Contains a brief report on the effects of cold (10°-20° C.) intravenous drips on the concentration of urine electrolytes. During infusion, body temperature dropped by no more than 2° C. Conditions following a subsequent warm drip are also described.

Cost of living in 1950/51 is studied on the basis of returns from questionnaires and field work; 68 family budgets of government employees in seven principal settlements are analyzed, and tabular data presented. With cost of living index at 100 for 1950/51, comparison is made with 1946/47 and with 1952/53 (index: 126), and the overall price increase shown to be about 150 percent in the six-year period.

27986. BARGER, A. N., and R. E. JOHNSON. Anaerobic glycogenolysis in the muscles of *Rana pipiens* living at low temperatures. (Journal of general physiology, July 1941. v. 24, p. 669-77) 37 refs.

Contains a report on experiments with frogs caught in spring and kept for seven to ten weeks at 4° C. without food. A considerable number had gastrocnemii that did not break down glycogen when they contracted anaerobically to exhaustion; a smaller number of these muscles did not produce lactate; the failure to break down glycogen had no relation to the glycogen content of the muscles which in some cases exceeded 500 mg. per 100 gm. of tissue.

27987. BARLOW, J. C., and E. A. SELLERS. Effect of exposure to cold on response of the rat to whole body radiation. (American journal of physiology, Jan. 1953. v. 172, no. 1, p. 147-51, illus., table) 7 refs.

Animals acclimatized to cold showed no decreased resistance to whole body irradiation with x-rays. "When rats of equal weight were irradiated, acclimatization to cold increased survivals, but when the influence of cold on the age-weight relationship was taken into account, it was found to have neither a beneficial nor an adverse effect upon survival." Exposure to cold after irradiation increased the mortality rate.

Contains a report based on work during summer, 1952, to determine whether coal deposits of the district warranted further study. The area lies at the western end of the Matanuska valley on the northern side. Topography, climate, vegetation, and stratigraphy are briefly described. Coal was found in six localities, but is believed to be more extensive and will require further subsurface exploration. Analyses of samples are given and localities described, including stratigraphic sections. Preliminary geologic map shows coal localities.

27989. BARNES, HOWARD TURNER, 1873- . Thermit and icebergs. (Franklin Institute. Journal, May 1927. v. 203, p. 611-34, illus.)

"The temperature difference between ice masses tightly bound and the same, loose and soft, is only 0.001° C. The penetrating power of the sun's rays unbinds the forces of freezing between ice crystals without melting them. This great penetration is due to the high temperature of the sun. Thermit, a mixture of Al grains and an iron oxide, which when fired produces a temperature of 2500°-3500° C. in a few sec., was used as a high temperature source in experiments on ice control. Ice decomposes into O and H as soon as direct contact with the molten iron occurs, producing a slow explosion effectively loosening and cracking ice masses. Experiments with thermit in icebergs are described. The action of the heat sets up a thermal expansion strain causing innumerable cracks and fissures through which the sun and melted ice water gain access."—SIPRE. **Copy seen:** DLC.

27990. BARNES, LOY J. A further study of the effects of centrifugation and low temperature on the development of *Fundulus heteroclitus*. (Biological bulletin, Oct. 1953. v. 105, p. 370)

Contains summary of a paper on the effects of low temperature in addition to centrifugation (studied earlier). Low temperature (4° C.) applied during the first 24 hrs. after fertilization of *Fundulus* eggs combined with centrifugation (300 and 600 g.) did not produce more duplication than centrifugation alone.

Contains a critical revision of dragonflies of the genus *Leucorhinia*, with a morphological sketch of the genus, a key to the species and varieties (p. 9-15), and a review of 11 species and some varieties and forms (p. 16-46) which includes descriptions, critical notes and discussions and sketch maps of geographic distribution. *L. dubia*, *L. rubicunda* and *L. intermedia*, native to northern regions of Europe and Asia, are dealt with among others. A general survey of distribution of dragonflies is added (p. 46-52). **Copy seen:** MH-Z.

27996. BARTENEV, VIKTOR V. Na krafnem Sëvero-Zapadnë Sibiri; ocherki Obdorskogo kraia. St.-Peterburg, 1896. 154 p. **Title tr.:** In the extreme Northwest of Siberia; sketch of the Obdorsk province.

Contains description of the daily life of the Russian and native population around Obdorsk (now Salekhard), based on observations of a four-year resident. Many details are given on natural conditions, administrative, economic, social and cultural situation in the region. The Zyryans (p. 35-51) and Samoyeds (p. 66-71), are described, then a more extensive account given of the Ostyaks (p. 71-102): their physical and mental characteristics, occupation, customs and ethics, ancient religious beliefs; their economic situation and

exploitation by merchants, drunkenness, diminishing numbers, christianization, their relations and intermarriage with Russians. What should be done to improve the natives' standard of living is discussed, together with some other problems (p. 51-66). Year-round life in Obdorsk, the large annual fair, fur trade, the situation of the workers, the importance of well-organized fishing carrels and other economic and social matters are presented.

27999. BARTLETT, D. J., and D. G. C. GRONOW. Manual dexterity and tactile sensitivity in the cold. London, R. A. F. Institute of Aviation Medicine, Nov. 1952. 20, 6 p. illus. 9 tables. Mimeographed. (Great Britain. Flying Personnel Research Committee. F. P. R. C. 806)

Contains an account of experiments and tests performed on 20 normal subjects exposed to ambient temperatures of -10° to -15° C. for one-half, one, and one-and-a-half hours in a cold chamber. Such temperatures, without wind factor

caused a drop in manual dexterity, the impairment increasing fairly rapidly during the first 20 minutes; on return to room temperature recovery was "rapid but not immediate." Under similar conditions tactile sensitivity remained relatively unaffected. Exposure to above temperatures combined with air movement was likely to produce deterioration of tactile sensitivity and further deterioration of manual dexterity.

28000. BARTLETT, R. G., Jr., and U. D. REGISTER. Effect of cold and restraint on blood and liver non-protein sulphydryl compounds. (Society for Experimental Biology and Medicine. Proceedings, Aug.-Sept. 1953. v. 83, no. 4, p. 708-709, table) 10 refs.

Contains a report on restrained and unrestrained mice exposed to cold. In the former a significant fall of liver glutathione and total non-protein sulphydryl, but not of ergothioneine, took place. In the unrestrained mice a slight fall in blood glutathione but no change of the other two substances in the blood occurred.

Copy seen: DSG.

28001. BARTLETT, R. G., and others. Effect of emotional stress, anesthesia, and death on body temperature of mice exposed to cold. (Society for Experimental Biology and Medicine. Proceedings, May 1953. v. 83, no. 1, p. 4-5, illus.) 10 refs. *Other authors:* R. H. Helmendach and V. C. Bohr.

When exposed to cold ($6^{\circ} \pm 2^{\circ}$ C.), restrained animals showed a drop of body temperature to the death point (ca. 10° C.) within an hour, while unrestrained mice experienced only a small drop in temperature. Anesthetized and dead mice showed a greater drop in temperature than restrained mice. Conditioning by keeping the animals one hour per day in restraining cages, caused a lesser temperature drop and less mortality upon cold exposure. It is concluded that emotional hypothermia can be produced in mice by the stress of confinement alone.

Kiel, Buchdruckerei Schmidt & Kaunig, 1942. xii, 174 p. 4 text-fig., 16 illus., 6 text-maps. (Kiel. Universität. Geographisches Institut. Schriften, Bd. 12) 90 refs. **Title tr.:** Fishing grounds and fisheries economy on the west coast of North America; the genesis, forms of life and settlement of a young economic area.

Contains a monograph based on a four-year study (1935-1939) of the area between lower California and the Bering Sea with two summers of this time spent investigating Alaskan conditions. A general part (p. 1-55) deals with the geography of the area; native fisheries; early white man's fisheries and the fishing industry between 1865-1895. The main section (p. 55-169) covers the recent development of the industry. Largely of a subarctic or arctic scope are the sections on salmon (p. 67-98) fisheries and industry; those of the halibut (p. 98-103); herring (p. 115-21) and cod (p. 121-22). A section comparing this area with the other great fishing regions of the globe (p. 169-71) concludes the study. **Copy seen:** NNA.

Geology has been applied extensively at the Giant Yellowknife Gold Mines, Ltd. property on the north shore of Great Slave Lake, Mackenzie District. The classical functions of the mine geologist in exploration and mine development have been extended to guide ore extraction, ensuring "clean" mining, and effectually reducing waste dilution. Geology of the deposit is described. Exploration, development and underground diamond drilling are discussed, as well as mining system selection, mining boundaries control, dilution of ore and sampling methods.

Thorium-bearing minerals have been found at 47 localities in Alaska. Twelve minerals are listed, also others which may be thorium sources. Types of deposits are noted, thorium occurrences

considered important are discussed, and the minerals described. Map shows location of occurrences.

Contains a general account and conclusions regarding surgical technique, based on 264 cases of trench foot requiring surgery in soldiers. Included are sections on pre-operative routine, surgical principles, post-operative management, complications, disposition. A prosthesis, designed as part of a shoe insert, is also described. The account is preceded by a discussion on the etiology, pathogenesis and pathology of trench foot.

28018. BAZETT, HENRY CUTHBERT, 1885- Some principles involved in treatment by heat and cold. (Medical record, Apr. 1938. v. 147, p. 301-303, 2 fig.) 3 refs.

Includes information on treatment by general cold (e. g. cold baths); treatment by cold applied locally, its physiology, and effects on bacterial growth and phagocytosis.

Copy seen: DLC.

28019. BAZETT, HENRY CUTHBERT, 1885-, and others. Temperature

changes in blood flowing in arteries and veins in man. (Journal of applied physiology, July 1948. v. 1, p. 3-19, 6 figs.) 18 refs. *Other authors:* L. Love, M. Newton, L. Eisenberg, R. Day, and R. Forster II.

Contains a report on measurements of temperature in the brachial, radial and common iliac arteries as well as in superficial veins, and the effect of cooling and heating on this temperature. The latter was found to be neither uniform nor constant even in the arteries. It varied in different vessels at any one time, and in the same vessel it was much affected by distal cooling. Temperatures as low as 21.5° C. for the radial and 31.1° C. for the brachial artery were recorded without the subject being "unduly cold," or the rectal temperature "particularly low." Temperatures of the rectum, brachial and common iliac arteries may greatly differ and change at different rates and degrees. The temperatures in superficial veins of the forearm in cold environment are the lower, the more peripheral the point of measurement. The assumption of a constant blood temperature is believed to be fictitious. *Copy seen:* DLC.

28020. BAZHANOV, V. S. Proniknovenie krysa na severnye morskoe poberezh'ia. (Priroda, 1946, no. 6, p. 72-73) *Title tr.:* The penetration of rats to the northern seacoast.

Contains report of the find of a dead black rat (*Rattus rattus*) in the village of Apuka on the Bering seacoast in 1933. Another specimen, a gray rat (*R. norvegicus caraco*), was found on the shore of Penzhina Bay. Rats were also seen in warehouses near the mouth of Penzhina River. These pests were evidently brought ashore with ships' cargo, because rats are not recorded so far north. The danger of their acclimatization in Kamchatka is discussed.

28026. BEAVER. Winter travel in the north. (Beaver, Mar. 1941. Outfit 271, p. 8-14, illus.)

"Travel in woodlands and treeless regions, dress, and food conducive to maximum comfort are described. A low-slung Eskimo komatik dog sled, 14-16 ft. long, is used east of Coppermine. The runners are of solid wood and are joined by wooden cross-pieces lashed on by sealskin line. Seven to twelve dogs, each hitched to the main draw line by a single trace, spread out fan-wise. Steel shoeing is used on the komatik in early winter, mud shoeing in mid-winter. The Alaskan type basket sled and the Nome hitch (9 dogs in pairs with a lead dog) are used in the western Arctic. The toboggan is used for travel through deep, soft snow in woods. It is drawn by five or six dogs in single file, pulling about 100 lb. each."—SIPRE.

Contains a petrographic description and chemical analyses of basic rocks (granite, gneiss, sandstone, quartzite and eruptive alkaline rocks) of Cape Turiy (66°33'N. 34°31'E.) on the southern coast of Kola Peninsula (Kandalaksha Bay), based on the investigations of the senior author in 1917, 1922 and 1924 and on literature data. Summary in German. *Copy seen:* DLC; MH-Z.

28049. BELIKOV, B. P. Issledovanie oligoklaza s poluostrova Bol'shoi Medvedok. (Akademiia nauk SSSR. Petrograficheskii institut, Trudy, 1932, v. 2, p. 97-101) *Title tr.:* Investigation of oligoclase from Bol'shoi Medvedok Peninsula.

Contains a mineralogical study of a sample of oligoclase obtained by P. A. Borisov on Bol'shoi Medvedok Peninsula (approx. 66°13'N. 33°54'E.) on Kandalaksha Bay with quantitative mineralogical and chemical analyses. Summary in German. *Copy seen:* DLC; MH-Z.

28050. BELINSKIĬ, N. A. Morskii gidrometeorologicheskie informatsii i prognozy. Leningrad, Gidrometeorologicheskoe izd-vo, 1950. 165 p. 58 illus. incl. graphs, diagrs., 12 tables. *Title tr.:* Maritime hydrometeorological information and forecasts.

"A textbook designed for use by advanced students of hydrologic forecasting based on empirical methods. The first few chapters take up in order

the origin and development of the hydrometeorological forecast service in the U.S.S.R., the role hydrometeorology plays in the national economy, information on water, wave, ice and current conditions supplied to various interests by the hydrometeorological service, forecasts issued for sea, lake, river and ice conditions, methods of preparing and disseminating forecasts, short range forecasts of swell, temperature and freezing of water bodies, long range forecasts of ice movements in seas, lakes and rivers and, finally, the purpose of routine observations."—*Meteorological abstracts & bibliography*, Feb. 1952. v. 3, no. 2, p. 106-107.

Includes section 33, "On the forecast of ice drift" (p. 122-30): discussion of results of North Pole Drifting ice-floe expedition 1937-38 and the *Sedov* drifts. Sections 36-37, "Method of long-range forecasts of ice-free periods in the White Sea" (p. 143-50): V. V. Shuleikin's theory of ice drift; N. N. Zubov's rule of direction and speed of ice drift; and K. P. Vasil'ev's and M. G. Glagoleva's studies in the 'Tsentral'nyi institut prognozov' on interdependence of atmospheric pressure gradient and wind in the air layer near the ground.

28051. BELINSKIĬ, N. A. Opyt ustanovleniia indeksa tsirkulatsii atmosfery. (U.S.S.R. Glavnoe upravlenie gidrometeorologicheskoi sluzhby. Trudy nauchno-issledovatel'skikh uchrezhdenii. Ser. V, 1946, vyp. 14, p. 3-130, diagrs., tables, maps, 22 refs.) **Title tr.:** Attempt to establish an Index of atmospheric circulation.

Includes section ("Tsirkulatsiia i ledovitost' Barentsova moria" (Circulation and ice conditions of Barents Sea), p. 68-69, which indicates that there is an inverse relationship between the intensity of air circulation and the amount of ice in Barents Sea.

Copy seen: DLC.

28052. BELITSER, V. N. Etnograficheskie raboty na Pechore. (Akademiia nauk SSSR. Institut etnografii. Kratkie soobshcheniia, 1952. t. 14, p. 22-33, 7 illus.) **Title tr.:** Ethnographic work on the Pechora River.

Contains an account by the leader, of an expedition sponsored by the Institut etnografii, to explore the Pechora, Usa and Izhma River region, July 20-Oct. 5, 1950. The four-man party studied the present-day economic and cultural life

in the Zyryan kolkhozes. The means of livelihood are reindeer breeding and hunting in the north, some agriculture, cattle- and sheep-raising in the south, also attempts to grow vegetables and potatoes. Settlements and dwellings, clothing, etc., are described and illustrated. Family organization is discussed. The growing importance of women noted, also cultural activities, clubs, choruses, theater performances, etc.

Copy seen: DLC.

28053. BELITSER, V. N. U zhiuzdinskikh komi-permianov. (Akademiia nauk SSSR. Institut etnografii. Kratkie soobshcheniia, 1952. t. 15, p. 27-38, 7 illus.) **Title tr.:** Among the Komi-Permians of the Zhiuzdinsk region.

Contains a sketch of material culture of these Zyryans in the Kama River basin (59° N., 53° E.) in the District of Korov, where the author visited in 1951. Their language, occupation (agriculture, supplemented by hunting and fishing), settlements, housing and clothing, tools and conveyances are described, as well as life in the kolkhozes, etc. Russian influence upon language and material culture seems much more advanced among the "Zhiuzdins" than among other Zyryans in their "national district."

28057. BELOMORSKO-BALTII'SKII KANAL imeni Stalina; istoriia stroitel'stva. Pod redaktsiei M. Gor'kogo, L. L. Averbakha, S. G. Firina. [Moskva] Gos. izd-vo "Istoriia fabrik i zavodov," 1934. 2 p. 1., 407, [3] p. front., illus., plates (part fold.), ports. (1 mounted), maps (part fold.), diagrs. maps on lining papers. **Title tr.:** The White Sea-Baltic Canal, named after Stalin; a history of its construction. Edited by M. Gor'kii, L. L. Averbakha, and S. G. Firin.

Contains an account by some 36 authors ("group composition") of the construction of the canal joining the White Sea with the Baltic (via Lake Vig, Onega and Ladoga); the people who built the canal, their past, and present life on the project. The builders of the canal consisted of prisoners of the G. P. U. convicted of anti-government activities, largely illiterate persons but also some engineers, merchants, etc. Much of the account is based on conversations with individuals who told of their past, the effect the work had on them, and the changes wrought by the educational and reform activities of the labor camp. The progress and difficulties of the work are also recounted, up to and including the opening of the canal. The text is preceded by a brief account of its sources, and is extensively illustrated with photographs of construction workers, terrain, etc. **Copy seen:** DLC.

*Arctic garden solar reflectors and radiators for northern climates. Fairbanks, Alaska, 1952. 7 p. illus., diagsr.

Contains notes on construction of portable solar reflecto-radiators with stable or revolving reflectors, and their position in the garden; with information on preparation of soil and growing certain flowers and vegetables. Covered beds and cold frames with solar reflectors are also briefly discussed.

Copy seen: CaMAI.

28068. BENSIN, BASIL M., 1881-

Coal dust absorbs solar heat. (Heating and ventilating, Sept. 1952. v. 49, no. 9, p. 86)

Contains "brief note experiments conducted by Dr. Basil M. Bensin at the Agricultural Experiment Station, College, Alaska. Coal dust was spread out, and by absorbing solar heat speeded up the melting snow, warmed up the soil and created convection currents of heated air near the soil's surface. Amount of coal dust needed is 2 lb. per sq. yard surface or 1000 lb. per acre. Airplanes or helicopters can be used to distribute the dust over large areas. The use of the method is of particular interest in areas, like Alaska, where the growing season is short." *Meteorological abstracts & bibliography*, Apr. 1953. v. 4, no. 4, p. 438.

28073. BERESFORD, P. C. Map projections used in polar regions. (*Institute of Navigation*, London. *Journal*, Jan. 1953. v. 6, no. 1, p. 29-37, diagsr., 4 graphs, table) ref.

Contains a review and comparison of the various projections available for the

polar regions with a view toward the adoption of a standard projection along with uniformity of presentation of topographic detail. The problems of navigation in polar regions are briefly described. The four most suitable projections are: (1) the modified lambert conformal, (2) the gauss conformal, or transverse mercator, (3) the polar stereographic, and (4) the polar equidistant. These are discussed and compared "in the light of the three main requirements of grid navigation": (1) superimposition of a rectangular grid, preferably of constant scale, (2) conformality, and (3) straight line representation of great circles. Conclusion is that the polar stereographic "appears to be slightly preferable on the ground of its strict conformality and ease of construction"; and suggestion is made that it should be adopted for arctic navigation by all air forces. **Copy seen:** DLC.

28078. BERG, GÖSTA, 1903- . Ark-tische Kulturelemente in Skandinavien. (In: Congrès International des Sciences Anthropologiques et Ethnologiques. 2d, Copenhagen, 1938. Compte rendu, 1939. p. 326-27) **Title tr.:** Elements of the arctic culture in Scandinavia.

Contains summary of an investigation of some household utensils and features of primitive economy in Sweden which can be recognized as of "arctic origin". Not all have been borrowed from the

Lapps, some features are common to all northern Europe and Asia.

Copy seen: DLC.

28079. BERG, GÖSTA, 1903-, and others. Finds of skis from prehistoric time in Swedish bogs and marshes. Stockholm, Generalstabens litografiska anstalts förlag, 1950. 158 p. 102 illus., maps, diagrs., 13 plates.

Ethnographical and archeological monograph in three parts: (1) The origin and the development of the skis throughout the ages, by G. Berg, p. 9-64; (2) Comments on the geological examination of ski finds in marshes, by G. Lundqvist, p. 65-78; and (3) Descriptions and determinations of the age of the various ski finds in Sweden, by A. Zettersten, E. Granlund and G. Lundqvist, p. 79-158.

Arctic traits in ski culture, ski types and their distribution are presented (p. 18-25). Among the 40 prehistoric ski finds in Sweden, described and investigated, the first ten specimens are from Lapland. A unique find, made in 1924 at Kalvträsk (Burträsk parish, Västerbotten), of one ski, one ski fragment and one ski stick, is estimated (from pollen analysis) to be about 3,900 years old. Parallels are found no nearer than the border regions between European and Siberian Russia. Skis with the same binding facilities have been in use among the Zyryans, Samoyeds, Chukchis, Lamuts, and Ainu. A stick of similar form is used among Ostyaks and Zyryans, also Lapps. Most numerous were finds of the so-called Bothnic type ski, and its distribution shows striking accord with the area of Lapp settlement (maps 13 and 15). The Lapp wolf chase on skis is described (p. 61), that of later times using the so-called Central Nordic or different-length type ski (p. 40-42). The snowshoe as fore-runner of the ski is investigated (p. 29-40). Methods of making skis, their use for transportation, hunting, and in military operations is discussed (p. 43-64). Map 40 shows suggested derivation of crude frame snowshoes and wooden snowshoes in Europe, Asia, and North America. Of methods of age determination of objects in peat bogs, discussed by Lundqvist (p. 65-78), pollen analysis is the most detailed. Pollen samples from the layers desired are analyzed and then compared with sequences worked out for northern Europe showing pollen

types to be expected at various levels in bogs formed since the last ice retreat. Matching the sample with the comparative level in the sequence will often give approximate dating. Various types of peat are summarized.

Copy seen: DLC.

28080. BERG, GÖSTA, 1903-. Skier und Schlittschuhe zwei nordische Bewegungsmittel. (Stuttgart. Linden-Museum. Tribus, Jahrbuch, 1952-53. Neue Folge, Bd. 2-3, p. 188-95) **Title tr.:** Ski and skate, two northern means of transportation.

Contains account of finds of prehistoric skis and skates in Scandinavia. In Nordland province of Norway, rock drawings depict men on skis; the pictures can be dated for the stone or bronze age and are similar to drawings found on the shores of the White Sea. In the moors of Sweden, 46 prehistoric skis were found, about 60 in Finland, and 12 in Norway. Three types of moor skis can be determined: the arctic, scandic, and southern. The arctic type skis found in Sweden and belonging to the bronze age are briefly described (p. 189); they were bound to the feet in a manner similar to that used by the northern Siberian peoples today. Notes on Lapp skis are given (p. 192). Skates originally were made of horse or cattle bones, they are not as old as skis and of less ethnological importance, being largely used in pastime, by the town population.

28081. BERG, GÖSTA, 1903-. Sledges and wheeled vehicles; ethnological studies from the view-point of Sweden. Stockholm, 1935. 190 p. 51 illus. and maps, 32 plates. (Stockholm, Nordiska Museet. Handlingar, no. 4) about 350 refs.

Contains a monographic study (Ph.D. thesis) on the development of means of transportation from the single-runner sledge to the wagon. In chap. 1-2 (p. 15-73) many data on the single-runner hunting sled used in Finland and among the Lapps, also on their skin-sledge and boat-sledge are given. Theories of Hatt, Sirelius and Flor on the origin of reindeer sledges are discussed. Sledges from a dug-out tree trunk are very sporadic in Europe. Some similar trough-sleds are known among the Ostyak-Samoyeds, Yurak-Samoyeds and Soyots. The Chukchis use a trough-like toboggan made of baleen. It would seem most natural,

concludes the author, to suppose the runner-sled and trough-sled to be variations of one common and very primitive basic form of great antiquity. Probably, it was diffused over all the Northern Hemisphere, and in conjunction with the skin-sled and the snowshoe, was a product of a cultural element from the remotest times. The boat-sledge of the Lapps not only indicates progress as regards solving the draught problem, but evinces an enormous advancement when contemplated side by side with the single-runner sled. Subsequent chapters deal with the built-up sledge, double-sledge for timber, cart, slide-car, wheel-sledge, and wagon.

Copy seen: DLC.

28082. BERG, HELLMUT. Wetter und Krankheiten. Bonn, H. Bouvier, 1948. iv, 140 p. diagrs. 153 refs. **Title tr.:** Weather and diseases.

An extensive study of the problem by a geophysicist. Includes sections on diseases conditioned by single, specific meteorological events ("meteorotropic diseases"); cosmic and telluric factors, such as: temperature, sunshine, air pressure, humidity, and complex factors as: air masses, their cooling and warming; (cold) fronts; storms, etc.; sunspots, cosmic radiation, etc.; pathogenic weather conditions; experimental work; the mechanism of disease conditioning by the weather.

Izvestiia, 1920, p. 273-302; cf. chap. 8 of his *Klimat i zhizn'*, 1947 (*Arctic Bibliography*, No. 1386). **Title tr.:** Bi-polar distribution of organisms and the glacial epoch.

Contains data on the bi-polar distribution of marine mammals and fishes, discussion of the causes of this phenomenon, geological data, northern types in the tropical fauna and flora, terrestrial animals and plants of bi-polar distribution. It is stressed in conclusion that the cause of the bi-polar distribution is the cooling of the tropical zone in the glacial epoch. This gave opportunity to boreal (not arctic) elements to cross the equator and penetrate into the Southern Hemisphere.

28084. BERG, LEV SEMENOVICH, 1876-1950. Iarovye i ozimye rasy u prokhodnykh ryb. (*In:* Ocherki po ikhtiologii, 1953, p. 242-60) 35 refs. *Originally pub. in:* Akademika nauk SSSR. Izvestiia. Otdelenie matematicheskikh i estestvennykh nauk, Ser. 7. 1934, no. 5, p. 711-32. **Title tr.:** Summer and winter races of anadromous fishes.

Contains a study of seasonal races of fishes analogous to those known in agricultural crops. Fishes of various families (Salmonidae, Acipenseridae, Cyprinidae, Percidae and Petromyzonidae) which ascend rivers to breed are described, partly on the basis of material (salmon) from the rivers of the Kola Peninsula and Arkhangel'sk province and from the White and Barents Sea. Data are given on their biology and ecology. The possibility of changing winter races into summer and vice versa is discussed. The author is of the opinion that racial differences are not stable in fishes just as they are not in the grain crops.

Vernadskomu k piatidesiatiletiu nauchnoi i pedagogicheskoi deiatel'nosti, 1936, p. 1163-68. **Title tr.:** On periodicity in propagation and distribution of fishes.

*Contains results of study of periodical fluctuations in fish catches (chiefly of the salmon, *Salmo salar*) in the White and Barents Seas. It is concluded that the maxima in propagation (over approx. ten years) are not identified with any individual sea, but represent a general tendency, and are accompanied by a wider distribution. With the warming up of the climate in the Arctic, the amount of fishes in its seas is increasing and they expand steadily northward notwithstanding some periodic retreats.*

(*In:* Ocherki po ikhtiologii, 1953, p. 7-18) 41 refs. *Originally pub. in:* Vsesoiuznoe geograficheskoe obshchestvo. Izvestiia, 1934. t. 66, vyp. 1, p. 69-78. cf. chap. 7 in his *Klimat i zhizn'*, 1947 (*Arctic Bibliography*, No. 1386). **Title tr.:** On the amphiboreal distribution of marine fauna in the Northern Hemisphere.

Contains notes on various marine animals (fishes, molluscs, echinoderms, crustaceans, etc.) now common to the western and eastern section of the boreal zone, but absent from all or many of the seas north of the U.S.S.R. An attempt is made to explain this by the exchange of the fauna of the northern Atlantic and Pacific Oceans during the Pliocene period, and by the later cooling of the climate which caused the extermination of many boreal forms in the arctic seas.

28103. BERNATZIK, HUGO ADOLF, 1897-. Lapland. London, Constable & Co. Ltd., 1937. xvi, 136 p. 90 illus. on plates, map. Issued in the U. S. as *Overland with the nomad Lapps*, New York, R. M. McBride & Co., 1938; originally

published in German as *Lapland*, Leipzig, Bibliographisches Institut, 1935, 132 p., 90 illus., map; and translated into English by Vivian Ogilvie.

Contains an account of a journey made in 1934 by the author and his wife to the Jokkmokk and Karesuando Lapps in Sweden. The mountain Lapps of Jokkmokk are genuine reindeer nomads, and those of Karesuando considerably touched by civilization. Many interesting details are given on the life of the nomad Lapps and their reindeer herding; life stories are related of several individuals and psychological characteristics noted. The beautiful photographic illus. have considerable ethnographic value, many showing Lapp dwellings, racial types, clothing and handicrafts of the people. A general orientation on the Lapps and their culture is given in the introduction, and several Lapp tales are appended about the giant Stalo, the maiden Ulida, and their herds, of Lapps in conflict with Chuds and Swedes, etc.

Contains diagnoses of eight new species of beetles from various palaearctic regions, including *Atheta (Oreostiba) wuorentausi* n. sp., collected by Y. Wuorentaus at Bol'sheretsk on Kamchatka Peninsula on June 27, 1917. *Copy seen:* MH-Z.

28106. BERRY, A. E. The pollution problem in Ontario. (Canadian journal of public health, Aug. 1950. v. 41, no. 8, p. 327-31)

Contains an outline of legislation regarding the uses of water courses and the

responsibilities of public and private bodies in protecting them; objectives of the Dept. of Health and achievements, especially in sewage disposal, aims of stream sanitation, etc.

Copy seen: DSG.

28107. BERRY, FREDERIC AROYCE, 1906-, and others. Arctic weather maps. [Washington, 1951] 103 p. incl. 96 p. maps. (U. S. Navy Dept. Bureau of Aeronautics. Project TED-UNL-MA-501, AROWA) Other authors: G. V. Owens and H. P. Wilson.

"The illustrative synoptic weather maps are grouped according to the seasons. Climatic and orographic reference charts and 8-yr. mean track charts of low and high pressure centers are presented in each group. The fluctuations of the ice pack are briefly discussed. Open water in the Arctic Ocean reaches its maximum at the end of Aug. varying from 10 percent at the center to 30 percent at the edge of the pack. Pools of water on the ice floes provide moisture for evaporation. Open water between floes in the arctic pack begins to freeze in Sept., reaching a thickness of 1 ft. 30 days later in wind protected areas. The coastal seas and larger lake areas near the Arctic Circle freeze outward or southward from the shores, but have large open-water areas until mid-Dec. Hudson Bay freezes over at the end of Dec. and the arctic ice pack reaches a maximum area in March. New ice is 4-ft. thick by Jan. and reaches its maximum thickness in June when the upward conduction of heat through the ice is at a minimum. Insulation increases sharply from April to June. The Arctic Ocean area warms up slowly because of the reflectivity of the ice, and the ice retreats slowly northward until late July or Aug."—SIPRE. *Copy seen:* DWB.

BERRIDGE, FRANCIS RICHARD, see Glaser, E. M., and others. Effects heat & cold on distrib. blood. 1950. No. 29287.

28108. BERSON, ROBERT C., 1912-, and R. J. ANGELUCCI. Trench foot. (Army medical bulletin, June 1944. no. 77, p. 91-99, table) 11 refs.

Contains an account of some fundamental investigations on the effects of cold on tissues; the critical temperature for cooling cells, tissues and organisms, and the clinical aspect of trench foot. This general part is followed by an

analysis of 144 cases among military personnel, with information on treatment, fitness for duty, etc. Four severe and four mild cases were treated unilaterally with dry cold, the other extremity being exposed to room temperature. No definite conclusion is drawn except that the cooling had a marked analgesic effect and "did no appreciable harm", even in severe cases.

28116. BESSELS, EMIL, 1847-1888. Einige Worte über die Inuit (Eskimo) des Smith-Sundes, nebst Bemerkungen über Inuit-Schädel. (Archiv für Anthropologie, 1875. Bd. 8, p. 107-122, 3 plates) **Title tr.:** A few words on the Inuit (Eskimo) of Smith Sound, together with remarks on the Inuit skull.

Contains notes on the material culture and family life of the Polar Eskimos living in the Smith Sound region of northwest Greenland, based on investigations made by John Ross in 1818; and a more extensive description of the Ita (i. e. Etah) tribe of about 100 persons, nomadizing between Cape York and 79° N. lat., investigated by the author who spent the winter of 1873 among them (he was chief scientist on the U. S. Arctic Exploring Expedition on the *Polaris* 1871-73 under Capt. Hall). Details given on the Etah Eskimos include their physical appearance, clothing and housing, material culture, family life, customs, etc. As the author's anthropological measurements of the Etah Eskimos were lost due to a travel accident, he gives instead, description and measurements of 100 Eskimo skulls from northwestern Greenland, 96 of which were brought home by the Hayes Expedition in 1861. The Eskimo measurements are compared with those of 15 Aleut skulls, found by Dall in a cavern at Nazan Bay, Atka Island. **Copy seen:** DLC.

28117. BETCHER, ALBERT MAXWELL, 1911-, and others. Continuous procaine block of paravertebral sympathetic ganglions. (American Medical Association. Journal, Jan. 24, 1953. v. 151, no. 4, p. 288-92, tables) 22 refs. Other authors: George Bean and D. F. Casten.

Contains description of a method of continuous paravertebral procaine ganglionic block and its effect in 100 patients including such with frostbite. Advantages of the method are discussed and its application critically evaluated.

Contains a report on the effect of mass undernourishment on resistance to the adverse effects of cold, with discussion on: the increase of caloric intake with cold; the need for increased rations in cold areas and periods; requirements in carbohydrates (bread, sugar), fats

and proteins; the problem of tuberculous patients; etc. *Copy seen:* DLC.

28121. BEZEMER, KAREL WILLEM LEONARD. The fate of the medieval Norse colonists in Greenland. (K. Nederlandsch Aardrijkskundig Genootschap. Tijdschrift, Oct. 1953. v. 70, no. 4, p. 507-10) 11 refs.

Contains a review of theories concerning the extinction of the Norse colonies in Greenland during the 14th and 15th centuries, with comments upon an article by P. Verhoog, q. v., who suggested food scarcity due to the known climatic deterioration of the period, as its cause. Other theories presented include those of extermination (the Norsemen slain by the Eskimos), and assimilation (a Norse-Eskimo intermingling resulting in the disappearance of the Norse culture). The latter theory, which was proposed by Nansen and supported by Stefansson and Teal, the author believes correct, pointing out that deterioration of the climate would have forced the Norsemen to adopt the Eskimo way of life. Verhoog's explanation of the 14th-15th century climatic deterioration is also questioned in the light of recent knowledge of climatic fluctuations in the Greenland region. *Copy seen:* DLC.

28122. BIANCHI, GIORGIO. Il blocco simpatico periarterioso nella cura precoce dei congelamenti; nota preventiva. (Sperimentale, Oct. 1942. v. 96, fasc. 7, p. 530-38) *Title tr.:* Periarterial sympathetic block in the early treatment of frostbite; advance note.

Contains a report based on 292 casualties suffered by an Italian division on the Russian front in the winter of 1941-42. Includes clinical observations, degrees of injuries and their frequency in these cases, and a presentation of the therapy and its results. *Copy seen:* DSG.

28123. BIANKI, VALENTIN L'VOVICH, 1857-1920. Ptitsy (Aves) t. 1, vyp. 1-2. Colymbiformes i Procellariiformes. S.-Peterburg, 1911-13. pt. 1: 384p., plates 1-7; pt. 2: p. 385-979, 4, xxxviii, plates 8-10. (In: Fauna SSSR. Aves t. 1, vyp. 1-2) *Title tr.:* Birds. Colymbiformes and Procellariiformes.

Contains an introductory section (in pt. 2, pub. 1913, p. i-xxxviii) providing a zoogeographic division of the world, ornithological glossary, index of Russian and Latin names, and a systematic subdivision of the class Aves. The systematic

section (pt. 1-2, p. 1-947) gives keys to the suborders, families, genera and species of the orders Colymbiformes and Procellariiformes, and descriptions of all known Russian species, with synonyms, list of faunistic literature for each species (200-300 items), list of illustrations and of specimens in the Zoological Museum of the Russian Academy of Sciences, Latin diagnoses, descriptions, data on geographic distribution in Russia and other countries, also notes on ecology and biology. Many species native to northern regions are included in this work. An index of local Russian and native names is appended (p. 948-77).

28133. BILLINGS, CARL HENRY. Protecting underground utilities located in arctic regions. (Water & sewage works, Nov. 1953. v. 100, no. 11, p. 441-47, 13 illus.) 7 refs.

Based on experience of U. S. Army Corps of Engineers' construction operations in Alaska. The country is divided into three climatic sections, that north of

the Alaska Range, "arctic", underlain by permafrost.

"The mechanics of permafrost are explained in terms of heat flow into and out of the ground during the freezing and thawing seasons, and the thermal conductivity values of ice and water. The effect of local thawing on underground structures depends on the character of the ground and its moisture content. The thawing of ice lenses in clay, silts, and loams causes cave-ins; the thawing of well-drained granular soils and frozen bedrock has no effect. Waste steam from turbines is distributed to buildings to be heated by means of underground pipes. Other utilities are protected by constructing underground conduits large enough to carry all the utilities. The heat given off by the steam mains is sufficient to maintain the utilidors well above freezing. The two types of recirculation systems for preventing water system freezing are described. Standard methods of venting sewer systems permit too much heat loss. Laminar flow is preferable in arctic sewers."—SIPRE.

28134. BINDER, HARTWIG. Die Eskimo. (Erdball, 1928. Jahrg. 2, no. 4, p. 134-37, 3 illus. on plates 34-35) *Title tr.:* The Eskimos.

Contains a popular account of Eskimo life: their conquest of nature, their inventions (kayak, snowhouse); work of men and women; psychology, etc.

Copy seen: DSG.

28135. BING H. L., and ARNE P. SKOUBY. Sensitization of cold receptors by substances with acetylcholine effect. (Acta physiologica Scandinavica, Nov. 10, 1950. v. 21, p. 286-302, illus., tables) 10 refs.

Contains an investigation on the influence of increased acetylcholine content of the skin on the number of reacting cold spots; acetyl-beta-methylcholine, atropine, prostigmine, adrenaline, etc. were also included in the study. The results suggested that the cold spots are probably regulated by changes in active acetylcholine content of the skin. Ergotamine hydergine or dibenamine had no effect on the number of reacting cold spots.

BIOZZI, G., see Halpern, B. N., and others. Influence du refroidissement. 1951. No. 29532.

28138. BIRD, JOHN BRIAN. The glaciation of central Keewatin, Northwest Territories, Canada. (American journal of science, Mar. 1953. v. 251, no. 3, p. 215-30, 2 text maps (1 fold.)) 18 refs.

Contains a study of ice movements in part of the Back-Thelon-Dubawnt River drainage basins of central Keewatin, and a summary of postglacial events. Evidence was collected from records of former explorations, field work by the writer in the Thelon basin in summer 1948, and from aerial photographs and maps. "Glacial striae and drumlinoids show that there were at least three distinct ice movements in central Keewatin during the Wisconsin glaciation," the last two probably originating in the Hudson Bay region. The last ice lobe blocked the drainage of the ice-free area west of it, producing a large proglacial lake in the Thelon-Dubawnt basin, extending west from Aberdeen Lake and north probably to the Back-Thelon watershed. Raised strandlines show that the highest elevation of the lake was 800 ft. and that it fell by stages to 360 ft. as the ice waned,

after which the sea invaded the area. A second series of strandlines below 360 ft. shows the rise of the land to its present level and the eastward retreat of the sea.

28139. BIRD, JOHN BRIAN. Southampton Island. Ottawa, Queen's Printer, 1953. 84 p. illus. 20 maps (1 fold.). (Canada. Geographical Branch. Memoir 1) 35 refs.

Contains a summary of observations made by the author's four-man party from the Canadian Geographical Branch in summer 1950, and of those made by earlier explorers, traders, scientists, and natives. The geology and physiography of the island are summarized, description given of forms left by continental glaciation and post-glacial marine submergence, and notes on geomorphic processes under present periglacial conditions. The northeastern third of the island belongs to the Precambrian Canadian Shield, while the southwestern two-thirds is composed of Paleozoic sedimentary rocks of the Hudson Bay Lowlands. These and smaller physiographic divisions are discussed.

The Sadlermiut Eskimos, "believed to have been the last surviving Canadian Eskimos whose culture was closely related to the once widespread North American Arctic Thule culture," became extinct in 1902-1903. Present Eskimos are the Aiviliks brought from the Repulse - Wager Bay areas by whalers about 1908. Native settlements before 1903, native and white settlements after 1903, and migration routes by which the original Eskimos came to the island following the last ice age are discussed. Sea resources (and ice conditions), land resources, and various prehistoric settlements are discussed.

The Chugach Eskimo. København, 1953. ix, 262 p. 41 illus., map. (Copenhagen. National-museet. Skrifter. Ethnografisk række, 6) about 400 refs.

Ethnological monograph based on field work in 1933, and study (in Museum für Völkerkunde, Berlin, 1935), of J. A. Jacobsen's collection of 1883. The expedition of the author and Dr. F. de Laguna (termed the First Danish-American Expedition) to the Prince William Sound region, south Alaska, is outlined and the native informants characterized. The Chugach territory (59°46'-61°16' N. 145°37'-148°43' W.) and its inhabitants are described: discovery, ethnological exploration, climate, plant and animal life, native tribes (eight Eskimo groups). The economic life is described and illustrated in detail: sea and land-mammal hunting and fishing, food gathering and preparation; means of travel, the dwelling and its utensils; clothing and personal adornments, manufactures and decorative art. Social life is outlined: the family and kinship, rearing of children, secret societies, customary law, intertribal relations, pastimes, festivals, etc. Intellectual culture is sketched in regard to time division, weather lore, treatment of disease, taboo and magic, view of the universe, the soul, spirits and fabulous beings, shamanism, influence of Christianity. Folklore material is presented (texts in English). Finally analysis is made of the elements of Chugach culture (p. 176-234). It is essentially an Eskimo culture based upon both Paleo- and Neo-Eskimo foundations, but highly modified by foreign influences, some of which spread from the interior of Alaska and others directly from Asia, the majority from the Northwest Coast of America. The circumpacific and northwest American elements are of paramount importance in setting this culture apart from the typical Eskimo pattern. *Appendices* give (1) grammatical notes and extensive English-Chugach vocabulary (p. 235-48); (2) a list of plants collected in Prince William Sound and determined by Johs. Grøntved and Eric Hultén (p. 248-51).

Danish activities in Eskimo research since 1940. (International Congress of Americanists. 28th, Paris, 1947. Actes. Paris, 1948. p. 231-36) 16 refs.

Contains report of Danish work on Eskimos after the outbreak of war, as purely literary and mostly confined to the working up of material collected previously, except for H. Larsen's expedition to Alaska, started in 1939. The German-established Institute of Arctic Research in Copenhagen during the occupation, the Danes' non-cooperation and counter-establishment of Societas Arctica Scandinavica with a new periodical, *Acta Arctica*, are noted. Published works and those in progress, plans for new expeditions to Greenland and Alaska, ethnological questionnaires for Greenland, etc., are briefly reviewed. *Copy seen:* DLC.

28143. BIRKET-SMITH, KAJ, 1893-
A geographic study of the early history of the Algonquian Indians. (Internationales Archiv für Ethnographie, 1918. Bd. 24, no. 5-6, p. 174-222)

Contains a study on the wide diffusion of the Algonkian Indians who occupy a large area from Labrador to North Carolina, and represent three culture stages. Those living in Labrador and around the Hudson Bay belong to the stage of elk and reindeer hunters. Description is given of natural conditions in these regions: climate, vegetation and wildlife; population (distribution of tribes); sketch of their civilization: hunting in winter and summer, also fishing, use of the tent, snowshoe, toboggan, canoe; influence of nature upon their life habit, their relations with Eskimos; the forest, rivers, etc. (p. 176-86). Then follow accounts of the tillage stage and bison-hunting stage. The author finds five types of Algonkian culture, his classification is based on the hunting and fishing techniques, three of which are used by the reindeer and elk hunters. Accordingly three of his types are found in the arctic or sub-arctic zone (p. 213).

28145. BIRKET-SMITH, KAJ, 1893- . Present status of the Eskimo problem. (International Congress of Americanists. 29th, New York, 1949. Selected papers, v. 3, *Indian tribes of aboriginal America*. Chicago, 1952. p. 8-18)

Contains a summarizing review on Eskimo culture, its origin and development. Historical relationship between different Eskimo cultures is discussed. Characterizations of Paleo-Eskimo, Neo-Eskimo, and Eschato-Eskimo cultural stages are given. Critical approach is used toward anthropological investigation of Eskimos. Considerable anthropological and linguistic differences between Aleuts and Kodiak Islanders on the one hand, and the rest of the Eskimos on the other, are stressed. Discussion by F. de Laguna is appended (p. 18-21).

28156. BJÖRKLÖF, AXEL. Vid Vita havet, i Murmansk och Waranger. (Terra, 1920. v. 32, p. 99-106) **Title tr.:** By the White Sea, in Murmansk and Varanger.

The author advocates the union of the Pechenga (Petsamo) district with Finland. Such a union would be welcomed by the largely Finnish population and would benefit the district economically. He tells of his visits during 1916-1919 to Murmansk, Vardø, and a number of towns along the White Sea, including Kandalaksha (67°10' N., 32°25' E.), where he studied the fishing methods used. Life along the Murman Coast from the Norwegian border to Kola Bay, with about 2000 Finnish settlers, is described.

28157. BLACK, ROBERT FOSTER. 1918-. Growth of ice-wedge polygons in permafrost near Barrow, Alaska. (Geological Society of America. Bulletin, Dec. 1952. v. 63, no. 12, pt. 2, p. 1235-36)

Contains abstract of a paper presented at the Nov. 1952 meeting of the Society, Boston, Mass. Measurements of thermal contraction and rate of growth of ice-wedge polygons made during winter 1949-50 support Leffingwell's contraction hypothesis. Methods and results are briefly discussed. Age of the coastal plain at Barrow is estimated at 1000 years in younger and 3500 years in older areas.

28159. BLACK, ROBERT FOSTER, 1918- . Permafrost, a review. (New York Academy of Sciences. Transactions, Mar. 1953. ser. 2, v. 15, p. 126-31, table, map)

"About 24 percent of the total land area of the earth is in areas of permafrost. The relative age, type, and proximity of permafrost to the surface are correlative with vegetation and drainage. Thickest in the continuous zone of permafrost that has not been glaciated, permafrost reaches a maximum depth of 2000 ft. at Nordvik (northern Siberia). Average thickness in the continuous zone is 800-1200 ft. in Alaska, and 1000-1500 ft. in northern Siberia; in the discontinuous zone in Alaska, 200-400 ft.; in the sporadic zone in Alaska, less than 100 ft. Permafrost is several thousands ft. thick in Greenland and Antarctica icecaps. Temperatures at 30-50 ft. depth are below -5°C in the continuous zone, from -1° to -5°C in the discontinuous zone, and above -1°C in the sporadic zone. Methods of distinguishing supersaturated, saturated, and undersaturated permafrost material in the field with the aid of a hand lens are given. Ice is an important component of permafrost. Individual crystals in ground

ice range from 0.001-70 cm. Ice wedges in the continuous zone of permafrost vary from less than 1 mm. in width to more than 25 ft. in width and length. These wedges join in polygonal networks. Petrofabric studies of ice wedges are discussed."—SIPRE. *Copy seen:* DLC.

28161. BLACKWOOD, WILLIAM, Jr. and H. RUSSELL. Experiments in the study of immersion foot. (Edinburgh medical journal, July 1943. v. 50, no. 7, p. 385-98, 18 fig. on 3 plates, table) 14 refs.

*Contains a histological study of tails of rats exposed to moderate cold (3° - 4°C) and wet, with some experiments on treatment. After 48 or more hours' exposure, conspicuous damage was observed to nerve and muscle, which did not return to normal after two months. Skin, blood vessels and other tissues were more resistant. No histological differences were found between rapidly and slowly rewarmed cases. Abstracted by J. R. Learmonth in *Bulletin of war medicine*, Dec. 1943, v. 4, no. 4, p. 198-99.*

Copy seen: DSG.

28162. BLACKWOOD, WILLIAM, Jr., and H. RUSSELL. Further experiments in the study of immersion foot. (Edinburgh medical journal, May 1945. v. 52, no. 5, p. 160-65, 11 fig., table) 4 refs.

Contains report on microscopic-pathological changes observed in tails of rats 90 or 360 days after exposure to moderate cold and wet. As in the earlier investigation reported in the authors' Experiments . . . immersion foot, q. v., the neuro-muscular apparatus was most severely injured, with the nerves showing signs of regeneration. There was marked individual variation in muscle damage, correlated with reinnervation. Ab-

strated by W. Blackwood in *Bulletin of war medicine*, Oct. 1945. v. 6, no. 2, p. 69. **Copy seen:** DSG.

28163. BLACKWOOD, WILLIAM, Jr. Injury from exposure to low temperature: pathology. (British medical bulletin, 1944. v. 2, no. 7, p. 138-41, 15 illus.) 11 refs.

Article summarizing recent work and notions on: the differences in injury caused by various degrees of cold; immersion foot, its etiology and pathology in man and experimental animals; frostbite, its causes and pathology.

Copy seen: DSG.

28164. BLACKWOOD, WILLIAM, Jr. Studies in the pathology of human "immersion foot." (British journal of surgery, Apr. 1944. v. 31, no. 124, p. 329-50, fig. 290-350 (2 col.)) 14 refs.

Contains a histological study of material from 14 cases of severe cold immersion, with brief clinical notes. Damage was found in all tissues, the most severe one in nerves and muscle. Material from early survivors was not available. There was evidence of restoration to normal in tissues not killed by the initial trauma. Numerous photographs (some in color) of gross and microscopic findings accompany the test. Abstracted in *Bulletin of war medicine*, Aug. 1944. v. 4, no. 12, p. 702-703. **Copy seen:** DSG.

"The Lena-Vilyuy plain is located in a permafrost region. The climate of Tyung River basin (Vilyuy tributary) is colder than the Yakutsk region. The depth of the upper boundary of permafrost was measured in summer in many parts of this region. The depth of frozen ground in the southeast ranged from 2 m. in sandy soil to 1-1.5 m. in clayey soil; frozen ground occurred at 1.0-1.1 m. in the western part. The minimum depth of permafrost (20-30 cm.) was observed in forested areas under a soil surface covered by moss. The dependence of permafrost depth on the aspect of the slopes was noted for many points. A summer depth of permafrost of 60-65 cm. on ridges increased to 85 cm. on southern slopes and decreased to 45 cm. on northern slopes."—SIPRE. **Copy seen:** DLC.

28167. BLAGOVIDOV, N. L. Pochvy Tiungskogo basseina. (Akademiia nauk SSSR. Sovet po izucheniiu proizvoditel'nykh sil. Trudy. Seriia ikutskaiia, 1935. vyp. 18, p. 66-128, tables, map) **Title tr.:** The soils of the Tyung basin.

"A detailed description of the soil types and their physico-chemical properties is presented. The depth of the permafrost layer for each sample is noted. The soils of the area have an insignificant formation of ortstein which might be effected by permafrost."—SIPRE. The Tyung is a left tributary (63°46'N. 121°30'E.) of the Vilyuy in the Lena River system. **Copy seen:** DLC.

Describes three land masses north of the United States from which inter-continent flights could leave—Greenland, Northwest Territories, and Alaska. Considers clothing, rations, and emergency supplies for arctic flying, and discusses in more detail cold-weather starting and operation of airplane engines.

Copy seen: DLC.

28177. BLOCK, MATTHEW. Genesis of the gangrenous and reparative processes in trench foot. (Archives of pathology, July 1948. v. 46, p. 1-34, 31 fig.) 80 refs.

Contains a microscopic-pathologic study of amputated specimens from ten men with severe trench foot. Three zones were usually found in the material: gangrene, demarcation, and reaction area. The major change, and probably cause, of gangrene found, was excessive dilatation and occlusion of the blood vessels. The reaction zone showed evidence of intense reparative activity: the cellular structure of the corium of this zone, especially of the subpapillary layer is analyzed in detail, being an important factor in epithelization. The demarcation zone consisted of degenerated leucocytes and cut through all kinds of tissue layers or vessels; it adhered more closely to the gangrenous zone.

28193. BOAS, FRANZ, 1858-1942. Grammatical notes on the language of the Tlingit Indians. Philadelphia, University Museum, 1917. 179 p., fold. plate. (Pennsylvania. University. University Museum. Anthropological publications. v. 8, no. 1)

Contains a sketch of Tlingit grammar (chapters on phonetics and morphology), and a vocabulary with Tlingit-English and English-Tlingit. One text (tale on origin of mosquitoes) in phonetic transcription with literal and free translation is added. The material was obtained from Louis Shotridge q. v., a native Chilkat, who spent six weeks with Boas in New York during the winter of 1914-15 and acted as a native speaker; also from Dr. J. R. Swanton's *Tlingit myths and texts*, 1909 (*Arctic Bibliography*, No. 17336). **Copy seen:** DLC.

28194. BOAS, FRANZ, 1858-1942. Migrations of Asiatic races and cultures to North America. (Scientific monthly, Feb. 1929. v. 29, p. 110-21)

Contains condensed discussion on the whole rather complicated problem; au-

thor's principal points of view are: (1) the differentiation of the Mongoloid American race must have occurred before man came to America; (2) positive evidence is still lacking of man's arrival before the end of the great glaciation that separated America from the Old World; (3) it is not likely that the migration occurred just once, but may have been a continuous process over a long period; (4) it is impossible to trace the origin of American languages to Siberia or vice versa, although a number of peculiar features are common to both the Chukchi and Eskimo languages; (5) the fundamental unity of the culture of the circumpolar area of both the New and the Old Worlds must be recognized: the domestication of the dog, use of birch-bark, similar construction of houses, the typical flat drum, etc.; similarities in religious ceremonials, beliefs and traditions prove an intimate relation between Asia and America, also strong proof of cultural relations is found in the folk traditions of the various tribes; (6) intensive study of Chukchi and Eskimo cultural features might be greatly helpful towards solving the problem; (7) migration across Bering Strait moved back and forth.

28195. BOAS, FRANZ, 1858-1942. Zur Anthropologie der nordamerikanischen Indianer. (Zeitschrift für Ethnologie, 1895. Bd. 27, p. 266-411, 21 text tables, 14 curves) **Title tr.:** On the anthropology of the North American Indians.

Contains summary of an extensive anthropometric survey: six body measurements and six of head and face were taken; observations were made on forms of nose, ear, eyes, and pigmentation. Data are given on (among others) Cree Indians (58 individuals), Indians from the coast of British Columbia (69), Alaskan Eskimos (34), and Labrador Eskimos (26). The data are evaluated in special chapters on height, length-width index of head, and width of face. Average values, percentages, comparisons between different groups, contrast of racially "pure" and cross-bred people, etc. are given. Diagrams and curves illustrate the statistical material.

28199. BOBRINSKOĬ, NIKOLAI ALEK-SEEVICH, 1890-, Editor, and others. *Opredeletel' mlekopitaushchikh SSSR*. Moskva, Sovetskaya nauka, 1944. 439 p. 256 illus., 62 maps, 32 plates. Other authors: B. A. Kuznetsov and A. P. Kuznetsov. **Title tr.:** A key to the mammals of the U.S.S.R.

Contains a key for determination of mammals, including such largely arctic groups as the seals and walrus (p. 162-79), and whales (p. 180-217), as well as numerous individual forms inhabiting the Russian Arctic. Appended are 62 maps of geographical distribution of the more common forms, about half the maps dealing with animals occurring in the North (arctic fox, arctic hare, polar bear, weasel, reindeer, lemming, etc.). The extensive bibliography is arranged according to geographical areas, including the far North (p. 363), Siberia (p. 367-68).

28200. BOCH, S. G. *Eshche neskol'ko zamechanii o prirode snegovoi erozii*. (Vsesoiuznoe geograficheskoe obshchestvo. Izvestiia, 1948, t. 80, p. 609-11, diagr.) 9 refs. **Title tr.:** Some further remarks on the nature of snow erosion.

Contains discussion of the hypothetical action of snowfields (nivation) as a factor of erosion in the mountains of the Polar Ural, based on author's observations in the Voykar River basin, Aug. 1946. "Meltwater from snowfields alternately freezes and thaws with daily temperature fluctuations. The consequent expansion between layers of rock disintegrates the larger rock formations. Some of the rocks and soil are carried away in streams by the meltwater; some seeps into soil. The saturated, pasty mass of soil moves downslope forming solifluction slopes and antiplanation terraces. The erosion of soil underneath the snowfield is insignificant and uniformly distributed. The maximum erosion takes place down slope from snowfields with subsequent change in topography."—SIPRE. This paper supplements *Arctic Bibliography*, No. 1787, and the author's *Snezhniki i snezhnaya eroziia*, 1946, q. v.

28201. BOCH, S. G. O nakhozhenii vechnoi merzloty na Severnom Urale.

(Priroda, 1938. t. 27, no. 5, p. 80-84, illus. maps) 7 refs. **Title tr.:** Permafrost in the northern Urals.

"A relatively continuous shelf of permafrost, 1.6-4 m. thick, was found in the Urals north of 64° N. lat., and it contained small islands of thawed ground on exposed and drained sandy areas. Occasional islands of permafrost were encountered south of 64° N. along the upper reaches of the Shchugor and Ilych Rivers. Solifluctional terraces, attributed to permafrost were found along the western slopes of Nerofka Mt. Permafrost degradation was slow due to extensive snowdrifting and deep frost penetration."—SIPRE.

28202. BOCH, S. G. *Snezhniki i snezhnaya eroziia v severnykh chastakh Urala*. (Vsesoiuznoe geograficheskoe obshchestvo. Izvestiia, 1946, t. 78, no. 2, p. 207-222, illus., diagr.) 26 refs. **Title tr.:** Snow-patches and snow erosion in the northern parts of the Ural.

Contains general discussion of the problem and detailed description of various forms and shapes of snow-patches in the northern Ural: their occurrence, structure, phenomena connected with their thawing and the mechanics of erosion caused by their alternative freezing and thawing. "Observations indicate that erosion by permanent ice (snow?) fields is increased by an accumulation of moisture. Meltwater carries heat downward from the edges toward the centers of the snow fields. The underlying frozen ground is thawed and becomes saturated with the meltwater. The continuation of this throughout the summer months greatly facilitates solifluction. Nivation occurs on the slopes and is assisted by the lack of vegetation. Chemical composition of the rocks influences only the rate and not the result of nivation. An arctic climate does not favor nivation processes."—SIPRE. Based on extensive literature in Russian and other languages.

28206. BØE, JOHANNES, 1891- . Felszeichnungen im westlichen Norwegen, I. Die Zeichnungsgebiete in Vingen und Henøya. Bergen, 1932. 70 p., 25 text illus., 44 plates, text map. (Bergen, Norway. Museum. Skrifter, no. 15) about 20 refs. **Title tr.:** Rock drawings in western Norway, I. The drawings area in Vingen and Henøya.

Monograph on rock engravings at Vingen (north of Bergen, province of Nordfjord, district of Rugsund), where altogether some 778 figures (singly or in groups) were discovered. Rubbings, etc., and photographs were made by the writer and Oslav Espevoll in the summers of 1925, 1927, and 1931. Descriptions are given of figures which represent elks (most common theme),

dogs (?), prone or dead animals, serpent-like figures, some like fishing-hooks, the "sticks" and "sickels", the round holes, and a few schematized figures of man. At Henøya, only a half mile from Vingen, a block with an engraving of a quadruped animal was found. The pictures at Vingen belong to the late neolithic period and may be classified in the so-called "arctic art". The age of the different themes, the styles and purpose of the pictures are discussed. **Copy seen:** DSI.

28207. BØE, JOHANNES, 1891- . Funde von paläolithischen Charakter in Finnmark. Bergen, 1932. 16 p., 12 illus. incl. text map. (Bergen, Norway. Museum. Årbok, historisk-antikvarisk rekke, no. 3) **Title tr.:** The finds of paleolithic character in Finnmark.

Contains discussion on the Komsa culture, discovered by Anders Nummedal at the fjords of Alta (around Komsa hill), Porsanger, Tana, and Varanger. The older sites were located on upper terraces. Nothing but unpolished stone artifacts of flint, quartz, quartzite and other kinds of stone material were found: nuclei, numerous forms of scrapers, burins, lamellar flakes, etc. Nummedal was convinced that the sites had been inhabited continuously by people of the same stock. Most of the finds belong to the Mousterian period, some also to the younger Aurignacian and Magdalenian periods. The geological dating of this culture, and the possible origin and disappearance of its bearers are discussed.

28208. BØGGILD, OVE BALTHAZAR, 1872- . Gunnbjarnite, a new mineral from East Greenland. (Meddelelser om Grønland, 1951. Bd. 142, nr. 8, p. 1-11, illus.) 8 refs.

Contains detailed description of a brown micaceous mineral found in summer 1946 on Mt. Steensby, Hold With Hope peninsula (73°40' N. 21° W.). The physical, optical, and chemical properties are given, with chemical analyses. The properties indicate that gunnbnjarnite may be closely related to minerals of the nontronite group. **Copy seen:** DGS.

28209. BØGGILD, OVE BALTHAZAR, 1872- . The mineralogy of Greenland. København, C. A. Reitzel, 1953. 442 p.

illus, diagrs., fold. map. (Meddelelser om Grønland. Bd. 149, nr. 3)

Contains the second edition of *Mineralogia groenlandica* (Arctic Bibliography, No. 1819), revised, enlarged, and written in English. Approximately 260 minerals are described in a classified listing with an alphabetic index. References, chemical composition, crystallography and other physical properties, mode of occurrence, locality, and, in some cases, chemical analyses are given for each mineral. Many are illustrated, and an alphabetic list of localities is included.

Copy seen: DGS.

28210. BØGVAD, RICHARD, 1897-1952. Efterforskning af mineralforekomster i Grønland. (Naturhistorisk tidende, 1950. Aarg. 14, nr. 3, p. 43-44) **Title tr.:** Search for mineral occurrences in Greenland.

Contains a review of four periods of search from the 17th century, the current one characterized by both private (mainly) and government prospecting. Brown coals are mined, but the finds of copper ore, galenite and cryolite did not prove economic. Finds of galenite at King Oscars Fjord, as well as cryolite and magnetite in the Arsuk Fjord area however, are under development. The eudalite localities in Julianehaab Distrikt are being checked. The marble quarry was abandoned after World War II. So far, precious metals have been but traced, and the highly exaggerated finds of uranium found uneconomic. So-called mud-volcanoes which may be connected with existence of oil are under investigation. Specific and geophysical investigations are considered the best approach to further search.

Copy seen: DLC.

28211. BØGVAD, RICHARD, 1897-1952. Magnetjernstenen i Grønnedal ved Ivgut. (Grønlandske selskab. Årsskrift, 1951, p. 16-26, illus.) **Title tr.:** The magnetic iron rocks in Grønnedal at Ivgut.

Contains brief review of experimental investigation and analysis of diamond borings of magnetic iron ore 1947-50, at this West Greenland locality (approx. 61°13' N. 48°07' W.). The magnetic field was measured and mapped by the Danish Meteorological Institute, and mapped geologically under author's supervision. The first promising analysis of the ore was followed by diamond borings; samples indicated about 800,000 tons iron ore with 25-30 percent iron at

50 m. depth. Expensive mining of a relatively cheap product precludes exploitation.

Copy seen: DLC.

28212. BOEREMA, I., and others. Experimental researches into hypothermia as aid in surgery of heart; preliminary communication. (Archivum chirurgicum neerlandicum, 1951. v. 3, fasc. 1, p. 25-34) 31 refs. **Other authors:** A. Wildschut, W. J. H. Schmidt, and L. Broekhuysen.

Contains an account of experiments with dogs made deeply hypothermic. In this state, the brain could withstand lack of blood circulation for a period three times longer than normal. This permitted an almost complete emptying the heart of blood and making an *à vue* intracardial intervention. The potentialities of the method are discussed. Summaries in French, German and Dutch.

(Virchows Archiv für pathologische Anatomie und Physiologie und für klinische Medizin, 1944. Bd. 312, p. 464-85, 6 fig. 5 tables) 40 refs. **Title tr.:** Experimental investigations on local frostbite, caused by prolonged exposure to mild cold.

Contains a study based on two kinds of experiments with rats: (1) with tails intermittently immersed in ice-water (-4° to 0° C.), and (2) kept continuously in an ice-box at a similar temperature; a detailed histological study of the affected tissues is included. Long exposure to this mild cold, caused progressive damage to the tissues and ultimately gangrene. Trophic disturbance, due to obstructed circulation and peristaltic conditions, was the main factor in damage.

Contains a presentation of some typical cases, based on experience in the Greek campaign; a discussion on the pathogenesis of frostbite anemia, further treatment, etc.

Copy seen: DSG.

28220. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936. Chukchi. Avtorizovannyĭ perevod s angliiskogo, chast' 1. Leningrad, 1934. xxx, 192 p., port. (Institut narodov Severa. Nauchno-issledovatel'skaia assotsiatsiia. Materialy po etnografii, t. 5) about 30 refs. **Title tr.:** The Chukchis. Authorized translation from English, pt. 1.

Contains chapter on social organization from author's English work, *The Chukchee*, 1909, pt. 3, p. 537-733 (see *Arctic Bibliography*, No. 1876). In foreword (p. iii-xii) the editor, I. P. Al'kor, reviews Bogoraz's work on the Chukchis

and other Paleo-Siberians (23 published contributions mentioned), and touches upon the problem of investigating primitive society on the basis of a materialistic ideology (citing works of V. Lenin, etc.). Introduction to the Russian edition by Bogoraz (p. xiii-xxx) contains notes on his field work among the Chukchis in 1890-1901, and his resultant publications. His empirical point of view in dealing with ethnological matters is stressed. The course of history of the Chukchi people and their economic situation is sketched with emphasis on changes after the Revolution. Certain ideological concessions are evidently made, the author stating that only in recent years has he come to the conclusion that certain relics in the family life and wedding customs of the Chukchis may indicate a former primitive communistic society among them, which later developed to a matrilineal form of family (p. xv). **Copy seen:** DLC.

28221. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936. Materialy po izucheniiu chukotskagoazyka i fol'klora sobrannye v Kolymskom okrugie. Chast' I-fa, obraztsy narodnoi slovesnosti chukoch. Peterburg, Tip. Akademii nauk, 1900. x, xxxvi, 417 p. (Irkutskaiâ ekspeditsiia Sibirakova. Trudy, otdel 3, t. 11, chast' 3) **Title tr.:** Materials for the study of the Chukchi language and folklore, collected in the Kolyma District. Pt. 1, specimens of Chukchi folk traditions.

Contains 168 numbered texts, collected by Bogoraz among the Chukchis in 1895-97 while taking part in the Yakut ethnographical expedition, organized by the East Siberian branch of the Russian Geographical Society and sponsored by I. M. Sibirakov. The book consists of three parts: (1) Chukchi texts with literal Russian translations (no. 1-48); (2) texts in Russian only, written down word for word from narrators (no. 49-144); and (3) accounts in Russian taken through the medium of an interpreter (no. 145-68). The names of the narrators, their places of habitation, date of recording and native titles for the narratives are given. Numerous explanatory notes and references are added. In the introduction (p. i-xxxvi) Bogoraz gives an account of how he learned the Chukchi language and of his experiences while working with Chukchis, as well as a rather extensive characterization of

Chukchi folklore. The texts may be divided into three main groups: legends of origin, or cosmogony and mythology (no. 49-61); the tales proper; and the historical narratives, mostly accounts on wars with *tan'gi* (i. e. Koryaks, Chuvantzy, and Russians), and with *aivany* (i. e. Eskimos). Six tales are marked as adopted from the Russians. The texts, other than tales and legends, represent such folkloristic material as: conjurations (e. g. to tame a wild reindeer), proverbs (seven), songs (four), accounts of deeds of shamans, procedure in courtship and sealing, individuals' life stories, etc. **Copy seen:** DLC; OCL.

28222. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936. Materialy po lamutskomuazyku. (In: Tungusskii sbornik, 1931. t. 1, p. 1-106) **Title tr.:** Materials on the Lamut language.

Contains a grammar (p. 3-47), dictionary (p. 66-106), and (p. 48-65) texts with Russian translation of various narratives and incantations (to the sun, earth, moon, fire, and bear) of Lamuts living in the Kolymsk and Gizhiginsk regions. The material was collected by the author in July-Sept. 1895 among three Lamut tribes, nomadizing on the rivers Molonda, Uyagan and Kieli. One tribe, the Shehebarkov, were Lamutized Yukaghir fishers from the Omolon River, who were wiped out two years later by a famine. **Copy seen:** CU; photostatic copy at NNC

28223. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936. Le mythe de l'animal-dieu, mourant et ressuscitant. (International Congress of Americanists. 22nd, Rome, 1926. Atti, pub. 1928. v. 2, p. 35-52) **Title tr.:** The myth of the animal-gods, dying and resuscitant.

Contains discussion on one of J. G. Frazer's theories in relation to animal ceremonialism among the Eurasian peoples. Veneration of the bear, whale, and raven as a totemistic ancestor among the Paleo-Siberians is investigated. The common pattern of the myth of origin of a cultural hero is reviewed: born from the union of a human female and an animal-god (usually a bear), which is killed and consumed by a man but later brought to life again. The bear worship is known not only among the Finno-Ugric and Paleo-Siberian peoples, but was adopted by Russian settlers of the Kolyma, Yana, Anadyr' and Indigirka Rivers. In the Bering Strait region, the

bear is replaced by the whale or raven. On the Chukotsk and Kamchatka Peninsula, all three myths of the North, those of bear, whale and raven, are crossed and intermingled. Chukchi and Koryak animal rites are cited. A myth of the Asiatic Eskimos on their goddess Sedna is appended (p. 49-52). **Copy seen:** DSI.

28224. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936. New problems of ethnographical research in polar countries. (International Congress of Americanists. 21st, Part I, The Hague, 1924. Proceedings, 1924. p. 226-46)

Contains condensed presentation of the whole complex of problems on the material and spiritual culture of the arctic peoples, a culture essentially uniform and well adapted to the natural surroundings, its uniformity due to external conditions, also to the common origin of some of the tribes. Three principal racial types: Mongoloid, Turcoid, and Finnoïd, are characterized and their dissemination given. Physical resistance to cold and effects of diseases, indigenous and new, are discussed (p. 229-30). Origin and migrations are indicated. The problem of domestication of reindeer and dog is presented. Finally, the ancient ethnogeography of the northern zone is summarized: the most ancient element represented by the Eskimo, who in the early Quaternary inhabited the north Bering region, moved eastwards as far as Greenland, lived by hunting sea-mammals and had dog-driving. Another ancient element is represented by inland dog-drivers: Yukaghirs, Yeniseians, perhaps some ancient element of Ostyaks, who came to the Ob' basin from the east and were influenced later by incoming Finns, these latter two were fishing peoples. Then follows the reindeer-breeding element of the northeast, represented by Chuvano-Yukaghirs, Koryaks and Chukchis, and later, by Tungus, who assimilated a great part of the Yukaghirs to the west; these in turn were assimilated by the Yakuts.

28225. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936. Novye dannye k voprosu o proto-aziatakh. (Leningrad. Universitet. Izvestiia, 1928. t. 1, p. 235-43) 5 refs. **Title tr.:** New data on the question of proto-Asiatics.

An ethnographical hypothesis is presented of the origin and relationship of

the Paleo-Siberian peoples. It is based in part upon the ideas of academician Sushkin. The Paleo-Siberians are postulated as not Americanoids, and the Eskimos as of Asiatic origin. The terms "Ostyak-Samoyeds" and "Yenisey-Ostyaks" are wrong. The people designated by the former are northern Samoyeds (Yuraks) who call themselves Sel'kup or "people of the woods"; they should be considered Paleo-Siberians, cf. the field work of G. N. Prokof'ev among the Yuraks. The people termed "Yenisey-Ostyaks" should be called Yeniseians or Kets. The Dolgans, Yakutized Tungus, were originally of Paleo-Siberian stock and related to the Chuvantzy and Yukaghirs. The Gilyaks, Orochi, Ol'chi and Gold were possibly also Paleo-Siberians, but later assimilated by the Tungus-Manchu. The Paleo-Siberian peoples spread from the southwest in the direction of northeastern Siberia.

28226. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936. O tak nazyvaemom iazykē dukhov (shamanskom) u razlichnykh vīetvel' ēskimosskogo plemeni. (Akademiia nauk SSSR. Izvestiia, 1919, ser. 6, no. 8-11, p. 489-95) 6 refs. **Title tr.:** On the so-called language of spirits (shamanistic) among different branches of the Eskimo people.

Strange words used in shamanistic incantations are considered. They are either words from other dialects, or figurative descriptions, e. g. an animal called by a descriptive epithet rather than the usual name, "the tailed one", "the whiskered one", and such. Work of A. L. Kroeber on the same problem is discussed (cf. his *The Eskimos of Smith Sound*, 1900, *Arctic Bibliography*, No. 9331), and supplemented. The shamanistic "tables of prayers" with drawings of animals are described. Conclusion is offered that the Asiatic Eskimo dialect represents the oldest Eskimo language.

28227. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936. Paleoasiatic tribes of south Siberia. (International Congress of Americanists. 22nd, Rome, 1926. Atti, pub. 1928. v. 1, p. 249-72, 3 text maps) 14 refs.

Contains a classification of arctic and subarctic peoples and their cultures. As Paleo-Asiatics, or Proto-Asiatics, are accounted not only the Chukchis, Yukaghirs, Chuvantzy, Yeniseians, Kam-

chadals and Koryaks, but also (according to Bogoraz) the Gilyaks, Goids, Samoyeds, Lapps, and a group of Turcized peoples in the mountainous countries of Altai and Sayan: the Soyots, Karagas, Kamassins, Koibals and Kotts (now extinct). The culture of the last group, or the so-called southern Paleo-Asiatics, is discussed: their ancient form of reindeer breeding, supplemented by fishing, digging for roots, gathering of cedar-nuts and berries, but no agriculture. It is stated that in the whole of northern Siberia, the Proto-Asiatics had easily assumed the language and, partly, the culture of every incoming people down to the Russian.

Contains an artist's account of his life and adventures in the North: a year (1896-97) spent in the District of Pechora, the Bol'shezemel'skaya Tundra and on Vaygach Island, painting pictures and collecting Samoyedic idols; and another year (1899-1900) on Novaya Zemlya. On the latter trip, accompanied by a zoologist and a chemist, he sailed on the yacht *Mechta* to Novaya Zemlya, where the party built a hut for wintering. In an attempted excursion in Kara Sea, the *Mechta* caught in the pack ice off Matochkin Shar, was abandoned and the party eventually rescued by Samoyeds. Through the winter, zoological collections were made and pictures painted (five portraits of Samoyeds are reproduced). In the spring, the *Pakhtusov* of Vil'kitskii's hydrographic expedition carried the party to the Solovetskiye Islands in the White Sea. The text of this article is similar to that of 1906 (*Arctic Bibliography*, No. 1994); some of the illustrations are different and none is in color here.

"Explains some aspects of weather forecasting for three to 18 days according to the method of S. T. Pagava (which is essentially based on a comparison of the current synoptic processes with analogous developments given in a number of schemes not presented here). For this purpose the 500 mb topography and isallobaric charts as well as the relative topography 500/1000 mb are compiled daily. Due to the scarcity of aerological stations in Siberia, a special construction technique is used, based on ground observations for the 900 mb surface, but for higher surfaces on scattered ascents and personal judgment. The main problem for the forecaster is to watch the beginning of a new "synoptic period," in order to determine its tendency on the basis of observations during the first two-three days (especially considering the location of isallobaric centers in regard to the pressure formations) and compare it with the synoptic history of the previous period. A synoptic example is discussed on this basis, showing the effect of pressure formations in the Siberian Arctic."—*Meteorological abstracts and bibliography*, Aug. 1954. v. 5, no. 8, p. 897.

The Severnaya Dvina carries away annually one million cu. m. of earth from a single shoal. One method used to reduce erosion and regulate the course of the stream is the strengthening of the banks by planting trees, chiefly spruce. It was tested by the author with notable success on the Severnaya Dvina, Oka

and Vyatka. The work on the Vyatka and its results are described in detail.

28261. BORUM, VILLY, 1903- Dagligt liv i Grønland. (In: Turistforeningen for Danmark. Årbog 1952-53, pub. 1952, p. 89-116, illus.) **Title tr.:** Daily life in Greenland.

The author, an inspector for the Danish government's Greenland Dept. notes that there is little difference between the daily life in Greenland and that in other lands in process of construction and development. Modern methods and machinery and means of communication have been adopted easily by the Greenlanders; and some five to ten percent of the native population have command of the Danish language. The younger generation as alert and ambitious as anywhere else in the world, are described and pictured in their gainful occupations, and their pastimes.

28265. BOUDA, KARL ERNST, 1901-. Das erste in Russland gedruckte ostjakische Buch. (Ungarische Jahrbücher, 1932. Bd. 12, Heft 3-4, p. 340-51) **Title tr.:** The first Ostyak book printed in Russia.

Contains 35 short Ostyak texts, consisting of brief accounts of the animals, birds and fish of the Ostyak country, with German translation and linguistic annotations. The texts were taken from the first Ostyak book printed in the Latin alphabet in the U.S.S.R., here cited as: *Hanti knjiga alun untlija pata* (Ostyak book for elementary teaching) arranged by P. E. Khatanziev, with collaboration of G. A. Staršev and M. F. Anufriev (Moskva, 1930. 76 p.). No copy of this book has been located as yet, but it is said (by Bouda) to have been a handbook for Ostyak school children based on the northern dialect of Obdorsk, and to have included two pages of illus. of Ostyak ornaments. **Copy seen:** DLC.

28266. BOUDA, KARL ERNST, 1901-. Die finnisch-ugrisch-samoyedische Schicht des Jukagirischen. (Ungarische Jahrbücher, 1940. Bd. 20, Heft 1-2, p. 71-93) **Title tr.:** The Finnish-Ugrian-Samoyedic layer of the Yukaghir language.

Contains investigation of the Yukaghir language, based on texts collected by Jochelson. About 100 Yukaghir words and forms have parallels in Finno-Ugrian and/or Samoyedic languages. Borrowings from Chukchi are rare, and the Chukchi language is of different structure. The Yukaghir language, concludes the author, has a strong Uralic base.

28268. BOUDA, KARL ERNST, 1901- . Das obugrische Passivum. (Ungarische Jahrbücher, 1937. Bd. 16, Heft 2-3, p. 286-93) 10 refs. **Title tr.:** The Ob-Ugrian passive.

Contains a linguistic study based on published Ostyak and Vogul texts and grammars, with conclusion that both languages have a quite effective passive form, though details of its use are not yet clarified.

Copy seen: DLC.

28269. BOUET, OLE. "Det ømme punkt." (Grønlandsk selskab. Årsskrift, 1952. p. 116-21, illus.) **Title tr.:** "The sore spot."

A doctor's viewpoint is presented on the problem of tuberculosis in Greenland. Comparison between Denmark and Greenland is unfair. The latter has the handicap of lack of adequate hospitals, modern facilities and preventive measures. Its population is scattered, is experiencing effects of climatic change, altered diet, inadequate housing. Various remedial measures are noted. The most important factor is cooperation of the Greenlanders themselves. In time the disease will be successfully checked. **Copy seen:** DLC.

28270. BOUT, PIERRE. Études de géomorphologie dynamique en Islande. Expéditions polaires françaises, Missions Paul-Émile Victor. III. Paris, Hermann, 1953. 219 p. illus. 21 plates, 2 maps (1 fold.), graphs, diagrs., cross-sections, tables. (Actualités scientifiques et industrielles, 1197) 105 refs. **Title tr.:** Studies of dynamic geomorphology in Iceland. French Polar Expeditions under Paul-Émile Victor. III.

Includes a chapter (p. 104-111) comparing periglacial conditions of west and southwest Iceland with those of the Disko Bay region of West Greenland, based on observations by Boyé (*Arctic Bibliography*, No. 20857) and others. Geology and climatic differences are briefly noted. Wind erosion plays a less important part in geomorphic processes in West Greenland than in Iceland. Solifluction on slopes, various forms of polygonal soils, and hydrology are discussed.

28272. BOWER, D. Navigation on some recent R. A. F. flights in high latitudes. (Institute of Navigation, London. Journal, Apr. 1953. v. 6, no. 2, p. 148-58, text map, graph, table) 3 refs.

Application of techniques of navigation in high latitudes during three flights in Sept. 1952 is described. Planes left Keflavik, Iceland for (1) Churchill, Man., and Goose Bay, Labrador, (2) Resolute Bay on Cornwallis Island, and (3) North Pole and Thule, northwest Greenland. Flight preparation, procedure, gyro compass performance, dead reckoning methods, astro-fixing, mapping, radio aids, and magnetic compass performance are discussed. It is concluded that radio would solve many aerial navigation problems and that one of the most serious obstacles to regular air line operation is lack of meteorological information.

28274. BOYD, VERNON D. Motorized surface transportation in the Antarctic. (American Philosophical Society. Proceedings, Apr. 30, 1945. v. 89, no. 1, p. 379-81)

The track-laying type of machine commonly known as the "caterpillar" variety is best for work under polar conditions. Factors in successful use of such vehicles are discussed, including construction, the use of true track-laying machines vs. the ski-steered, or automobile, variety, length and width of tracks, engine lubrication system, instruments, and the advisability of front-wheel drive. Tractor sleds are also discussed, the "bob" or "travois" type being preferred to others. Their construction is described, as is that of the "scoot" sled used for ship-unloading and large-scale short-haul jobs. "The ideal tractor caravan for long-distance trail operations would consist of a front-wheel-drive tractor, of sufficient size and power to permit hauling a pay load well over and above its own necessary fuel supply, and several travois-type sleds. The usual tents for living quarters for the crew would be replaced by one of the modern automobile trailers, insulated and mounted on at least three runners, these runners to replace the regular wheels." An itemized list is prepared of equipment and supply for maintenance, and food for the tractor party is briefly considered.

28275. BOYLE, R. W. The geochemistry and origin of the gold bearing quartz veins and lenses of the Yellowknife greenstone belt, Northwest Territories, Canada. (Economic geology, Nov. 1953. v. 48, no. 7, p. 617)

Contains abstract of paper presented at joint meeting of the Society of Economic Geologists and the Geological Society of America, Toronto, Canada, Nov. 9-11, 1953. "The economic gold quartz veins and lenses occur within shear zones in steeply dipping greenstones (amphibo-

lites) of Precambrian age." The mineralogical composition and zones of alteration in these shear zones are described.

Copy seen: DGS.

28276. BOYLE, R. W. On the colour of black and grey quartz from Yellowknife, Northwest Territories, Canada. (American mineralogist, May-June 1953. v. 38, no. 5-6, p. 528-35, illus., table) 4 refs.

"Heating tests, chemical tests, and x-ray analysis have shown that the colour of black and grey quartz, occurring in veins and lenses in the greenstones and sediments of the Yellowknife gold belt [Great Slave Lake], is primarily due to disseminated carbon and graphite. Finely divided sulphides or other dark minerals may be responsible for a partial darkening of the quartz, but these impurities are secondary in effect to those of carbon or graphite."—Author's abstract.

28285. BREÏTFUS, LEONID L'VOVICH, 1864-1950. Aperçu sur l'expédition scientifique pour l'exploration des pêcheries de la Côte Mourmane et résumé des résultats acquis pendant la période de 1898 à 1905. Marseille, Typogr. Barlatier, 1906. 47 p. illus. (Comité d'assistance aux pêcheurs russes de la Côte Mourmane.) *Title tr.:* An outline of the scientific expedition for the investigation of the fisheries on the Murman Coast and a summary of the results achieved during the years 1898-1905.

Contains a general description of the northern coast of Kola Peninsula, with notes on the living and working conditions of the fishing population and the fisheries there. Author sketches the organization and principal aims of this expedition directed by N. M. Knipovich, and outlines its activities during the first seven of its ten-year program: oceanographic and marine zoological research, improvement of fishing (especially salmon-fishing) methods, introduction of better ways of fish preservation (Dutch method); social and economic work; meteorological service; use of the telegraph; medical assistance and child welfare among the fishermen. A list of 44 works published by the members of the Expedition is included (p. 15-18). A final survey of the expedition's work was published by the author in 1930 (*Arctic Bibliography*, No. 2120).

Copy seen: MH.

28286. BREÏTFUS, LEONID L'VOVICH, 1864-1950. Die Erforschung des Nordpolargebiets in den Jahren 1913-28; die innere Arktis und der europäische Sektor. (Geographisches Jahrbuch, 1929, pub. 1930. Bd. 44, p. 289-374) *Title tr.:* Study of the North Polar region in the years 1913-28; the inner Arctic and the European sector.

Contains a review of publications on the Arctic in the 15-year period with brief bibliographical data for 1,276 works. Successive sections deal with the region in general and by localities: the Arctic Ocean, North Atlantic and Greenland Sea, the European arctic islands (Jan

Mayen, Spitsbergen, Bear and Hope Islands), Fennoscandia, the arctic coast eastward from the White Sea (Kanin and Timan Peninsulas, Bol'shezemel'skaya Tundra, Pechora basin, Northern Ural, Vaygach and Kolguyev Islands), and the White Sea. In each section as relevant, meteorology and climate, hydrography, earth magnetism, geology, biology, flora and fauna are treated. Expeditions, institutions for polar research, and biographies of arctic workers are also covered. Russian materials are included. Authors' names are listed (among others) in index at end of vol.

Copy seen: DLC.

28287. BREÏTFUS, LEONID L'VOVICH, 1864-1950. Das Nordpolargebiet 1913-31. (Geographisches Jahrbuch, 1932. Bd. 47, p. 129-270) *Title tr.:* The North Polar region 1913-31.

Contains a review of publications mainly on those parts of the Arctic not treated in *Die Erforschung des Nordpolargebiets* . . . 1913-28, q. v. Here, 1,826 books and papers are listed for three large sectors: the North Polar region as a whole (generalities), the Asiatic sector (arctic Siberia), and the Greenland-American sector (including Canada and Alaska). The material of each sector is arranged in chapters: generalities, ethnography, expeditions, climate and geophysics, geology, hydrography and cartography, biology, zoology, fishing and hunting, and botany. The work covered by each chapter is briefly characterized with reference to the publications listed. Author's names are listed (among others) in index at end of vol. Breïtfus carried on his record of arctic publications by *Die Erforschung der Polargebiets* . . . 1932 bis 1947, 1950 (*Arctic Bibliography* No. 20879).

28289. BREÏTFUS, LEONID L'VOVICH, 1864-1950. Die territoriale Sektoreinteilung der Arktis im Zusammenhang mit dem zu erwartenden transarktischen

Luftverkehr. (Petermanns Mitteilungen, 1928. Jahrg. 74, p. 23-28, map) 4 refs. **Title tr.:** The territorial division of the Arctic into sectors in connection with anticipated transarctic air traffic.

Successful arctic flights of Amundsen, Byrd and Wilkins and the planning of trans-arctic commercial routes call for new regulation of legal status of the former arctic *terrae nullius*. Author supports the principle of sectorial division between powers bordering upon the Arctic, as it had been suggested in 1907 by Senator Poirier in Canada and promulgated by Soviet government in 1926. He proposes to extend this principle by recognition of sovereignty of border states not only to all discovered and undiscovered lands and all "closed" waters like Hudson Bay in America and north Siberian seas in Asia, within each sector, but, with some restrictions, to all ice-covered waters within, and to airspace above these sectors. Map indicates courses of arctic flights and planned trans-arctic routes. English translation under title *Territorial division of the Arctic*, 1929, q. v.

S.-Peterburg, 1912. 208 p. illus., fold. col. map. **Title tr.:** The work of the Murmansk Scientific-Industrial Expedition during 1905. Report of the head of the expedition.

Contains account of research activities conducted from the steamer *Andreï Pervozvannyi* and later from the sailing vessel *Rybak*, by L. L. Breifus and assistants. Part I (p. 1-128) deals with: the general activities and biological, hydrological and meteorological observations; salmon fisheries; improving methods and communication in the fisheries. Chap. 2 (p. 27-70). *Plankton bliz beregov Zapadnago Murmana v svyazi s sostoianiem promyslov v techenie 1903-1905* (Coastal plankton of the western Murman and its effect on the fisheries during 1903-1905) is contributed by A. K. Linko. Chap. 3-4 report on Murman coast fisheries in 1905 according to the "fishery-telegraph"; and on the Norwegian fisheries investigations (by the *Michael Sars* and other vessels) in Barents Sea in 1905. Part II (p. 131-208) contains a list of stations (along the coast and in Barents Sea to about 71°30' N.) and the work done on them; also

journals of the zoological, fisheries and hydrological investigations.

28293. BREMNER, PETER C. The Dominion Observatory seismic station at Resolute Bay, Northwest Territories. Ottawa, Queen's Printer, 1952. p. 60-80, 10 illus. 2 tables. (Canada. Dominion Observatory, Ottawa. Publication. v. 16, no. 2)

Contains detailed description of the construction of the seismic station and installation of instruments, July 4-Aug. 29, 1950, at Resolute Bay, Cornwallis Island. The seismometers were installed in a rock outcrop 1,400 ft. from the Resolute weather station, the recording unit in a separate building close to the station. The routine operations are described. Special investigations include studies of: (1) earthquakes of the eastern Arctic Islands; (2) seismic disturbances caused by sea ice; (3) use of permafrost as a foundation for seismometers; and (4) occurrence of micro-seismic storms in relation to atmospheric disturbances.

Contains a summary of this subject as it is offered by Collège de France in the course of study in Historical Sciences: Philology and Archeology, Prehistory. Eskimo art is outlined: in Alaska where it is most developed, in Greenland, on Hudson Bay, and the Old Bering Sea culture is compared with European prehistoric art of the Magdalénien period. Numerous similarities are stressed, and the Eskimo culture is designated as proto-neolithic. The art of the North Pacific Indians, the Haida, Tlingit, Tsimshian and Kwakiutl, is compared with the Chinese bronze art of the Shang civilization (1766-1122 B. C.?) and the similarity, it is stated, cannot be incidental.

tr.: What do the sites on the Letniy Bereg of the White Sea represent?

Contains archeological evaluation of some 22 sites between the villages Nenoksa and Letnyaya Zolotitsa on Onezhskaya Guba, excavated by the author in 1926-27. Objects of stone (mostly arrowheads), potsherds and some bronze artifacts were produced there; the inhabitants were sea hunters and fishers. Sites and objects are compared with sites of the late neolithic, or the so-called "arctic culture" of Scandinavia and Finland (dated about 1500 B. C.), and with Eskimo sites in East Greenland.

BRODSKY, D. See Jochelson-Brodsky, Dina L.

28314. BRØGGER, ANTON WILHELM, 1884- Die arktischen Felsenzeichnungen und Malereien in Norwegen. (Ipek, Jahrbuch für prähistorische und ethnographische Kunst, 1931, p. 11-24, text illus., 13 illus. on 4 plates, text map) 50 refs. *Title tr.:* The arctic rock drawings and paintings in Norway.

Contains review of previous work, description of the sites and drawings, and a general survey of the Scandinavian arctic art, so-called: its age, meaning and purpose. The discovery of these engravings and paintings in northern and

western Norway is outlined: the sites (37), their location, and number of paintings in each indicated. As this art is different from, and independent of bronze age drawings in southern Sweden, the term "arctic" was introduced by Brøgger in 1909 to designate it. Animals (reindeer, elk, stag, bear, whale, fish, and sometimes sea birds) are depicted in naturalistic style, often larger than life size; human figures and hunting scenes do not appear. This is the art of hunters of the pre-agricultural period, magical in purpose; and it belongs to an arctic culture of the late paleolithic and early neolithic. *Copy seen:* MH-P.

28315. BRØGGER, ANTON WILHELM, 1884- Den arktiske stenaldre i Norge. Christiania, J. Dybwad, 1909. vii, 278 p., 270 illus., incl. plates and text maps. (Norske videnskaps-akademi, Oslo. Skrifter II, Hist.-filos. klasse, no. 1) 130 refs. *Title tr.:* The arctic stone age in Norway.

Monograph on a neolithic culture in Scandinavia, Finland, and the Baltic countries. Its attribution to the Lapps by O. Rygh and O. Montelius is questioned. Localities of sites of its remains are indicated on map (p. 3). It is a sea-shore culture, and the terrain of the sites belongs geologically to the Tapes-Littorina transgression. Description is given of typical artifacts: slate points, knives, T-form implements, perforated discs, sinkers, clubs and axes; objects of flint and bone; triangular arrow points of quartzite; ornaments and figurines of amber; ornamented potsherds, etc. The rock engravings of northern Scandinavia are also investigated (map p. 105). Their commonest motives are the reindeer, elk, bear, and fish; the drawings are similar to those found at Lake Onega and in Siberia. The ornaments and figurines of amber originated in Lithuania (Schwarzort) and East Prussia, and came to the far North as objects of trade. This arctic stone culture, it is concluded, did not develop from the South Scandinavian stone culture. Rather it came from Russia via Finland and the East Baltic region at the end of ice age, and, together with reindeer, penetrated further to Sweden and Norway. It is called, therefore, arctic-baltic stone culture. The bearers of this culture were a long-headed race of tall stature, obviously not Lapps or Finns. Summary in German p. 240-65.

Copy seen: DLC.

28316. BRØGGER, ANTON WILHELM, 1884- . Late palaeolithic man in northernmost Norway. (*In: International Symposium on Early Man, Academy of Natural Sciences of Philadelphia, 1937. Early man, p. 53-60*)

Contains brief report of paleolithic finds excavated by A. Nummedal in the northernmost part of Finnmark, 1925-34 and evaluated by J. Bøe. Altogether 60 sites along the arctic seashore are known. The artifacts are of a red-brown quartzite and a dolomite-flint; bone and horn objects not being found. Scrapers in great numbers were excavated at all sites, indicating that reindeer and seal hunting formed the economic foundation on which existence of these people developed. No such finds have been made west of these Finnmark sites, though related finds are expected to be made in northern Russia and Siberia. At the time these people lived (12,000-15,000 years ago), the conditions prevailing along this coast were similar to those under which the Greenland Eskimos live today. For full report on this work, see *Arctic Bibliography*, No. 1805. **Copy seen:** DLC.

28317. BRØGGER, ANTON WILHELM, 1884- . The prehistoric settlement of northern Norway. Bergen, 1932. 15 p., 6 illus., fold. map. (Bergen, Norway. Museum. Årbok, 'historisk-antikvarisk rekke, no. 2)

Contains a sketch of the iron age culture from the Lofoten Islands to Tromsø. The influence of climate and landscape on the form of production and ways of colonization of the country is discussed. The periods of the Norwegian iron age are characterized: the early iron age, age of migration (400-600 A. D.), the Merovingian age (600-800 A. D.), and the Viking age (800-1000 A. D.). The finds on the Lofoten Islands and in graves at Karlsøy are described and illustrated. Map shows the iron age tumuli in northern Norway. The means of livelihood was agriculture in its special Norwegian form, supplemented by "arctic industry": hunting and trapping of seal, whale and birds. **Copy seen:** DSI.

28319. BRØNDSTED, JOHANNES, 1890- . Problemet om nordboer i Nordamerika før Columbus; en bedømmelse af de amerikanske materiale. (Aarbøger for nordisk oldkyndighed og historie, 1950, pub. 1951. p. 1-152, 55 illus.) 31 refs. **Title tr.:** Norsemen in North America before Columbus; an appraisals of the American materials.

Contains an archeological and linguistic investigation of monuments and relics found in America presumably from the pre-Columbian times: the Beardmore find of Norse iron weapons and tools (Ontario, Canada), the Newport Tower in Rhode Island, and the Kensington stone with runic inscriptions found in 1898 in Minnesota. After a thorough investigation, the author concludes that none of these and other relics can prove conclusively Norsemen's presence on the American continent in the Middle Ages. The Vinland of the Norse sagas cannot be located yet; it is likely however, that the Norsemen of Greenland maintained some intercourse with North America. Archeologists must search on the American continent for settlements with house-ruins or graves of Norse type as found in Greenland. Opinions on the runic inscriptions on the Kensington stone and other monuments found in America are given by the linguist K. M. Nielsen and the runologist Erik Moltke, and they are on the whole negative. The author, sponsored by the American-Scandinavian Foundation and the Viking Fund, spent about three months in the United States and Canada, making personal examination of the available archeological material. Summary in English, p. 123-52. **Copy seen:** DLC.

28321. BROOKS, ALFRED HULSE, 1871-1924. *Blazing Alaska's trails.* Published jointly by the University of Alaska and the Arctic Institute of North America [Washington, D. C.], 1953. xxi, 528 p. 40 illus., 6 maps in text and on endpapers, 4 tables, approx. 100 refs.

Contains a collection of 27 essays written between 1914 and 1922, and assembled, completed, and edited by Burton L. Fryxell. Dr. Brooks, "perhaps the greatest of all Alaskan scientists," was formerly head of Alaskan work of the U. S. Geological Survey. A wide range of subjects is covered, including relief and drainage, climate, vegetation, geology, animal life, native tribes, Alaskan history from discovery in 1741 to about 1913, mining and mining industry (especially gold), early transportation (including dog-sledging), fisheries, agriculture, school and missions, and government. The extensive scattered information on geographic features, trails, vessels, individual explorers, prospectors, traders, mountaineers, missionaries, etc., is thoroughly indexed (p. 519-28). A compre-

hensive and authoritative picture of Alaska as it was about 1920 is presented. Illustrated with many photographs, some by the author. A biographical sketch of Dr. Brooks by Mrs. Brooks, and a foreword by John C. Reed are included.

Contains a brief general discussion of climatic changes and glacial advances and retreats from the 14th to the 20th century in relation to the size of the arctic icecap, the position of the polar front, and the prevailing wind directions of the North Atlantic during this period.

Copy seen: DLC.

28324. BROOKS, CHARLES ERNEST PELHAM. What is happening to the weather? (Harper's magazine, Jan. 1953. v. 206, no. 1232, p. 32-39)

Contains a brief outline of climatic changes during the past 20,000 years with special emphasis on the last fifty years and the warming-up and shortening of their winters. The possible factors for this recent change are analyzed, and its biological and economic effects discussed. The effects on arctic fisheries, agriculture, etc., are emphasized.

28325. BROOKS, JAMES W. A record of North America's most westerly moose. (Journal of mammalogy, Aug. 1953. v. 34, no. 3, p. 396-97)

Contains a note on a moose killed at Cape Prince of Wales (65°36' N., 168°05' W.). This is the most westerly point of the North American continent, and separated from the periphery of normal moose habitat by nearly 200 miles of mountains and tundra.

Copy seen: DSI-M.

8326. BROOKS, PHILLIPS M. Gloves for flyers; factors in development. (Air surgeon's bulletin, Apr. 1944. v. 1, no. 4, p. 21-23, illus.)

Contains a discussion and analysis of glove construction, aimed not only at protection of the hand but also the latter's thermoregulatory and thermosensory function within the organism. The problems of optimal hand temperature; glove size for heat insulation and dexterity; glove shape and type; relative activity of the individual fingers; training in performing routine manipulations with gloved hands, etc., are presented in detail and conclusions drawn.

28327. BROTHERUS, VIKTOR FERDINAND, 1849-1929. Anteckningar till norra Tavastlands flora. (Societas pro fauna et flora Fennica. Notiser ur förhandlingar, 1871-74, pub. 1873. Häfte 13, (ny ser. 10) p. 185-217) **Title tr.:** Notes on the flora of northern Tavastland.

In the summers of 1869 and 1870, the author studied the flora of the region extending roughly from Jyväskylä (62°15' N., 25°45' E.) in the south to Pihitpudas (63°21' N.) in the north, and from Viitasaari (25°48' E.) in the east to Karstula (about 24°50' E.) in the west. Many species of Cotyledons (Monocotyledons and Dicotyledons), Filicales (ferns), Musci (mosses), Hepaticae (liverworts) and Characeae (stoneworts) are listed.

Contains description of a method used in the Finnish campaign and consisting of "tanning" the injured area with potassium permanganate and silver chloride, combined with open treatment.

Copy seen: DSG.

28329. BROWN, CHRISTOPHER ERNEST GORDON, and A. S. DADSON. Geology of the Giant Yellowknife Mine.

(Canadian mining and metallurgical bulletin, Mar. 1953. v. 46, no. 491, p. 151-68, text map, diagrs., sections) 10 refs. Also pub. as: Canadian Institute of Mining and Metallurgy. Transactions, 1953. v. 56, p. 59-76.

Contains a detailed discussion of the system of orebodies of this mine on the west side of Yellowknife Bay, Great Slave Lake. A summary of its geology and that of the surrounding region is followed by a systematic, detailed structural and petrologic description of the Giant ore zone system, taken by zones and illustrated by diagrams and sections. Mineralization and paragenesis, structural control, and ore genesis are also discussed in some detail.

28330. BROWN, IAN ALEXANDER, 1918-, and others. Poliomyelitis, VIII. Studies on temperature regulation. (Archives of neurology and psychiatry, Mar. 1953. v. 69, no. 3, p. 332-42, illus., tables) 32 refs. Other authors: A. B. Baker and Sam Cornwell.

Contains a clinico-pathologic study of the hypothalamus in 115 cases of bulbar poliomyelitis aiming to determine whether any of the cell groups is specific in temperature regulation of the body. In nine of these cases, in which hypothermia was revealed clinically, the lateral and the medial hypothalamic nuclei were severely damaged. Since the lateral nuclei were also damaged in the cases of hyperthermia found among the 115 patients, only the injury to the medial cell group is considered responsible for hypothermia. The lateral nuclei appear to play an important accessory role, their damage producing poikilothermia, with either abnormal cooling or heating.

28331. BROWN, IRA CHARLES. Late faults in the Yellowknife area, Canada. (Geological Society of America. Bulletin, Dec 1953. v. 64, no. 12, pt. 2, p. 1401)

Contains abstract of a paper presented at the Nov. 1953 meeting of the Society, Toronto, Canada. A major late Precambrian fault system is described which extends 130 miles northwest from Yellowknife Bay, Great Slave Lake, to Indin Lake. Relations of major faults to complementary faults indicate shear forces which moved the west side of the fault system south relative to the east side.

28333. BROWN, MALCOLM, 1916- , and J. PAGE. The effect of chronic exposure to cold on temperature and blood flow of the hand. (Journal of applied physiology, Nov. 1952. v. 5, no. 5, p. 221-27, illus., tables) 17 refs.

Contains a comparative study of Eskimos on Southampton Island, Northwest Territories, and students living in temperate climate. Some of the effects of chronic exposure to cold are: lower temperature required for comfort; greater skin temperature in cold environment, and twice as large blood flow than in the white man; greater blood flow at any given water-bath temperature; slower change of blood flow in response to local cold; greater degree of spontaneous fluctuation in hand blood-flow, etc. The differences observed in blood flow of the Eskimo hand appear to enhance its function in the cold.

28334. BROWN, MALCOLM, 1916- , and others. Some remarks on premature

ageing in the Eskimos. Abstract no. 6. (Canadian Physiological Society. Proceedings. 11th annual meeting, Oct. 24-25, 1947. p. 5) *Other authors:* R. G. Sinclair, L. B. Cronk, and G. C. Clark.

"This was one part of a more general study of the Eskimos of Southampton Island, N. W. T., carried out by the Queen's University Arctic Expedition, 1947." Abstract is given of an account of premature ageing observed in 182 Eskimos and half-breeds. Poor nutrition, repeated infection, the physical environment, and in women, also repeated child bearing and prolonged lactation are considered as possible causes of early ageing.

Copy seen: DSG.

28335. BROWN, MALCOLM, 1916- , and others. Temperature and blood flow in the forearm of the Eskimo. (Journal of applied physiology, Feb. 1953. v. 5, no. 8, p. 410-20, illus. tables) 13 refs. *Other authors:* J. D. Hatcher, and John Page.

Contains a comparative study of Eskimos living on Southampton Island, Northwest Territories, and white students in Kingston, Ontario, made at approximately similar, low, outdoor temperatures. The forearm blood flow, and the temperature of skin, subcutis and muscle of the forearm were recorded. The degree of spontaneous fluctuation in forearm blood flow was greater in the Eskimo and the blood flow was greater in bath temperatures below 45° C. In baths below 38° C., the muscle temperature of the Eskimo was lower than in the white group.

Quarterly journal, Apr. 1953. v. 79, no. 340, p. 272-81, illus., tables) 10 refs.

"Hollerith cards (160,000) for 5° squares in 60-70° N. were used to compute decadal mean air and sea temperatures (year, July, Dec.-March) 1900-1949. Air temperatures mostly show a general rise up to 1930-39, irregular changes in next decade. Sea temperatures mostly show a rise throughout. The fluctuations from decade to decade in the eastern and western parts are dissimilar."—*Meteorological abstracts & bibliography*, Aug. 1953. v. 4, no. 8, p. 913. **Copy seen:** DWB.

28337. BROWN, ROBERT NEAL RUDMOSE, 1879- . Svalbard of today. (Scottish geographical magazine, Dec. 1950. v. 66, no. 3/4, p. 173-77, illus., text map) 8 refs.

Contains a short general account of post-World War II conditions and prospects. A brief survey of the tourist industry since 1893 is given, and its future development in terms of hotels and adequate coastal charts for steamers, etc., is discussed. Norwegian and Russian coal mining properties in Isfjorden, Bellsund, and Kongsfjorden regions and Bjørnøya are described, and statistics are given on coal export, 1938-48. Survey work and publications by the Norwegian government and private expeditions of British universities are noted. Very brief mention is made of political history. **Copy seen:** DLC; DGS.

28338. BROWNING, J. C. Quebec annual review 1951. (Canadian mining journal, Feb. 1952. v. 73, p. 99-106, illus.)

Describes mining developments in Quebec in 1951, including (p. 105-106) the Knob Lake area iron ore enterprises. **Copy seen:** DLC.

28339. BROWNING, J. C. Rankin Inlet Nickel Mines. (Canadian mining journal, Dec. 1953. v. 74, no. 12, p. 56-57, illus.)

Contains general account of the movement of equipment and supplies, summer 1953, by water from Montreal to Rankin Inlet on the western shore of Hudson Bay, 300 miles north of Churchill. Unloading operations, which took 14 days, are described. Eight buildings were erected at the mine site by Sept.

1953, and shaft sinking was well under-way by November. **Copy seen:** DGS.

28340. BROWNRIGG, GARRETT MARY, 1907- . Frostbite: classification and treatment. (American journal of surgery, Feb. 1945. v. 67, p. 370-81, 2 tables) 34 refs.

Contains discussion (by a surgeon at St. John's, Newfoundland) of the essential similarity of all cold injuries; the clinical classification, according to the severity of injury and the therapy. With regard to the latter the avoidance of heat, of sympathectomy and of amputation in dry gangrene are recommended. **Copy seen:** DLC.

BRUGER, MAURICE, see Miller, J. H., and M. Bruger. Cold-pressor reaction . . . hypertension. 1939. No. 30811.

28341. BRUGGEMANN, P. F., and J. A. CALDER. Botanical investigations in northeast Ellesmere Island, 1951. (Canadian field-naturalist, Oct.-Dec. 1953. v. 67, no. 4, p. 157-74, 3 tables). *Also pub.* as: Canada. Dept. of Agriculture. Division of Entomology, Contribution no. 3009; Division of Botany and Plant Pathology, Contribution no. 1218. 5 refs.

Contains an account of the senior author's botanical work during Apr.-Sept. 1951 in the Alert region, the area surveyed extending 82°25'N.-82°32'N. and 61°15'W.-63°40'W. Previous botanical observations on the northern coast of Ellesmere are noted. Topography, geology, climate, and vegetation are described in some detail, with tabular summary of weather records in northeast Ellesmere, and phenological data from four stations in the Canadian Eastern Arctic: Alert (82°29' N. 62°15' W.), Chesterfield Inlet (Keewatin District, 63°40' N. 90°40' W.), Coral Harbour (Southampton Island, 64°09' N. 83°05' W.) and Frobisher Bay (Baffin Island, 62°35' N. 65°30' W.). An annotated list of 56 species is given, 15 of them additions to previous records; table shows arctic and Ellesmere Island northern limits of 34 species. **Copy seen:** DGS.

28342. BRUN, ESKE, 1904- . Danish expeditions to West Greenland, 1950. (Polar record, July 1952. v. 6, no. 44, p. 521-22)

Contains note on work done by geological, geophysical, mining, archeological

and ethnological, zoological, ornithological, and marine biological groups during spring and summer 1950. Areas visited included Godthaab, Grønnedal, and Igalliko in southwest Greenland, Disko, Nûgssuaq, Umanak Fiord, and Godhavn areas in West Greenland, Angmagssalik and Scoresby Sund in East Greenland, and Thule in northwest Greenland.

Contains popular account of the royal visit June 30-Aug. 19, 1952, calling at west coast ports on the *Dannebrog*.

Copy seen: DLC.

28346. BRUN, ESKE, 1904- . Vor opgave i Grønland. (Grønland, 1952? hefte 1, p. 8-12, illus.) **Title tr.:** Our mission in Greenland.

Contains brief popular review of circumstances contributing to the historical discrimination between Greenlanders and Danes. In the background from the time of Hans Egede's work (1737) lay the assumption that the Greenlanders were a poor and intellectually limited people, their interests and capabilities confined to sealing. With climatic changes in the 20th century, sealing has been supplanted by fisheries, new techniques and a more diversified economy introduced. Social and educational developments: schools, trade, free elections, etc., have been obliterating distinctions between Danes and Greenlanders. The latter tend now to be fishermen, farmers, laborers, professional workers just as are the Danes. Danes working in Greenland however, are paid at a somewhat higher basic rate to compensate for working overseas and this is understood by Greenlanders.

28350. BRUNS, FRIEDRICH, and others. Untersuchungen zur Pharmakologie der Wärmeregulation, I. Über den Wirkungsmechanismus und die Angriffspunkte der Narkotika, Krampfgifte und Antipyretika. (Naunyn-Schmiedeberg's Archiv für Pathologie und Pharmakologie, 1950. v. 209, no. 2-3, p. 104-129, illus., tables) 31 refs. **Other authors:** Fritz Hahn and Willi Schild. **Title tr.:** Investigations on the pharmacology of thermoregulation, I. On the mechanism of action and points of attack of narcotics, cramp poisons and antipyretics.

From the literature and their own studies, the authors demonstrate the fundamental difference in the activity of "fever poisons" (pyrifer) and "chill poisons" (piertoxin, and cardiazol). The action of the latter group is essentially inhibitory, not dependent on the kind of narcotic, and activated in sub-narcotic doses by certain other narcotics (veronal). The cooling of the organism by "chill poisons" appears to be effected by elimination of an extensive, not too specialized regulatory mechanism of the central nervous system. The antagonistic, synergistic and other relations in the effect of the above and several additional narcotics (pyramidon, urethan, etc.) is also studied.

28351. BRUNS, WALTHER, 1889- Der Begriff des "freien Luftraums" im Völkerrecht. Würzburg, Verlag Konrad Tritsch, 1932. 68 p. 184 refs. **Title tr.:** The notion of "free airspace" in international law.

Includes (p. 36-42) a summary and criticism of the arctic sector doctrine and practice of Soviet Russia, as having no foundation in international law, and as endangering the freedom and development of navigation over the Arctic.

Copy seen: DLC.

28352. BRUNT, Sir DAVID, 1886- The reactions of the human body to its physical environment. (Royal Meteorological Society. Quarterly journal, Apr. 1943. v. 69, p. 77-114) 40 refs.

Contains text of a presidential address delivered before the Society, Jan. 20, 1943. Extensive data on the response

of man to climate are presented in the course of a comprehensive discussion of: heat production, regulation and balance; skin temperature; heat loss and ways of heat loss; effects of clothing, of humidity and wind; comfort, health and efficiency; acclimatization; effect of sun rays, and of altitude.

Copy seen: DLC.

28353. BRYANT, CHET. Airport construction in Alaska. (Pacific builder and engineer, Aug. 1942. v. 48, no. 8, p. 46, 48)

"Caterpillar tractors and Wooldridge scrapers were moved under their own power as far as 750 mi. from the landing port to interior airfield sites. Supplies and equipment were hauled by tractors on freight sleds, and freighted by planes as soon as landing strips were prepared by the caterpillars. Airfield construction on permafrost involves the removal of a 3 to 5-in. thawed layer in the summer and refilling with gravel. Difficulties encountered on various soil types are described."—SIPRE. **Copy seen:** DLC.

28354. BRYANT, CHET. How Fairbanks prevents its sewers from freezing. (Pacific builder and engineer, Mar. 1942. v. 48, no. 3, p. 46-47, illus.)

"The Fairbanks sewer system includes 8 mi. of wood stave pipe, 6 to 24 in. in diameter laid from 4-10 ft. below ground that is mostly permafrost. The ditches are backfilled with packed sandy silt. Steam thawing of the frozen lines was costly and inadequate for keeping the system operating. In the fall of 1941, 20,000 ft. of iron wire were installed in sewer laterals and feeder lines. Currents of 110 v. and 220 v. are used for thawing circuits. Switches, mounted on power poles at street intersections, are turned on and off at intervals necessary to keep the sewers open."—SIPRE.

28357. BUCHANAN, JAMES LAW-RENCE, 1921-, and others. Observations on the direct effect of cold on blood vessels in the human extremity and its relation to peripheral vascular disease. (Surgery, Jan. 1952. v. 31, p. 62-73, 6 fig., table) 20 refs. *Other authors:* J. J. Cranley and R. R. Linton.

Contains a study on the reaction to cold in patients with obliterative arterial diseases and sympathectomized extremities. Considerable variation in the reaction of the blood vessels in such extremities is shown, more advanced cases generally exhibiting vasoconstriction at higher temperatures. Supporting investigations suggest that this response in the patients is probably due to the reaction of cold on the smooth muscles of the arterials and the production of local vasoconstrictor metabolites.

Contains text of a lecture based on the author's observations and other sources and dealing with the general effects of low temperature on the organism, the role of the thyroid and adrenals on temperature regulation, the carbohydrate metabolism at low environmental temperature, and the pathological effects of hypothermia.

Copy seen: DSG.

28363. BÜCK, FRITZ. Novocaininfiltrationen des Sympathicus als Frühbehandlung der Erfrierungen der Gliedmassen. (Chirurg, June 1943. Jahrg. 15, Heft 12, p. 347-52, 7 fig.) 8 refs. **Title tr.:** Novocain infiltration of the sympathetic nerve as early treatment of frostbite of the extremities.

Contains an account dealing with: the role of vasoconstriction in pathogenesis of frostbite, methods of checking it by interference in the sympathetic nervous system; and, a description of infiltration of the stellar ganglion and of the lumbar cord. The therapeutic success of the method is discussed and illustrated. Abstracted by R. Greene in *Bulletin of war medicine*, Mar. 1944, v. 4, no. 7, p. 380-81.

Copy seen: DSG.

28364. BÜTTNER, GEORG. Über die Behandlung und Zurichtung von Erfrierungstümpfen. (Archiv für klinische Chirurgie, Nov. 7, 1944. Bd. 206, Heft 3, p. 512-27, fig.) 21 refs. **Title tr.:** The management and preparation of frostbite stumps.

Contains a study of amputation and amputation techniques of the leg, following cold injuries. The views and methods of zur Verth are rejected as antiquated and inapplicable, and methods are proposed for a maximal preservation of parts and functions of the lower extremity. Attention is also drawn to the treatment of the stump (to ensure a smooth functioning with or without prostheses), including wound healing, plastic surgery, reamputation. Main types of recommended amputations are

discussed. Abstracted by I. Aird in *Bulletin of war medicine*, Feb. 1946, v. 6, no. 6, p. 278.

28365. BÜTTNER, KONRAD, and others. Das Anfrieren der Haut an kalten Metallen. (Deutsche Militärarzt, Jan. 1944. Jahrg. 9, p. 18-20) Other authors: A. Frank and J. Bolze. **Title tr.:** Freezing of skin on contact with cold metals.

Contains an account based largely on self-experiments. Skin was found to freeze to metals and semi-conductors rapidly; when not removed quickly, skin or epidermis is lost. Polished, lacquered surfaces or those electrolytically covered with other metals act rapidly; rough, rusty, icy or blank surfaces act slowly or not at all. The physical basis of the phenomenon is discussed and safety measures given.

Contains abridged text of lecture before Det Grønlandske selskab, Oct. 13, 1949, dealing with the psychology of Greenlanders. Their shyness, a simple and practical mode of thought, depth of feeling and an almost hysterical or ecstatic reaction under certain circumstances, are explained in terms of the Greenlandic way of life. These traits are presented as representative of problems to be considered in the process of Greenlanders' adaptation to the more advanced culture of Europeans and Americans.

283 3. BUNKIN, N. A. Voprosy sanitarnago obespecheniâ lyzhnoi podgotovki. (Voennno-sanitarnoe delo, 1938. [v. 10] no. 1, p. 36-40) *Title tr.*: Problems of medical safeguards during ski training.

Contains sections on the military significance of skiing; the demands of skiing on the human organism, especially the heart; the importance of gradualness in ski training; extent and speed of marches; provision of rest periods; meals; clothing; shoeing; prevention and treatment of accidents, etc.

Copy seen: DLC.

28374. BURCH, G. E., and others. Objective studies of some physiologic responses in mild chronic trench foot. (Johns Hopkins Hospital, Baltimore. Bulletin, 1947. v. 80, p. 1-70, 22 fig., 11 tables) 10 refs. *Other authors:* H. L. Myers, R. R. Porter, and N. Schaffer.

Contains an account of an investigation on the possible existence of objective responses, which would aid in determining whether patients with past trench foot are still showing evidences of the disease. It was found that the initial temperatures of the foot in mild chronic cases was higher than in normal subjects and there was a direct correlation between the

severity of the case and height of this temperature. Patients also showed a fall in temperature after circulation of the foot was occluded and a rise in reactive hyperemia after release of circulation which were much greater than the normal. They did not adapt to environmental cooling like the normal or psychoneurotic controls. **Copy seen:** DLC.

28375. BURCH, G. E., and others. Rate of water loss from the skin of the foot of normal and trench foot subjects. (American journal of physiology, June 1946. v. 146, p. 370-75, fig., 2 tables) 7 refs. Other authors: H. L. Myers, R. R. Porter, and N. Schaffer.

Contains a report on a study of 25 patients five or more months after injury, with 25 normal subjects as controls. All patients were mild cases with no evidence of tissue loss or abnormalities, but some with slight edema, pain on walking and discoloration of skin. There was no difference in the rate of water loss (perspiration) from the plantar and dorsal skin of the feet of patients and normal subjects. It is therefore concluded that measurements of water loss from the feet cannot be employed to detect a return to normal in mild chronic trench foot. **Copy seen:** DLC.

Contains notes made by the senior author during summer and autumn 1949 while a member of a Canadian Geographical Branch party led by T. H. Manning. The expedition sailed on the *Nauja* north from Moosonee, Ont., through James Bay, along the east coast of Hudson Bay, through Hudson Strait and Foxe Channel to Foxe Basin, south by Frozen Strait, Roes Welcome Sound, and west coast of Hudson Bay to Churchill, Man. Topographic and geologic notes are given on 36 localities. Fossils collected in several localities were identified and listed by A. E. Wilson.

28400. BYERS, FRANK MILTON, 1916- . Orogenic significance of two volcanic suites at Umnak Island, Alaska. (Geological Society of America. Bulletin, Dec. 1952. v. 63, no. 12, pt. 2, p. 1323)

Contains abstract of a paper presented at the Apr. 1952 meeting of the Society, Tucson, Arizona. In the northeast part of Umnak is a "low shield volcano of plateau basalt affinities" with no hypersthene, while two hypersthene-bearing andesite cones are found in southwest Umnak. The two contrasting petrographic suites are described and their origin suggested.

Copy seen: DGS.

28401. BYERS, FRANK MILTON, 1916- . Silica-variation diagrams, northeastern Umnak Island, Alaska. (Geological Society of America. Bulletin, Dec. 1953. v. 64, no. 12, pt. 2, p. 1500)

Contains abstract of a paper presented at the March 1953 meeting of the Society, Stanford Univ., Calif. The diagrams are based on analyses of six porphyritic Quaternary lavas from northeast Umnak, eastern Aleutians. Lavas range from olivine basalt (46 percent silica) to rhyolite (73 percent silica). Percentages are given for magnesia, lime, iron, soda, potash, and alumina for the various lava types.

Copy seen: DGS.

28402. BYERS, FRANK MILTON, 1916- , and T. F. W. BARTH. Volcanic activity on Akun and Akutan Islands. (In: Pacific Science Congress. 7th, New Zealand, 1949. Proceedings, v. 2, Geology, pub. 1953. p. 382-97, illus., 6 text maps, 4 tables) 13 refs.

Contains results of studies made during summer 1948, part of the Aleutian volcano investigations of the U. S. Geological Survey. The islands, each with several volcanic centers, are in the eastern part of the Aleutian Chain (54°08'-10' N. 165°30'-54' W.) and are composed of late Tertiary and Quaternary

andesite and basalt. Each island is described and a history of volcanic and thermal activity given. On Akun thermal activity has "essentially ceased"; future volcanic activity is not expected. Akutan Volcano on western Akutan is very active, major eruptions occurring at approximately 20-year intervals, the latest in Jan. 1947. Chemical analyses of fissure fillings, volcanic ejecta, and hot spring waters are given.

Notes by a staff member of the Kamchatka Volcanological Station on its current work on the Klyuchevskaya group. The recent five-year eruption of Shiveluch which began in 1944, and visits to its active crater in 1949 and 1950, the eruption of Klyuchevskaya Sopka, and a trip to the crater of Tolbachik volcano are described, partly in excerpts from a diary; illustrated by photos of the eruption taken at various distances.

28404. BYLUND, ERIK, and Å SUND-BORG. Lokalklimatets inverkan på bebyggelsens läge i Arvidsjaurs socken. (Ymer, 1952. Årg. 72, häfte 1, p. 1-30, 12 illus. incl. diags., 2 text-maps) 20 refs. *Title tr.:* Influence of local climate on location of settlements in Arvidsjaur parish.

Contains a discussion of why the colonization of Arvidsjaur parish (65°-66° N. lat in Swedish Lapland) was shifting about 1750-1820. It is shown that the settlers moved dwellings and broke new land higher up the mountain slopes and/or on the strips of land between large lakes in order to eliminate frost risks. The investigation is based on historical documents and on field observations by means of thermograph and minimum thermometers as well as on temperature registrations at various localities within the parish. The influence of local temperature and other climatic factors determined the sites of dwellings and pattern of the farming system. Summary in English.

28405. C., P. Le "Croiseur des Neiges," véhicule automobile de l'expédition antarctique de l'admiral Byrd. (Génie civil, June 22-29, 1940. t. 116, p. 385-87, illus., diags.) *Title tr.:* The "snow cruiser," automotive vehicle of Admiral Byrd's Antarctic Expedition.

"The vehicle constructed in 1939 consists of a Hi-metal body with electrically welded assemblings. Hi-metal contains Mn, Si, Cu and Ni and little carbon; its shock resistance at -45° C. is 15 times that of ordinary metal. The construction of the vehicle is described. Power is provided by two 6-cylinder Cummins heavy oil motors with General Electric dynamos. The wheels, weighing 3 tons each are mounted on Timken roller bearings of 58 tons load capacity each. The hydraulic brakes are applied by separate pedals for front and rear wheels. A 450-m. cable winch hauls the vehicle up steep slopes, unloads the airplane carried and holds the spare tires. A total of 9,500 l. of heavy oil for the Diesel motors and 4,000 l. of gasoline for the airplane is carried. The scientific equipment includes a recording seismograph, a gravimeter, and apparatus for ice studies, magnetic, meteorological and soil measurements. The vehicle has a radio station with 2 transmitters and 2 receivers. Both vehicle and airplane are supplied with direction-finders."—SIPRE.

28406. CABANES, BERNARD. Alpinisme polaire: L'expédition Maillard au Spitzberg. Paris, Amiot Dumont, 1951. 229 p. illus. maps.

Contains a popular account of a French mountaineering expedition to West Spitzbergen during July-Oct. 1950. The six-man party was led by Claude Maillard; its purpose was to climb Mt. Général-Perrier, a peak seen during the ascent of Newtontoppen in 1946. The journey, life on Spitzbergen, and the coal-mining are described; the story of the ascent is told, with excellent photographs.

Copy seen: CaMAI.

28407. CABANES, BERNARD. Spitzberg, vie et mort d'un continent glaciaire. (Géographia, July 1952. No. 10, p. 23-31, 6 col. illus., 2 maps) *Title tr.:*

Spitsbergen, the life and death of a glacial continent.

Contains popular treatment of Spitsbergen as the remnant of a glacial continent like Greenland. The various islands of the archipelago and their glacier systems are described, and glacier régimes and factors in present glacial recession discussed. Coal deposits and mining are briefly noted. The author was a member of L'Expédition Maillard au Spitzberg, 1950.

28408. CABIZZA, ANTONIO. Risultati conseguiti con fisioterapia negli esiti di congelamento ed interventi su arti congelati. (Congresso Nazionale di Chirurgia di Guerra, Roma, Atti, May 24-26, 1942, *pub.* Rome, 1943. p. 246-48)
Title tr.: Results obtained with physiotherapy in frostbite sequels and in interventions on frozen limbs.

Contains an account on the physiopathology of frostbite, and of the methods applied by the author. These consist of prolonged soaking in a bath of 37° C. rising gradually to 41° C.; the bathing fluid is a hypertonic salt solution, with a slight addition of citrosyl. Infected areas are subsequently dusted with sulphonamide and covered with a cod-liver salve. As a result early disappearance of pain and paresthesia, and lessening of edema, were observed. Similar baths were applied following operative interventions.

28409. CADE, STANFORD. War surgery in the Royal Air Force. (British journal of surgery, July 1944. v. 32, no. 125, p. 12-24, fig. 11-17)

Contains an account of the surgical treatment "from the time of injury in the aircraft to the final disposal and return to duty". Includes a section on frostbite and cold immersion (p. 19-21), illustrated, dealing with clinical aspects, causative factors, incidence, treatment, etc. Brief case histories of all degrees of frostbite are given.

Copy seen: DSG.

28410. CADE, TOM J. The influence of food abundance on the over-wintering of pine grosbeaks at College, Alaska. (Condor, 1952. v. 54, no. 6, p. 363)

Author's observations for two winters indicate that the pine grosbeak, *Pinicola enucleator*, regularly over-winters in the vicinity of Fairbanks and College, central Alaska, but in highly varying numbers,

apparently depending upon the abundance of winter food.

Copy seen: MH-Z.

28411. CADE, TOM J., and J. L. BUCKLEY. A mass emigration of sharp-tailed grouse from the Tanana valley, Alaska, in 1934. (Condor, 1953. t. 55, no. 6, p. 313)

The author states that *Pedioecetes phasianellus* was very abundant in the Tanana valley during the early 1930's, and the population built up to a peak in 1934. One day in October 1934, the great number of them suddenly arose en masse and flew off toward the mountains. Nothing was ever learned of the fate of the emigrating birds; this grouse has not been a common bird in interior Alaska since then.

28412. CADE, TOM J. Notes on the activity of shrews along the Yukon River. (Journal of mammalogy, Feb. 1953. v. 34, no. 1, p. 120-21)

Contains some observations on shrews (*Sorex obscurus*) made during the summer 1951 between Dawson and Circle, including frequency, food, enemies, swimming ability, etc.

Copy seen: DSI-M.

28413. CADE, TOM J. The peregrine falcon in the Yukon valley. (*In:* Alaskan Science Conference . . . 1951. Proceedings, *pub.* 1953, p. 330-34) 15 refs.

Contains a report of observations made in midsummer 1951 in the Yukon valley between Dawson and Circle. Data on population density, habitat, etc., are given and earlier findings discussed.

Copy seen: CaMAI; DLC.

28414. CADE, TOM J. Sub-nival feeding of the redpoll in interior Alaska: a possible adaptation to the northern winter. (Condor, 1953. v. 55, no. 1, p. 43-44, illus.)

Contains an account of author's observations on the way these, and possibly other, birds feed during the winter. Tunnels in the snow cover created by drifts and apparently by the birds themselves give access to the ground and the seeds scattered thereon, which make up the birds' food. Their food throughout the year (seeds of alders, birches, lamb's-quarters, etc.) is noted. The "ecological and behavioral plasticity" of this arboreal species is of definite survival value in the northern environment.

28416. CAFFEY, JOHN P., 1895- . Chronic poisoning due to excess of vitamin A; description of the clinical and roentgen manifestations in seven infants and young children. (Pediatrics, Apr. 1950. v. 5, p. 672-88, 9 fig.) 12 refs.

Contains an account of clinical manifestations, roentgenographic changes in the skeleton, and elevation of blood vitamin A, caused by excessive intake of the latter and of vitamin D. The differential features of vitamin A poisoning and infantile cortical hyperostosis, the minimal pre-clinical latent period, and the minimal toxic daily dose in vitamin A poisoning are discussed. In healthy children over-administration of vitamin A is believed to be more hazardous than vitamin A deficiency.

28425. CALLOWAY, E. B., and H. S. KAMINSKI. Ice thickness forecasting as applied to Baffin Bay - Davis Strait area. [Washington], 1953. 11 p. tables. (U. S. Navy. Hydrographic Office, typed manuscript)

"Methods to determine the time required for the water surface to freeze, and to compute the thickness of the ice accretion from predicted weather con-

ditions are discussed. The date of the first freeze is determined from the time required by the water mass to reduce its temperature to the f. p. by convection. No freezing occurs if the freezing season is over before the surface temperature is reduced to the f. p. Vertical mixing reaching deeper and deeper produces a homogeneous water column down to the depth where convection ceases. The length of time needed to bring the surface layer to the f. p. depends on the vertical density distribution. The date of the first freeze at a given location in the Davis Strait from an oceanographic sounding taken on Aug. 11 is computed. The methods used by A. G. Kolesnikov and Olaf Devik to determine ice thickness are reviewed. The thickness may be computed from a formula based on Fourier's heat conduction equation, or from graphs consisting of parametric curves of ice thickness when no snow cover is present and the original ice thickness is neglected. The rate of ice growth diminishes as the ice thickness increase becomes a linear function of time. The first 50 cm. develop in about 18 days with an average temperature of -20°C . The ice growth becomes a linear function of time sooner if a snow layer is present. A 10-cm. increase of ice thickness occurs in 8 days when no snow is present, in 14 days with a 20-cm. snow layer, in 20 days with a 40-cm. snow layer, and in 32 days with a 50-cm. snow layer."—SIPRE.

28427. CAMPBELL, ÅKE, 1891- Från vildmark till bygd; en etnologisk undersökning av nybyggarkulturen i Lappland före industrialismens genombrott. Uddenvalle, Bokförlaget Hermes, 1948. 272 p. illus. (Landsmåls- och folkminnesarkivet i Uppsala. Skrifter, ser. B:5) **Title tr.:** From wilderness to settled country. An ethnological investigation of the culture of the settlers in Lapland before the heyday of industrialism.

Contains a study of Swedish pioneers who settled in Lapland, and of culture contacts between these settlers and the indigenous Lapp population. During the Middle Ages and to the end of the 17th century, Lapland was the country of the nomadic Lapps devoted to hunting, trapping, fishing, and reindeer-breeding. When Swedish colonization was encouraged in 1673, 1695 and 1749, the pioneers were at first trappers and reindeer breeders, and later developed stock farms and crop cultivation. The causes of contention between the Lapps and the Swedes are discussed as well as the development of some mutual adjustment and economic cooperation. A serious source of friction was the increase of the settlers' ownership of reindeer herds, and the reduction of the formerly independent Lapp to a dependent herdsman, a trend halted by the law of 1928. The use of alcoholic spirits by the Lapps led to abuses which were largely remedied by the introduction of coffee. Some adoption of cultivation methods by the Lapps themselves is reported. The author based his study on eight years of field work and travels in Lapland during 1941-48.

28440. CANADIAN MINING JOURNAL. Iron Ore Company of Canada. (Canadian mining journal, Apr. 1952. v. 73, p. 152)

Summarizes development in 1951 at the Company's iron ore property in Labrador-Quebec. **Copy seen:** DLC.

28441. CANADIAN MINING JOURNAL. Mining activity in the Northwest Territories. (Canadian mining journal, Feb. 1952. v. 73, p. 79-80, illus.)

Describes mining developments in 1951. **Copy seen:** DLC.

28442. CANADIAN MINING JOURNAL. Moving a town 165 miles northward. (Canadian mining journal, Mar. 1952. v. 73, p. 77-80, illus.)

Contains account of the winter moving of a whole town from the now exhausted copper-zinc mines of Sherritt Gordon mines, Ltd., at Sherridon to a new nickel-copper mine of that company at Lynn Lake, Manitoba, by the Patricia Transportation Co. of Winnipeg. The tractor trains, route, reestablishment of dwellings on the new site is described.

Copy seen: DLC.

28443. CANADIAN MINING JOURNAL. Sherritt Gordon Mines. (Canadian mining journal, June 1952. v. 73, p. 112, 116, 118, 120)

Contains extended discussion of operations at the Sherritt Gordon Mines Ltd. in 1951, and a description of transfer of the company's operations to Lynn Lake, Manitoba; from the annual report of the company. **Copy seen:** DLC.

28444. CANADIAN MINING JOURNAL. Unique communication system. (Canadian mining journal, June 1953. v. 74, no. 6, p. 68)

Contains note on the communication system to be used on the Quebec North Shore and Labrador Railway between Seven Islands and Knob Lake. Switching, ore dumping, and other operations will be done by remote control, and electronic communication facilities will be provided for communities along the railway. Problems of design, installation, and maintenance are discussed.

28451. CARLES, L. MARCEL, 1903- . Climatologie de l'inlandis Groenlandais. (La presse thermale et climatique, Mar.-Apr. 1953. no. 3-4, p. 1-14) **Title tr.:** Climatology of the inland ice of Greenland.

Contains a discussion of the climate of the Greenland icecap and its effect on man. Climatological observations were made during the first winter, 1949-1950, at the Central Station of Expeditions Polaires Françaises (P.-É. Victor); physiological observations were made over a period of two years on about forty persons in the expedition. The physical features of the icecap are noted. Temperature, atmospheric circulation, humidity, and electricity are discussed and observation data cited. The climate is characterized by habitually low temperatures subject to rapid changes often

of wide range, by frequency of storms, and by the alteration of a long winter night and long summer day. Pathological cases due directly to climate were rare. This is believed to be the result of atmospheric dryness and electricity, freedom from bacteria, and the quality of solar radiation. **Copy seen:** DLC.

28452. CARLES, L. MARCEL, 1903- . Rapport médical général. (In: Expéditions polaires françaises. Expédition arctique, 1948-1951. Campagne au Groenland 1951; rapports préliminaires 1953. Série scientifique no. 16, p. 153-55) **Title tr.:** General medical report.

Three doctors accompanied the summer 1951 expedition to the Greenland inland ice, R. Gressard with seismic group "Blue," M. Carles with seismic group "Red," and P. Chanclu at the Central Station. Medical equipment and services during the voyage to Greenland and on the inland ice are briefly described. Valuable equipment was returned to France at the close of the season, the rest stocked at Camp I. **Copy seen:** CaMAI.

28454. CARLSON, HARRY, and M. S. KERSTEN. Calculation of depth of freezing and thawing under pavements (In: National Research Council. Highway Research Board. Bulletin 71, 1953, Soil temperature and ground freezing, p. 81-98, 3 diagrs., 8 graphs, 6 tables) 3 refs.

"Several years' measurements of ground temperatures beneath paved runways at three sites in Alaska [Northway Airfield, 230 mi. southeast of Fairbanks; Eielson

Air Force Base, 26 mi. southeast of Fairbanks; and Fairbanks Research Area, two and one-half mi. northeast of Fairbanks] were utilized to determine depths and rates of penetration of frost and thaw. A theoretical method . . . is given for calculating frost and thaw penetration . . . Computed results are compared with the thermocouple measurements. The depth of frost and thaw penetration may be computed within an accuracy of 1-3 ft. where actual penetration is 6-15 ft., provided adequate soil and air temperature data are available."—SIPRE. Discussion by H. P. Aldrich, Jr., and H. M. Paynter, p. 95-98. *Copy seen:* DGS.

28455. CARLSON, HARRY, and L. A. NEES. Discussion of pile foundations for large towers on permafrost. (American Society of Civil Engineers. Proceedings, 1952. v. 78, separate No. D-103, 3 p.)

"Tests and studies on pile foundations design for sites in arctic and subarctic regions are discussed. Inquiries into the reported failure of tests involving a steel pipe are made. The effects of the diam. and depth of imbedment of the pile specimen in the frozen ground on the unit adhesive force are discussed. For a given temperature differential and length of pile, a steel pipe would transmit to the ground about 75 times more heat than a wooden pile. An anchorage to resist uplift in the annual frost zone is discussed. Anchors with a diam. of at least 3 times the pile diam. are suggested for steamed-in piles. An increase of the pile length of drilled-in pipes to counteract probable forces developed by surface freezing is recommended."—SIPRE.

Copy seen: DLC.

28456. CARLSON, HARRY. Stability of foundations on permanently frozen ground. (International Conference on Soil Mechanics and Foundation Engineering, 2d. Proceedings, 1948. v. 4, p. 51-62, illus., graphs; v. 6, p. 115-17, illus., graphs, diags.)

"Tests were conducted near Fairbanks (Alaska) to determine methods for erecting stable structures in permafrost. Tests indicate that less thawing occurs under a natural vegetative cover than in partially or wholly denuded areas. Artificial insulating materials and deep sand-gravel fills do not appreciably reduce heat transfer into the subgrade. The erection of buildings on piles anchored

in permafrost and the inclusion of an air space under the structure are considered optimum measures for preventing heat transfer into the subgrade and the maintaining of foundation stability. Seven problems peculiar to permafrost are illustrated and briefly discussed by J. D. Lewin."—SIPRE. *Copy seen:* DA.

CARLSON, LOREN DANIEL, 1915- Acclimatization to the cold—physiological mechanisms. See Alaskan Science Conference, Nov 1950. Proceedings, 1951. No. 20117.

28457. CARLSON, LOREN DANIEL, 1915- , and others. Adaptive changes during exposure to cold. (Journal of applied physiology, May 1953. v. 5, no. 11, p. 672-76, illus.) 23 refs. Other authors: H. L. Burns, T. H. Holmes, and P. P. Webb.

Contains a study of six normal, young males, who lived outdoors in temperatures ranging from -5° to -17° C., spending only 4-6 hours daily indoors. Their skin and body temperature patterns seem to confirm the hypothesis, that adapted persons keep extremities warmer and increase the 'shell' participating in heat loss. This permits the adapted subject to endure cold with less discomfort and loss of manipulatory efficiency and, if able to rewarm periodically, with less demand on metabolism in response to cold. *Copy seen:* DSG.

28458. CARLSON, LUCILE. Luleå and Narvik: Swedish ore ports. (Journal of geography, Jan. 1953. v. 53, no. 1, p. 1-13, illus., 4 text maps, graph, 2 tables) 12 refs.

Contains a general discussion of the problems of iron ore transport from the mines at Kiruna and Gällivare in Norrbotten, Sweden, and description of the port of Narvik ($68^{\circ}22'$ N., $17^{\circ}25'$ E., in Norway). A brief historical summary is given of the building of the "Ore Railroad" from Boden railway center in Sweden to Narvik. The latter, situated on a fjord that reaches within five miles of Sweden, exists only for ore shipment. Before World War II, its population numbered about 10,000. Destroyed as a port by June 1940, it has now been completely reconstructed. Statistics are given for shipping and tonnage of ore carried 1930-1950.

28460. CARPENTER, EDMUND S. Witch-fear among the Aivilik Eskimos. (American journal of psychiatry, Sept. 1953. v. 110, no. 3, p. 194-199.)

Contains a study based on field work June-Nov. 1950, Nov. 1951-Jan. 1952, sponsored by the Arctic Institute of North America and the University of Toronto. Deals with: witch-fear and witchcraft in the past and present; their causes and forms; witchcraft in relation to empirical knowledge, disease and death; schizophrenia and witch-fear (with description of three cases); genetic, social and economic factors in this fear. The Aivilik Eskimos are a branch of the Iglulik and live along Roes Welcome Sound, north of Hudson Bay.

Copy seen: DSG.

28461. CARR, F. S. New arctic Coleoptera. (Canadian entomologist, Aug. 1932. v. 64, p. 191-92)

Contains descriptions of two new beetles collected by O. Bryant, 1929-30: (1) *Bembidion bryanti*, n. sp. from the Mackenzie River near Fort Norman, and (2) *Phyllodecta aklaviki*, n. sp. from Aklavik at the mouth of the River. Differential characteristics are also discussed. Holotypes are in the National Museum of Canada.

Copy seen: DLC.

28462. CARRIGHAR, SALLY. Icebound summer. N. Y., Alfred A. Knopf, 1953. xi, 262 p. illus. text map.

Contains a narrative description of animal, bird, and Eskimo life on the west

and northwest coasts of Alaska, where the author lived for three years, part of the time in the Eskimo village of Unalakleet on Norton Sound. She also visited the villages of Kotzebue on Kotzebue Sound, Shishmaref and Wales on Seward Peninsula, the Point Barrow area, and Gambell on St. Lawrence Island in the Bering Sea, and traveled inland by dog sledge and bush plane. Chapters describe the habits of lemmings (including one on a lemming migration), seals, foxes, polar bears, beluga, killer and hump-back whales, walrus, loons, terns, jaegers, and golden plovers. Descriptions of Eskimo life and hunting are included. *Map* shows the limit of permanent polar ice pack, approximate southern limit of sea ice in winter, and approximate southern limit of permafrost. Illustrated with black-and-white drawings by Henry B. Kane.

28472. CEDERSTROM, DAGFIN JOHN, 1908-, and others. Occurrence and development of ground water in permafrost regions. Washington, D. C., 1953. 30 p. illus., 2 text maps, diags. (U. S. Geological Survey. Circular 275) 132 refs. *Other authors:* P. M. Johnston, and S. Subitzky.

Ground water occurrence is discussed in general and with relation to unconsolidated stream-laid and glacial deposits, the main water-bearing formations in the Arctic. The geographical limits of permafrost in Alaska, Canada, and the U.S.S.R. are noted; and the ways in which ground water may occur in permafrost regions is discussed in some detail and illustrated by diagrams. Methods of investigation are outlined, stressing geologic and topographic studies, climatological data, and observations of plant and animal life. Recovery of water in permafrost regions is described; drilling equipment and methods, advantages and disadvantages of cable-tool, rotary, jet-drive, and diamond drilling are noted. Water distribution methods in Alaskan and Canadian communities, available literature on ground water and permafrost, methods of geophysical prospecting, and research problems are outlined.

Statistical data of 1926 on the food consumption of the Ostyak population (approx. 1000) of 14 villages are presented and discussed. The importance of fish among their foods is demonstrated, but its consumption could be greatly increased. *Copy seen*: DLC.

28477. CHAMBERLAIN, ALEXANDER FRANCIS, 1865-1914. The Eskimo race, their origin and relations. (Royal Canadian Institute, Toronto. Proceedings, 1887-88, pub. 1889. ser. 3, v. 6, p. 261-337) about 50 refs.

The Eskimo habitat is described, and various theories on the origin of Eskimos and their migrations in prehistoric time

are discussed, author favoring a modified theory of F. Boas. The Eskimo language is illustrated by vocabularies (from various sources) of some twenty Eskimo dialects (p. 294-318). The connection between Eskimo dialects and the languages of various Indian stocks is also demonstrated by comparative vocabularies. Another (Eskimo-Turanian), of over 250 words, is offered to show the relation between the Turanian (Ural-Altaic) languages of northeastern Asia and Eskimo, in support of the view that these languages had a common origin, and that the Eskimos were representative of the parent stock. Archeological, craniological, historical and topographic arguments are also put forward which supposedly favor this theory.

28478. CHAMBERS, CHARLES E. The Aeronautical Chart and Information Center. (In: Alaskan Science Conference, 3d. Alaska mapping programs and needs, a symposium. pub. in Surveying and mapping, Apr.-June 1953. v. 13, no. 2, p. 193-95) 2 refs.

The Aeronautical Chart and Information Center of the U. S. Air Force plans, finances, and helps to compile aeronautical charts of Alaska on relatively large scales. It produces air information publications such as Radio Facility charts and Pilot's Handbooks to supplement maps and charts of the civil agencies who, supported by the Air Force, handle most of the production. Some of the methods of compilation and the sources used are noted. Emphasis is placed on a new Approach Chart series published by the Center and expected to cover the Alaskan coasts by Jan. 1954.

28479. CHAMPY, CHRISTIAN, 1885-, and others. La gelure des pieds et le rôle de la carence B dans cette affection. (Académie de Médecine, Paris. Bulletin, Mar. 5, 1940, t. 123, p. 185-92) 20 refs. *Other authors*: A. Giroud and R. Coujard. *Title tr.*: Frostbite of the feet and the role of vitamin B deficiency in this affliction.

Contains an account of observations on chickens and pigeons made vitamin B₁ deficient and subsequently having their feet exposed to temperatures of 0° to -8°C. A description of neuritis of the feet, evoked by the cold and the deficiency is given, with details of histological

changes especially those in the nerves. Similarities with conditions in man are discussed.

28480. CHANCLU, PIERRE. Rapport médical du groupe central. (*In: Expéditions polaires françaises. Expédition arctique, 1948-1951. Campagne au Groenland 1951; rapports préliminaires, 1953. Série scientifique no. 16, p. 160-67, diags.*) **Title tr.:** Medical report of the central group.

Contains observations on medical equipment and activities during May-Oct. 1951 on the Greenland inland ice. The writer was doctor at the Central Station, July 16-Aug. 23. Desirable medical equipment is also noted. Surgical instruments and conditions for use are discussed in more detail. Health of the group at the Central Station is described, with comments on poisoning caused by exhaust fumes from the weasels, cardiac ailments, and various pains relieved by vitamin B complex. Method of collecting glacial sediments from cryoconite holes, to be tested for bacterial content is described.

28481. CHANG, MIN CHUEH. Resumption of heartbeat in the rabbit embryo after exposure to low temperature. (*Science*, Nov. 6, 1953. v. 118, no. 3071, p. 550-52, table) 8 refs.

Contains a report on preliminary experiments with ten-day-old rabbit embryos removed from the uterus. Treated with glycerol prior to being frozen to -10° C. or -75° C., they resumed heartbeat after being thawed. Not all embryos resumed heartbeat even under the most favorable conditions, but some maintained it two-three days after freezing.

28482. CHAPMAN, L. J. The climate of northern Ontario. (*Canadian journal of agricultural science, formerly Scientific agriculture*, Jan.-Feb. 1953. v. 33, no. 1, p. 41-73, maps, tables) 10 refs.

Contains a study based on sources of the Meteorological Service of Canada covering 45 stations with long term records and information from Port Nelson, Churchill, etc. The purpose of the analysis is "to define those characteristics of the climate that have a bearing on the

fauna and flora of the region, and on the nature of its soils and their cultivation . . . on human living conditions, and the construction and maintenance of buildings and roads." As the longest weather records show only a small rise of the average temperatures during the past century, the present normals are expected to approximate the future climate of the province.

28483. CHAPMAN, SYDNEY, 1888- The geometry of radio echoes from aurorae. (*Journal of atmospheric and terrestrial physics*, 1952. v. 3, p. 1-29, diags., graphs, 3 tables) 9 refs. *Also pub. as:* Alaska. University. Geophysical Institute. Contributions, series A, no. 5.

"It is shown that the points P on auroral rays, whence a radio beam from a station Q can be reflected back to Q, lie on a cubic surface (the echo surface). If the auroral rays are taken to lie along the lines of geomagnetic force, and the earth's field is treated as a centered dipole field. There is an echo surface for each point Q. The nature of the surface is examined in detail, for guidance in the planning of auroral observation by radio reflexions.

"So far as purely geometrical considerations are concerned, a northern station Q can receive echoes not only from the aurora borealis, but also, from above the atmosphere, from the stream of particles descending to the Southern Hemisphere to produce the aurora australis. But it is uncertain whether these streams of solar particles will have sufficient electron density to give observable trans-equatorial (or extra-terrestrial) echoes."—Author's abstract.

28492. CHAVANIER, C. Diagrams for completion of Arctic Polar Chart No. 5965. (International hydrographic review, Nov. 1952. v. 29, no. 2, p. 35-42, diag.)

Contains a discussion and examples of a trans-polar navigation method using a stereographic projection of the Arctic Basin and outline of bordering continents. Through the use of tracing diagrams, the chart may be used as a navigation instrument, eliminating computation. Three problems are given, illustrating the use of chart and diagrams. A similar method is discussed by T. C. Lyon, *Transpolar celestial* . . . 1952, q. v.

Copy seen: DLC.

28493. CHEBOKSAROV, N. N. Antropologicheskoe izuchenie komi. (Moskva. Universitet. Nauchno-issledovatel'skii institut i muzei antropologii. Kratkie soobshcheniia o nauchnykh rabotakh, 1938-39, pub. 1941. p. 11-67, table 18 on p. 71) **Title tr.:** Anthropological investigations of the Komi.

Contains an account of recent investigations undertaken by the Anthropological Institute among the Zyryans and Perimians: in 1931 studies were made in the basin of the In'va River (headed by M. A. Gremitskii) in 1934 the writer and G. F. Debečs investigated the population of the Vychegda River and its tributaries, the Luza and Letka; in 1938-39 the Anthropological Museum organized a survey

of Zyryans in the districts of Udorsk, Izhma, Zhyuzdinsk, and Cherdinsk (headed by the writer). Among the northern Zyryans of Udorsk, Mezen' and Pechora regions, the fair and tall, mesocephalic type of the Nordic race prevails; in the Zhyuzdinsk region (on the upper Kama) a small, dark and brachycephalic stock of the Sub-Laponoid or Viatka-Kama type is found; between these two regions (i. e. on the Vym', Vychegda and Sysola), there is a mixture of Nordic (or East Baltic) and Sub-Laponoid races; among Zyryans of the In'va and Yaz'va, an admixture of the dark and mesocephalic East Mediterranean race can be observed.

28494. CHEBOKSAROV, N. N., and T. A. TROFIMOVA. Antropologicheskoe izuchenie mansi. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1941. vyp. 9, p. 28-37, tables) **Title tr.:** Anthropological investigation of the Voguls.

Contains an attempt to sketch the anthropological type of the Voguls, based on material previously published and on new anthropological data collected by the Severo-Ural'skaii ekspeditsiia in 1939. Field work was done on three groups of Voguls (213 males and 187 females): the strongly Russified cross-breeds of Ust'-Ulsa and upper Vychegda, the Voguls of the Ivdel'sk region (on the upper Lozva and its tributaries), and those of the lower Pelmya and Vagilya in the region of Garinsk. The material on males only is evaluated. The Voguls of Ivdel'sk show a great similarity with the Yeniseians. There are also Vogulian types who have strong affinities with the European or Uralian, and Lapponoid races. Several theories are discussed which might provide explanation of these racial affinities. One fact is certain: the Voguls do not form a single anthropological type.

Copy seen: DLC.

28495. CHEBOKSAROV, N. N. Ètnogenez komi v svete antropologicheskikh dannykh. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1941. vyp. 9, p. 54-48) **Title tr.:** The ethnic origin of the Komi from the viewpoint of anthropological data.

Contains a supplement to the paper of M. V. Taliiskii (q. v.). In recent years, the Anthropological Institute of the

Moscow State University has undertaken a systematic survey of the Zyryans, and 21 local groups have been thoroughly investigated. Three anthropological types are apparent: (1) the transitory type between European and Mongolian forms, termed in the literature the Lapponoid or Uralic type, which is found on the Upper Kama and in the Zhyuzdinsk region; (2) the fair Europoid type of the Baltic cycle with two subdivisions, Nordic and East Baltic, akin to the Scandinavians, which is common mostly in the region of Udorsk, but also found on the upper Mezen', the Vym', Lower Vycheгда, and Pechora Rivers; (3) the dark Europoid type of the East-Mediterranean cycle, found in the basin of the In'va River. Anthropological characteristics of all three types are given and mean measurements for each are presented on a table (p. 57). The author further divides the Zyryan population into northwestern and south-eastern branches, and mentions the migration of the Zyryan people in late historical times, the 16th to 18th centuries.

Copy seen: DLC.

28496. CHEBOKSAROV, N. N. Russkie severa Evropelskoj chasti SSSR. (Moskva. Universitet. Nauchno-issledovatel'skij institut i muzej antropologii. Contains an account on results of anthropological investigations, undertaken by the Anthropological Institute and Museum of Moscow University in 1938-39, and directed by the writer. Racial structure of the Russian population in the regions of Leningrad, Arkhangel'sk, Kirov, and the Komi A.S.S.R. was investigated and anthropometric data taken from about 1134 persons. In racial characteristics of Russians on the middle Mezen' and lower Pechora, the influence of Samoyeds is obvious. The Zyryan influence is noted among the Russians of Zhyuzdinsk region (district of Kirov). A summary of anthropometrical data is given on table 17. *Copy seen:* NN; microfilm in DLC.

28497. CHEKIN, V. ĪA. K voprosu o vliianii meteorologicheskikh faktorov na sosudistyĭ tonus. (Terapevticheskiĭ arkhiv, Jan.-Feb. 1953. t. 25, vyp. 1, p. 71-73) *Title tr.:* Contribution to the

problem of the effect of meteorological factors on vascular tonus.

Contains a report of observations on arterial blood pressure, made in a northern area during a period of large barometric fluctuations on over 500 male subjects. Changes in blood pressure were observed during barometric fluctuations; falling barometric pressure was accompanied by rising arterial, especially diastolic pressure. Hypertonic cases are also briefly discussed.

28501. CHERNETSOV, VALERII NIKOLAEVICH, 1905- . Komandirovka v Berezoṣskii ralon Ostäko-Vogul'skogo okruga, 1935 g. (Sovetskaiä arkheologiya, 1937. no. 3, p. 254-56) **Title tr.:** A mission to the Berezoṣ region of the Ostyak-Vogul district in 1935.

Contains a report on author's archeological and ethnographic investigations, Sept. 8-Nov. 19, 1935, in localities on the Severnaya Sos'va and Lyapin Rivers. Several ancient hill strongholds (*gorodishche*) and burial places were investigated and numerous artifacts (pots, sherds, stone and bone implements, etc.) were secured to a total weight of about 90 kg. The settlements belonged to the Voguls, according to the author, who reconstructs four periods of Vogul settlement, ranging from the first centuries A. D. to the 18th, and extending from the stone to iron age, the bronze age being attributed to the second period. Characteristics of each period are given. In the oldest or the pre-*gorodishche* period, large cave dwellings were used, supposedly inhabited by many families under matrilineal organization and with communal economy.

Contains the story of a settlement of Russian traders and others which flourished for some 75 years (about 1600-1675), then disappeared. Known by a Samoyedic name, Mangazeya, and situated on the River Taz about 300 km. from the mouth, and a few km. above the Arctic Circle, it was a Siberian fur-trade center which developed rapidly into a port and attracted foreign ships. A dangerous competitor to Tobol'sk, it was denounced to the Tsar, forbidden to

trade with foreigners, soon abandoned by the population, then overrun by the taiga. In 1946 an expedition of the author and three women, excavated the site, reconstructed the plan of the town (p. 159) and unearthed remains which reveal its former prosperity and wide commercial relations. Among the finds were ceramics, objects of silver, bronze and iron, pieces of European glass and chinaware, Russian and foreign coins, bones of domestic animals (cows and pigs), the remains of work sites, etc.

28505. CHERNETSOV, VALERII NIKOLAEVICH, 1905- . Ocherk étnogeneza obskikh ñugrov. (Akademiâ nauk SSSR. Institut istorii material'noĭ kul'tury. Kratkie soobshcheniâ, 1941. vyp. 9, p. 18-28, 2 fig.) *Title tr.:* Outline of the ethnic origin of the Ob'-Ugrians.

Contains a review of recent archeological excavations in the region of the lower Ob'. Description is given of neolithic cave dwellings on the upper course of the Lyapin River, a tributary of the Severnaya Sos'va (one cave was excavated by the author in 1935), and at the mouth of Khulyum-Sunt River. These large and deep caves served as winter dwellings for a large matriarchal community and may be as early as about 2000 B. C. On Cape Tiutye-sal (Morzhov), a group of three cave dwellings was unearthed which may be dated about 1000 A. D. They belong to the "arctic neolithic" well-known from northern Europe. Characteristics of this culture are given. Its bearers were physically close to the Paleo-Siberians although they had also some obvious Mongoloid traits. Sites discovered at the mouth of the Poluy River produced about 12,000 artifacts of bone, stone and bronze. Two different cultures met there: with the hunting and fishing culture of the arctic type are mingled elements of a southern steppe culture of the Scythian-Sarmatian type. The author is inclined to believe that the Ugrians belonged to the Scytho-Sarmatian cultural world. Once in the North, they abandoned horse-breeding and adopted the material life of hunters and fishers; their folklore, art and customs, however, preserved remnants of their former acquaintance with the horse; and they brought with them the use of metals (animal figures on metal plates, etc.). About 500 A. D. the Ugrians separated into two peoples, Ostyaks and

Voguls. Their matriarchal culture was succeeded by a patriarchal one, the villages were fortified and the presence of pieces of armor indicates their war-like activity. From about 500 A. D., Voguls and Ostyaks traded with remote southern countries getting ware (mostly silver vessels used for their religious ceremonies) from Iran and Khorezm in exchange for their furs, mammoth ivory and "fish teeth" (walrus tusks?). Relations of the Ob'-Ugrians with Yeniseians and Samoyeds are discussed; shortly after 1000 A. D., the northern Ugrians learned reindeer breeding from the Samoyeds.

28506. CHERNETSOV, VALERII NIKOLAEVICH, 1905- . Zelenaya gorka bliz Salekharda. (Akademiâ nauk SSSR. Institut istorii material'noĭ kul'tury. Kratkie soobshcheniâ, 1949. vyp. 25, p. 67-74, 4 illus.) *Title tr.:* Zelenaya Gorka near Salekhard.

Contains a description of excavations made in 1946 at Mys Zelenaya Gorka (Cape Green Hill) on the River Poluy, 5 km. below Salekhard (Obdorsk). The cultural layer was excavated in two places, two well preserved cave dwellings and remnants of three others were discovered, and several objects found: arrowheads made of bone, reindeer horn and iron, two copper sheets probably used as scrapers, ornaments of bronze, iron knives similar to those used till the present time by Ostyaks and Voguls, etc. A layer of bronze and copper scoria shows that Zelenaya Gorka was once a place for the melting and forging of metals. The site can be dated as approximately 1000 A. D.

CHERNETSOVA, I. IĀ. *see* Chernetsov, V. N., and I. IĀ. Chernetsova. Kratkiĭ mansilsko-russkiĭ 'slovar'. 1936. No. 28502.

28507. CHERNIĀKOV, Z. E. Karta rasprostraneniâ űazykov narodov Severa SSSR. (*In:* űazyk i pis'mennost' narodov Severa, 1937. chast' 1, p. 229-32) *Title tr.:* Distribution map of languages among the peoples of the northern U.S.S.R.

Contains explanatory notes on a linguistic map (which is not included with this publication) compiled by the writer with help of several other authorities in northern linguistics and ethnography. The map was based on the census of 1926 and indicated 26 nationalities. The

names of the peoples, their numbers and chief dialects are listed in this paper (dialects were not marked on the map). Thirteen peoples have their own literature language, based on one of their chief dialects: the Lapps (1,717 persons), Voguls (5,754), Ostyaks (22,306), Yurak-Samoyeds (17,560), Ostyak-Samoyeds (1,630), Tungus (39,487), Lamuts (2,044), Gold (6,745), Udé (2,003), Chukehis (12,331), Koryaks (7,438), Gilyaks (4,076), and Asiatic Eskimos (1,292). Elementary reading books were also published in the Yeniseian and Kamchadal languages. The following peoples have abandoned their native language and adopted that of a neighbor, they still know their origin, however, though only a few old persons, if any, know their original tongue: The Tawgi-Samoyeds (1,000 persons) and Yenisey-Samoyeds (250) have given up their own languages for Yurak-Samoyed; Orochis (646), for Udé; Kamchadals (4,217), for Russian and partly Koryak; Yukaghirs (443), for Chukehi; Chuvantsy (704), for Russian and Chukehi; Aleuts (353), for Russian; Yeniseians (1,428), for Russian; Dolgans (655), for Yakut; Negidalsy (683) for Tungus; Karagas (415) for Russian; and Soyots (299), for the Buryat language.

28509. CHERNIGOVSKIĬ, N. T. O shehelochnom rezerve morskogo l'da proliwa Borisa Vil'kitskogo. (Problemy arktiki, 1939. no. 7-8, p. 123-25, tables, graph) *Title tr.:* The alkalinity of sea ice in the Boris Vilkitskiy Strait.

"Analyses of samples from Vilkitskiy

Strait [between Laptev and Kara Seas] indicate that the relative carbonate contents in sea ice remain fairly constant. The coefficient of alkalinity (the ratio between the alkalinity and the chloride content of the ice) varied due to changes in the chloride content and reached a maximum in ice over 5 years old. Absolute alkalinity values during the fall of 1936 were relatively high. Some samples had a mg. equivalent of 0.831 to 0.901. Maximum alkalinity values were attained during the winter and spring in upper and lower layers."—SIPRE.

28510. CHERNIGOVSKIĬ, N. T. U poliŭsa nedostupnosti. (Priroda, 1943. t. 32, no. 5, p. 33-38, table) 4 refs. *Title tr.:* At the pole of inaccessibility.

"Astronomic, magnetic, meteorological and actinometric observations were made in April 1941 in a region of the Central Polar Basin (83°50' N. lat; 165° W. long.). Sea water temperatures, ice pack movement and salt distribution were measured. Sea water had a temperature of 0°C. and a 3.47 percent salt content at a depth of 295 m., an average wind velocity of 3.6 m./sec. and an average daily temperature amplitude of 5°C. The following actinometric values were recorded: average solar radiation on bright clear days, 406 gm. cal./sq. cm.; direct solar radiation, 291 gm. cal./sq. cm., or 78.5 percent of the theoretically possible 370 gm. cal./sq. cm. About 7 percent of solar radiation is transmitted through a 7-cm. snow layer; 19 percent through a 25-cm. ice layer. Ice less than one year old transmits twice as much solar radiation as old ice."—SIPRE.

28511. CHERNOBROVIN, V. S. Vazhnelshie poleznyie iskopaemye Kol'skogo poluoostrova. (Razvedka nedr, 1933. no. 16, p. 32-35, 2 illus.) *Title tr.:* The most important mineral deposits of the Kola Peninsula.

Contains a general review of various deposits. Apatite-nepheline ore extraction was started in 1930; two concentration plants will produce 30,000 and 750,000 tons annually; ore resources are estimated 1.5 billion tons, and ore reserve with high percentage of phosphoric anhydride content estimated 250 million tons. Iron ores with 34-39 percent of Fe content are prospected near Murmansk and Shonguy, Olen'ya and Loparskaya railroad stations; iron ore resources of

the peninsula generally are estimated at 427 million tons. Some data on non-ferrous, rare earth metals, mica, pyrrhotite and other mineral deposits are given.

28513. CHERNOV, G. A. Arkheologicheskie nakhodki na reke Shchuch'ef. (Akademiya nauk SSSR. Institut istorii material'noy kul'tury. Kratkie soobshcheniya, 1951. vyp. 40, p. 96-104, 3 illus., sketch map) **Title tr.:** Archeological findings on the River Shchuch'ya.

Contains an account of excavations made by the author in 1949 on the banks of the upper Shchuch'ya and the shores of some small lakes in the same region (about 68° N., 67° E.). Nine old sites were unearthed, numerous potsherds covered with hole-comb decoration, and one stone ax were found. Material, shape and technique of making this earthenware are described and the ornamentation investigated. These finds show that the region was inhabited by man since about 2000-1000 B. C. Some old Samoyedic burial places were also excavated and several objects found: brass and bronze plates, pendants in the shape of animals (bear, cat, bird), copper handle of a dagger with engraved figures of men and animals, glass beads, iron knife and ring, etc. In addition, two Samoyedic sacrificial places were investigated which had been in use practically to the present time: reindeer skulls and horns were heaped in piles alongside

wooden idols; several objects were found there: shamanistic drum and bell, a plate of brass and one of bronze, iron grids, etc. Most of these objects are of recent date, e. g. 18th or 19th century, and some quite recent, e. g. bottles and silver coins of 1923 and 1927. Some of the objects however, are obviously much older, e. g. a pendant with a figure of a bear which may be dated as early as the 10th to 12th century A. D.

28515. CHERNOV, G. A. Petrushinskaya stofanka na Srednel' Pechore. (Akademiya nauk SSSR. Institut istorii material'noy kul'tury. Kratkie soobshcheniya, 1951. vyp. 39, p. 81-83, illus.) **Title tr.:** The site of Petrushino on the Middle Pechora.

Contains description of a stone age site, discovered by the author in 1942 near the village of Petrushino. At this place the Pechora's bank is formed of five terraces, and on the fourth, were found three stone scrapers and 50 potsherds, the latter once having formed two clay pots each about 30 cm. in diameter. The potsherds with hole-comb decoration, were similar to those unearthed in the Bol'shezemel'skaya Tundra.

Copy seen: DLC.

28516. CHERNOV, G. A. Stofanki drevnego cheloveka na r. Kolva, Kolva-Vis i Sandibet-fu v Bol'shezemel'skoy tundre. (Akademiya nauk SSSR. Institut istorii material'noy kul'tury. Kratkie soobshcheniya, 1941. vyp. 9, p. 101-111, 5 illus., incl. sketch map) 4 refs. **Title tr.:** Sites of ancient man on the Rivers Kolva, Kolva-Vis, and Sandibey-yu in the Bol'shezemel'skaya Tundra.

Contains a report on the archeological excavations made by the author in 1939 on the River Kolva and its two tributaries. In the 28 sites excavated, a great quantity of stone implements, decorated potsherds (covered with hole-comb pattern) and a few artifacts of bronze, brass and iron were found. The objects discovered are here classified, described and (49) figured. Many of the artifacts (ceramics, etc.) are similar to those found along the White Sea, but some new features are present, e. g. the drawing of the human face. The sites belong to several cultural periods.

Copy seen: DLC.

28517. CHERNOV, G. A. Stofānki drevnego cheloveka v bassejne reki Pechory. (Akademiā nauk SSSR. Institut istorii material'noĭ kul'tury. Kratkie soobshcheniā, 1948. vyp. 23, p. 50-59, 7 illus., incl. sketch map) **Title tr.:** Sites of ancient man in the Pechora River basin.

Contains a report on excavations made by the author in 1940 at the mouth of Pechora River near town of Nar'yan-Mar (about 67° N., 52°-53° E.) on the banks of small rivulets and lakes. Detailed descriptions are given of the 14 sites excavated; the objects found are characterized and 40 are figured: stone tools (arrowheads, scrapers), some iron objects and potsherds (mostly with hole-comb decoration, similar to those on potsherds of the Bol'shezemel'skaya Tundra). The stone objects belong to the third stage of the northern neolithic, according to V. I. Smirnov's classification. Site no. 5, where iron objects and undecorated pottery was found, is only about 300-350 years old; other sites belong to the neolithic period. These discoveries show once more that the far North was inhabited by man very early. The inhabitants of these sites were fishers and hunters.

Copy seen: DLC.

28518. CHERNOV, G. A. Stofānki drevnego cheloveka v severnoi chasti Bol'shezemel'skoi tundry. (Akademiā nauk SSSR. Institut istorii material'noĭ kul'tury. Kratkie soobshcheniā, 1951. vyp. 36, p. 96-114, 6 illus., sketch map, tables) 10 refs. **Title tr.:** Sites of ancient man in the northern part of the Bol'shezemel'skaya Tundra.

Contains description of archeological excavations made by author in 1947 between town of Nar'yan-Mar and Khaypudyrskaya Guba, on the banks of three small rivers, about 67°-68° N.

and 52°-60° E. (map p. 97). The author was supported on his field work by M. I. Shevyrenkova and V. G. Chernov, all members of the geological expedition to the Bol'shezemel'skaya Tundra in 1947, led by the author. Twenty-nine sites were excavated, about 150 flint implements and 432 potsherds, belonging to some 30 vessels were found. Detailed descriptions are given of excavations on the rivulets Kuya (14 sites), Chernaya (8 sites) and Kheybide-Pedara (7 sites) and objects found are sketched, viz. neolithic arrowheads, knives and scrapers of flint, stone ax, and potsherds with hole-comb decoration. Conclusions are drawn that prehistoric man of this region lived on banks of small rivers which served as communication routes; he was a hunter, a catcher of wild geese (on the River Chernaya), but not a fisherman, and he lived around 2000-1000 B. C.

Copy seen: DLC.

28519. CHERNOV, G. A. Zhertvennoe mesto v severnoi chasti Bol'shezemel'skoi tundry. (Akademiā nauk SSSR. Institut istorii material'noĭ kul'tury. Kratkie soobshcheniā, 1951. vyp. 39, p. 84-88, 2 illus., sketch map) **Title tr.:** A sacrificial place in the northern part of Bol'shezemel'skaya Tundra.

Contains a short description of a mound excavated by the author in 1947 on the River Kheybide-Pedara (about 68° N. 60° E.). The cultural layer of the mound contained reindeer skulls and horns (hence, the conclusion that it had been a sacrificial place); numerous potsherds and objects of bronze, iron, and silver, also silver-plated and gold-plated artifacts were discovered: bronze pendants in the shape of animal or bird, women's ornaments (bronze bracelets, beads and pendants, silver pins, etc.), iron knives, javelins, also some coins. The cultural layer was about one meter in depth and may be divided into three levels of different date between 1000 B. C. to 1100 A. D. Pottery of the lowest level has hole-comb ornamentation and is of the same type as that found elsewhere in the Bol'shezemel'skaya Tundra; the ornamentation on pottery from the uppermost level is quite different, being more elaborate and found here for the first time in this region.

Otd. biol., nov. seriia, 1953. t. 58, vyp. 6, p. 27-34, diagrs.) *Title tr.:* Peculiarities in the development and propagation of birds (grey crow) in various geographic zones in the U.S.S.R.

Contains a study of the life cycle of *Corvus cornix* in various zones, including that of northern European Russia (Arkhangel'sk province), with data on weight and dimensions of the adult bird, on the number and weight of the eggs, and number of the young in the various zones. The period of propagation in the North is shorter and the rate of growth is higher than in the southern regions.

28540. CHOZHMOÖR. Izbrannedes o zyřnakh (sgrenakh). (Komi mu, 1928. god 5, no. 1, p. 36-39) *Title tr.:* Izbrannedes on the Zyryans.

Contains comments on the travel diary of Eberhard Izbrannedes, who was sent by the Russian Tsar from Moscow to China in 1692, and passed en route, through some places inhabited by Zyryans.

Copy seen: DLC.

28541. CHRISTENSEN, K. N. Jordbundsundersøgelser i Grønland. (Grønlandske selskab. Årsskrift 1952, p. 56-64) *Title tr.:* Soil investigations in Greenland.

Contains tabulated data (1951) on phosphoric acid and calcium content of soils at several localities in Julianehaab and Godthaab Districts. The investigation shows need of compaction to further the capillarity. The soil temperature was lower in Godthaab than in Julianehaab, and permafrost was encountered 30-40 cm. below the insulating moss cover. Godthaab localities favor reindeer breeding rather than sheep farming. Julianehaab has more and better grazing lands, though the soil requires artificial fertilizer to compensate for lack of nitrogen in the interest of sheep-farming.

Copy seen: DLC.

28542. CHRISTENSEN, K. N. Narssaq, fremtidens by. (Grønlandske selskab. Årsskrift 1952, p. 111-15) *Title tr.:* Narssaq, the city of the future.

Industrial developments at Narssaq (60°54' N. 46° W.) in Julianehaab Distrikt are described: construction of the canning factory, which started operation Mar. 1, 1952, and produced 250,000 tins of shrimp in five months; processing of halibut and other fish products, meat (lamb) canning etc. New housing, full employment and high wages are noted. The town provides good prospects for craftsmen (carpenters, bakers, shoemakers, etc.) willing to settle there.

Copy seen: DLC.

28543. CHRISTENSEN, K. N. Tabet af får i Sydgrønland vinteren 1948-49. (Grønlandske selskab. Årsskrift 1950, p. 109-118, illus.) *Title tr.:* The loss of sheep in South Greenland in the winter of 1948-49.

Contains discussion by a sheep breeder of the conditions of sheep farming generally with stress on measures against loss of stock, and on its recent development in Greenland. The loss of 10,500 head of sheep or 50 percent of the total stock in Julianehaab Distrikt was due to unusually severe conditions in the winter of 1948-49. The main problem is providing fodder for the winter season, and various means planned to improve the situation are discussed. Sheep farmers still paying off their government loans should not keep more sheep than they have winter fodder for. Extension of grazing land and increased yields of hay are essential. Barns and stables ought to be built.

28546. CHRISTIANSEN, REIDAR THORALF, 1886- . Ecstasy and arctic religion. (Studia septentrionalia, 1953. v. 4, pt. 1, p. 19-92)

Contains a study on the "inspired" form of shamanism among arctic peoples, chiefly Eskimos and Lapps, with numerous references to the Paleo-Siberians (Chukchis, Koryaks, Yukaghirs, and others). Arctic religion in general is dealt with, as well as the angekok of the Eskimos, the shamans of the Paleo-Siberians, the shaman in action, his

message, drum and costume. Bibliographical footnotes. **Copy seen:** InU.

28547. CHRISTIE, ARCHIBALD MOWATT, 1914- . Geology of the northern coast of Labrador, from Grenfell Sound to Port Manvers, Newfoundland (report and map). Ottawa, 1952. 16 p. 2 fold. maps. Mimeographed. (Canada. Geological Survey. Paper 52-22) 20 refs.

The maps (scale 1 in.: 4 mi.) cover an area between 56°50' N. and 60° N. Topography is described in some detail, and the Precambrian bedrock discussed. Oldest are the paragneisses, granitoid gneisses, gabbro-anorthosites, and intermediate rocks, all of which are intruded by narrow gabbro dikes. On these Archean rocks rest unconformably the Proterozoic sedimentary and volcanic rocks. Deposits of molybdenite, copper and nickel, graphite, iron sulfides, and magnetite are briefly described.

Copy seen: DGS.

28548. CHRISTIE, ARCHIBALD MOWATT, 1914- . Geology of the southern coast of Labrador from Forteau Bay to Cape Poreupine, Newfoundland (report and map). Ottawa, 1951. 19 p. fold. map, 2 tables. Mimeographed. (Canada. Geological Survey. Paper 51-13) 12 refs.

Contains a description of topography, followed by a more detailed discussion of bedrock geology. Rocks range in age from Early Precambrian (Archean metamorphic and intrusive rocks) to Lower Cambrian (sediments and basalt flows), the most abundant rocks being granites and granitoid gneisses. No mines or active prospects now exist, but further exploration for mica, ilmenite, magnetite, and titaniferous magnetite is suggested.

28565. CLARK, EINA M., and A. J. RHODES. Poliomyelitis in Canadian Eskimos; Laboratory studies, II. (Canadian journal of medical sciences, Aug. 1951. v. 29, p. 216-35, tables)

Contains an account of further laboratory investigations on the immunological aspects of the polio epidemic in the Canadian Eastern Arctic, winter 1948-49. None of the three virus strains recovered from the Eskimos was pathogenic to cotton rats or mice and no Cossackie strains were recovered. Sera from 40 persons (34 Eskimos) involved in the outbreak were examined for the presence of neutralizing antibody to Lansing poliomyelitis virus: antibody was found in the acute phase serum of two out of three patients, and in the convalescent phase serum of about half of those tested. The serum of six of eight healthy Eskimos and five of six white contacts also contained antibody. This paper and the item following, previously listed as No. 21227-21228, are included here for coordination with related material. The first paper in this series was listed as No. 25514.

Copy seen: DSG.

28565A. CLARK, EINA M., and A. J. RHODES. Poliomyelitis in Canadian Eskimos; laboratory studies, III. Lansing antibody levels in Baffin Island Eskimos.

(Canadian journal of medical sciences, Oct. 1952. v. 30, no. 5, p. 390-402, illus., text map, tables) 10 refs.

Sera of 24 Eskimos from Lake Harbour and of 99 from Pangnirtung (both on Baffin Island) have been tested for poliomyelitis antibody, by the Lansing virus neutralization method. Poliomyelitis occurred in Lake Harbour in 1943, but has not been recorded in Pangnirtung. Eighteen of the 24 sera from the first locality contained antibody, but only ten of the 99 from the second place. Data are compared with earlier findings of the authors and others in American Eskimos. The evidence suggests that polio virus has a world-wide distribution.

28570. CLEMENTS, FORREST EDWARD, 1900-. Primitive concepts of disease. (California. University. Publications in American archaeology and ethnology, 1932. v. 32, no. 2, p. 185-252, 6 tables, 4 maps) 229 refs.

Contains classification of disease concepts among primitive peoples and geographical distribution of those concepts, also certain conclusions as to their relative antiquity, probable origin, and historical connections. Five principal concepts as to the cause of a disease are described and discussed: (1) sorcery, (2) breach of taboo, (3) disease-object intrusion, (4) spirit intrusion, and (5) soul loss. Occurrence of these concepts over the world, including regions in-

habited by Eskimos, American Indians, and Siberian peoples are tabulated (p. 193-201), with specific reference to the literature. Geographic distribution of concepts 2 to 5 as shown on maps, includes arctic Eurasia and arctic America. The order of relative age is suggested as 3, 5, 4, 2; the generic idea of concept 1 may be extremely old, but its various forms may prove to be unequal in age. The concept of soul loss traces to a single Old World origin, possibly in Siberia. The Arctic and Northwest Coast occurrences of spirit-intrusion concept are continuous with the Old World distribution. The latest concept, breach of taboo, probably originated independently in Mexico, in the arctic region, and in southern Asia.

28575. COATS, ROBERT ROY, 1910- . Geology of Buldir Island, Aleutian Islands, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1953. 26 p. illus., maps. (U. S. Geological Survey. Bulletin 989-A) 18 refs.

Contains a summary of the physical geography of the island with special emphasis on vegetation, and a detailed description of volcanic and sedimentary rocks, structural and historical geology, and petrography of the volcanic rocks, with tables and diagrams showing analyses. Field work was done by a survey party of two, July 19-22, 1947. The small volcanic island lies in the western Aleutians between Kiska and Shemya and is the westernmost of Aleutian volcanoes active in late Quaternary to Recent times. A large bird population was found including some species not seen nesting elsewhere. Plants were collected and a flora compiled and listed. The limited number of species suggests relative youthfulness of the island.

28576. COCKFIELD, WILLIAM EGBERT, 1890- . Structural features of the Canadian Cordilleran region. (In: Pacific Science Congress. 7th, New Zealand, 1949. Proceedings, v. 2, Geology, pub. 1953, p. 115-28, 3 text maps, cross-section) 14 refs.

The Cordillera is divided into two geologic provinces. In the Yukon and

Northwest Territories, the St. Elias Mts., Yukon Plateau, Pelly, and Ogilvie Mts. are included in the western province; the eastern province includes the Mackenzie, Franklin, and Richardson Mts. Structurally complex sedimentary and volcanic rocks of the western province range in age from Precambrian to Recent and have been invaded by batholiths whose cores are now exposed by erosion. The eastern province consists of folded and faulted sedimentary strata. In the north, folding predominates, in contrast to the primarily faulted Rockies of British Columbia and Alberta. The orogenic history and major faults of each region are discussed in some detail.

28577. CODY, W. J. *Phyllodoce coerulea* in North America. (Canadian field-naturalist, July-Sept. 1953. v. 67, no. 3, p. 131-34, 3 text maps) *Also pub. as:* Canada. Dept. of Agriculture. Division of Botany and Plant Pathology, Contribution no. 1200. 9 refs.

Contains a brief discussion of Hultén's division of arctic and boreal plants into "rigid" and "plastic" types, rigid plants being those which, once removed from large areas by Pleistocene glaciation, lost the power to spread and repopulate those areas; plastic plants did not lose this power. A map by Hultén shows the major elementary areas of circumpolar plants from which rigid species have not spread since the last glaciation. *Phyllodoce coerulea*, occupying almost all these areas, was considered a good example of a rigid species, but recent collections have shown it widely distributed in formerly glaciated areas of North America. Its present arctic distribution from western Alaska, to East Greenland is indicated.

28579. COHLAN, SIDNEY QUEUX, 1915- . Excessive intake of vitamin A as a cause of congenital anomalies in the rat. (Science, May 15, 1953. v. 117, no. 3046, p. 535-36, illus., table) 13 refs.

Animals fed 35,000 I. U. of vitamin A daily from the second, third, or fourth to the 16th day of gestation, carried litter to term in ten per cent of cases, against 88 per cent in controls. More than half of the litters of the hypervitaminosed animals showed gross anomalies in the development of the skull and brain, with most of the forebrain extruded to the surface ("exencephaly"). Some experiments on minimal vitamin A intake, and the critical time of administration, are also briefly reported.

Copy seen: DSG.

28580. COHLAN, SIDNEY QUEUX, 1915- . Excessive intake of vitamin A during pregnancy as a cause of congenital anomalies in the rat. (American journal of diseases of children, Sept. 1953. v. 86, no. 3, p. 348-49) *Abstract.*

Excessive intake of vitamin A from the 2nd, 3d, or 4th to the 16th day of gestation caused a marked reduction in the number of litters carried to term and characteristic malformations among the surviving young.

28582. COLE, ROBERT O. The Yukon River breakup of 1952. (Weatherwise, Aug. 1952. v. 5, no. 4, p. 88-89, illus.)

Contains a brief popular account of the late break-up of May 1952. Factors contributing to break-up of river ice are noted and a summary given of meteorological conditions in the Yukon valley during April and May. *Copy seen:* CaMAI.

28583. COLEMAN, L. C. Mineralogy of the Yellowknife Bay area, N. W. T. (American mineralogist, May-June 1953. v. 38, no. 5-6, p. 506-527, illus., table) 12 refs.

Contains description of minerals found in gold ores of this area on Great Slave Lake, Mackenzie District. Studies were made of 119 polished sections of ores from eight gold properties. The gold ores (gold closely associated with antimony) "represent a type quite different from those found elsewhere in the Precambrian Shield of Canada, if not in all other parts of the world." The geology and general mineralogy of the region are characterized, and descriptions given of the various minerals: pyrite, arsenopyrite, gudmundite, sphalerite, chalcopyrite, pyrrhotite, stannite, galena, stibnite, the sulphosalts, gold, aurostibite, lead, antimony, and secondary mineralization. "The formation of the ores is believed to have taken place during several distinct periods by filling of zones of dilation accompanied by some metasomatic replacement. Each period was marked by the introduction of an ore-forming fluid of a composition dissimilar to those introduced during other periods." The solutions producing mineralization are discussed.

28584. COLLINDER, BJÖRN, 1894- Les Lapons. (Nord, 1942. v. 5, no. 4, p. 293-315) *Title tr.:* The Lapps.

Contains a summary description of the Lapp people and their present-day cultural status. Their facility in adopting cultural achievements of other peoples is noted, from the remote past when they borrowed some 3000 words from Scandinavians, to the present when they utilize such Western inventions as binoculars, sewing machines, hunting guns and boat motors, etc., in their daily life. Theories on the origin of Lapp language are discussed, a sketch of the ancient religion and shamanism is given, and the reindeer breeding as an essential feature of Lapp culture is outlined. The mentality of present-day Lapps, their folk songs and folk art are characterized. Information is given on the national Lapp literature, their native authors,

more recent books and magazines. The Lapps are not dying out, but their native language has been superseded by Swedish or Norwegian among the settled Lapps in two generations.

28585. COLLINDER, BJÖRN, 1894- Lappische Sprachproben aus Härjedalen, nach Nils Axman, Torkel Larsson, Lars Renfelt, Elisabeth Rensberg und Nils Rutfjäll; aufgezeichnet von Björn Collinder, mit einem Abriss der Nominal- und Verbalbeugung. Uppsala, Almqvist & Wiksell [1942] x, 104 p. 3 illus., sketch map. (Arbeten utgivna med understöd av Vilhelm Ekmans Universitetsfond, Uppsala, 50) *Title tr.:* Specimens of the Lappish language of Härjedalen, from the accounts of Nils Axman . . . ; noted down by Björn Collinder, with a sketch of noun declension and verb conjugation.

Contains texts of 24 narratives and 183 single sentences in Lappish and German, noted down by the author in 1941 from the Härjedal Lapps in the region of Mittådalen and Tännäs in Sweden. This is a southern Lappish dialect, near extinction, because used by only a few persons, all of whom also speak Swedish. The texts are photographically reproduced from handwritten ms. of great phonetic precision. Previous works and literature on this dialect are discussed in the introduction. The texts consist of biographical jokes, reminiscences of youth, adventures in hunting and wanderings, narratives from the past, five folk tales, four accounts of reindeer breeding, and a reconstruction of an interesting song with mythological background. Reindeer ear-marks are also described and sketched (p. 39-40).

28587. COLLINS, GEORGE L., and L. SUMNER. Northeast Arctic: the last great wilderness. (Sierra Club bulletin, Oct. 1953. v. 38, no. 8, p. 13-28, 14 illus., text map)

Contains results of a geographical study in summer 1952, of northeastern Alaska and adjacent Yukon Territory, from the Beaufort Sea southward almost to the Arctic Circle, and from 146° to 137° W. long. Scenery of the Brooks Range, foothills, and arctic coastal plain is described in popular style, land and sea birds and mammals seen, and ecological research projects of the Arctic Research Laboratory (Barrow) are listed. History, recreational opportunities, and the future of the region (with emphasis on wildlife conservation) are briefly discussed. Future research problems are outlined.

Copy seen: DGS.

28588. COLLINS, GEORGE L. A survey of the recreation resources of Alaska. (*In:* Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 201-208)

Contains a summary of subjects considered by the U. S. National Park Service in preparing a survey of Alaska's recreation resources, to follow a similar survey on the Alaska Highway in 1944 (*Arctic Bibliography*, No. 18379). Alaskan history, wildlife, geology, business, products, tourism, and town recreation for youth are briefly considered. The U. S. National Park Service cooperates with the Alaska Development Board, the Alaska Visitors Association, the University of Washington Bureau of Business Research, and other private and government organizations.

28589. COLLINS, HENRY BASCOM, Jr., 1899- . On the origin and relationships of the Old Bering Sea culture. (*In:* Congrès International des Sciences Anthropologiques et Ethnologiques. 2d, Copenhagen, 1938. Compte rendu, 1939. p. 297-98)

Contains résumé of a study of the oldest stage of Eskimo culture in Alaska; its successors there, in Canada and Green-

land. While the immediate origin of the Old Bering Sea culture is to be sought in northeastern Siberia, its ultimate roots extend even deeper into the Old World.

Copy seen: DLC.

28590. COLLINS, HENRY BASCOM, Jr., 1899- . Radiocarbon dating in the Arctic. (*American antiquity*, Jan. 1953. v. 18, no. 3, p. 197-203) 30 refs.

Discussion of the results of radiocarbon dating of prehistoric Eskimo and pre-Eskimo sites in Alaska, which author thinks are consistent with the archeological evidence but not with Larsen's and Rainey's theory of Ipiutak as the basic Eskimo culture. Several points of the Ipiutak theory are criticized; the significance and age of Giddings' Denbigh Flint Complex (*see Arctic Bibliography*, No. 5711, 22102) are discussed. This culture, the earliest known from the American Arctic, the author believes to be post-Mankato and at most not more than 8,000 years old. Though the Denbigh culture is much older than the earliest known Eskimo cultures, close resemblances in stone implements indicate a relationship with Eskimo, as well as the Mesolithic of Eurasia, and thus lend support to the author's hypothesis of the Mesolithic origin of Eskimo culture (*see Arctic Bibliography*, No. 3338). Yuma and Folsom-like blades at the Denbigh site may be relics from an earlier period and thus do not show contemporaneity between Denbigh and Folsom-Yuma. The Eskimos' continued use of typical Mesolithic forms of burins, bird and fish spears, and side-bladed arrows and lances points to the significance of the Arctic as a marginal area: "the pattern and development of Eskimo culture are the result of a combination of geographical, ecological, and cultural factors that are truly unique. Culturally as well as geographically, the Arctic has always been a marginal area, a refuge area or reservoir where cultural traits and life patterns inherited from earlier times have persisted long after they have been discontinued elsewhere. Thus, in the isolation of the Arctic the Eskimos have continued what is basically a Mesolithic way of life up to the beginning of the present century. . . . This applies not only to the general configuration of their culture—a hunting and fishing economy that utilized with equal facility the resources of land and sea—but also to specific Mesolithic culture traits. . . ."

28591. COLLINS, HENRY BASCOM, Jr., 1899- . Recent developments in the Dorset Culture area. (In: *Asia and North America, trans-Pacific contacts*, pub. as: Society for American archeology. Memoirs, no. 9; supplement to American antiquity, Jan. 1953, v. 18, no. 3, pt. 2, p. 32-39, illus.)

Contains review of investigations of the Eskimo Dorset culture, first described by Jenness in 1925 (*Arctic Bibliography*, No. 8045). Dorset remains have subsequently been found at many sites in the eastern Arctic from Newfoundland in the south along the coasts of Labrador and the northern Canadian Islands to Inglefield Land in northwest Greenland. "While recent excavations . . . [have added little to] knowledge of the origin of Dorset culture or the role it played in the eastern Arctic, some of the earlier evidence, if reexamined and reappraised is seen to have important implications in connection with recent discoveries in Alaska." Author summarizes present knowledge of Dorset culture and discusses several aspects of the Dorset problem: its relation to Thule and the possibility of the Sadlermiut of Southampton Island being a Dorset-Thule remnant; recent excavations and reinterpretation of earlier work which indicate presence of Dorset culture in all parts of Greenland. Solberg's "Stone age" (*Arctic Bibliography*, No. 16444), previously largely ignored or identified with Thule, is considered by author to be Dorset or closely related thereto. Dorset tools are of chipped stone whereas even the earliest Thule Eskimos in Greenland used little stone of any kind, but non-meteoritic iron apparently of Norse origin; therefore the use of meteoritic iron by the Polar Eskimos was not in substitution for stone (which their ancestors did not possess) but for forged iron formerly obtained from the Norse. The absence of perishable materials in the Dorset-"stone age" middens, in contrast to those of the Thule culture, indicates that the former accumulated during some early warm period when the ground thawed during the summer. "Stone age" implements formerly regarded as drill points or boot-sole creasers, are shown to be burins; these, with lamellar flakes and polyhedral cores, connect with the Canadian Dorset culture and were derived from the ancient Denbigh Flint Complex of Alaska. Related forms of burins, of stone and iron,

are shown to have been used by later prehistoric and modern Eskimos, a striking example of the perpetuation of a Mesolithic tradition.

28594. COMPRESSED AIR MAGAZINE. Ships made of ice. (Compressed air magazine, Aug. 1946. v. 51, p. 224)

"The construction of floating airplane bases of ice (Project Habbakuk)

was considered during the war. Each iceberg carrier was to be 2,000 ft. long, 300 ft. wide, and 150 ft. from deck to keel, displacing 2,000,000 tons, and was to be equipped with diesel-engine plants. The ice was to be reinforced by mixing 86 percent water with 14 percent wood pulp and freezing the mixture to a tough, plastic material of a compressive strength of 1,100 lb., and a tensile strength of 700 lb./sq. in. This mixture, called Pykrete, was produced by rolling the pulp on a flat surface to a uniform thickness of 0.375 in. and freezing it with a cold air blast. Pykrete is highly shock resistant and its bomb resistance is 40 percent that of concrete. An exterior insulating skin with brine-circulating pipes behind it was contemplated. Tests were conducted to determine the effect of heavy waves on the structure."—SIPRE.

28598. CONSTANTINIDES, PARIS. An immediate kidney response to acute stress. (Endocrinology, Oct. 1951. v. 49, no. 4, p. 512-21, illus., tables) 11 refs.

Acute stress, including exposure to 2° - $4^{\circ}\text{C}.$ for 24 hrs., caused immediate enlargement of the kidney in rats. The enlargement is due to mitotic proliferation of the cells of the proximal convoluted tubules. Adrenalectomy largely prevented enlargement and completely inhibited the proliferative process. The renal enlargement is a linear function of the concomitant enlargement of the adrenal. A high protein diet causes a similar kidney enlargement without visibly stimulating the adrenals.

28599. CONSTRUCTION METHODS AND EQUIPMENT. Big top speeds job during winter months in frigid Alaska. (Construction methods and equipment, May 1953. v. 35, no. 5, p. 80-81, 84, 86, illus.)

A 200 x 250-ft. area was excavated to a depth of 15 ft. and the underlying permafrost thawed to 20 ft. below the excavation. The thawing water was heated in a heat exchanger to $90^{\circ}\text{F}.$ and circulated through wellpoint pipes thrust into the ground on 8-ft. centers. The excess water coming to the surface was drained by a 4-in. jet pump. The thawed area was compacted with a 5-ton weight, resulting in an average settling of 3-6 in. A reinforced concrete slab, 3 ft. thick, was placed on the thawed ground. The work was continued during the winter under a 240 x 360-ft. canvas tent kept at $45^{\circ}\text{F}.$ by 18 heating units. Holes resulting from thawed ice pockets in the permafrost were refilled

before construction began."—SIPRE. The work was done by Lytle-Green-Birch construction companies, for an extension to the power plant of the Ladd Air Force Base near Fairbanks.

28600. CONSTRUCTOR. Alaska's construction boom attracts many contractors. (Constructor, Dec. 1950. v. 32, p. 27-29, illus.)

Notes housing, highway, railroad, airport, public works construction planned or in progress, for civilian and military agencies.

Copy seen: DLC.

28601. CONSTRUCTOR. Bath house in trailer in caravan to Alaska. (Constructor, Aug. 1950. v. 32, p. 35, illus.)

Describes auto caravan of 19 Fords which made trip from Des Moines, Ia., to Anchorage, Alaska, in 15 days in 1950. Kitchen, bathhouse and machine-shop trailers, also other special vehicles are described. They were used by crews for construction of International Express Airport at Anchorage.

Copy seen: DLC.

28602. CONSTRUCTOR. Engineers survey Alaska's resources. (Constructor, May 1949. v. 31, p. 68)

Outlines plans for a comprehensive survey of Alaska recently initiated by the Corps of Engineers, U. S. Army. Under supervision of Col. Theron D. Weaver, it is to cover the entire Territory and plan for development to meet needs for power, flood control, navigation and other water uses.

Copy seen: DLC.

28603. CONSTRUCTOR. Temporary arctic shelter designed by engineers. (Constructor, Aug. 1947. v. 29, p. 53, illus.)

Describes shelter with floors, walls, and roof of insulated metal panels now in the design stage by the U. S. Army Engineers. It is of light-weight material, simple construction, strong enough to withstand 125-mile-an-hour winds, and adjustable in size.

Copy seen: DLC.

28604. COOCH, GRAHAM. A preliminary study of the blue and lesser snow goose on Southampton Island. (Arctic circular, Feb. 1953. v. 6, no. 2, p. 14-17) 4 refs.

Contains results of observations made May 18-Aug. 5, 1952 at the mouth of Boas River, Southampton Island. Flock counts and nesting observations deter-

mined that the ratio of snow to blue geese was 4:1. Cross-mating, relation of spring break-up to breeding success, number of eggs per nest, incubation data, growth rate of goslings, and migration routes are briefly discussed. Five thousand geese were banded.

Copy seen: CaMAI; DLC.

28605. COOCH, GRAHAM. Techniques for mass capture of flightless blue and lesser snow geese. (Journal of wildlife management, Oct. 1953. v. 17, no. 4, p. 460-65, 7 illus., & diagrs.)

Contains a description of mass corraling of these geese as carried out by the author in summer 1952, at the mouth of the Boas River, Southampton Island, for the purpose of banding. Some 15,000 birds were brought into control quickly, by a simple method similar to that of the Eskimos' goose drive. The latter is also described. Knowledge of the driving technique among natives on Southampton Island is now limited to one family.

COOK, WILLIAM HARRISON, 1903-, see Lusena, C. V., and W. H. Cook. Ice propagation in systems of biological interest. 1. Effect of membranes . . . cell system. 1953. No. 30560.

28608. COOKMAN, AUBREY O., Jr. Ice-cube airport. (Popular mechanics, Sept. 1952. v. 97, p. 134-38, 260, illus., map)

Describes the three known massive ice islands, of great potential scientific and military importance, drifting at variable rates in the Arctic Ocean. They are apparently of fresh-water glacier origin, possibly coming from the north coast of Ellesmere Island. One of the islands is 20 miles wide and equally long; the ice is 200 or more ft. thick; and the sides of the islands rise 30 to 50 ft. above the surrounding ice pack. The first ice island was discovered in 1946, and the other two in 1950. The first landing on one was made in 1952. Studies of ice floes and ice islands as possible air bases by Russians and Americans are also noted.

28610. COOPER, JOHN COBB, 1887- . Airspace rights over the Arctic. (Air affairs, 1950. v. 3, no. 3, p. 517-40) 58 refs.

Survey prepared for *Encyclopedia Arctica* of problem of the "third dimension" of national territory in the Arctic. Its significance in view of the advance of long-range arctic flights is stressed, as is its development in connection with the problem of legal status of arctic regions. Views of Canada, U. S. S. R., Norway, and U. S. surface and airspace sovereignty in the Arctic are presented and documented, particularly in relation to the so-called "sector principle." The conclusion is reached that this principle, by which arctic border states claim exclusive rights to the arctic sea north of their limits and to its airspace, is not a part of international law and cannot affect the freedom of all nations to navigate in airspace above the Arctic Ocean.

Copy seen: DLC.

28611. COOPER, JOHN MONTGOMERY, 1881- . The culture of the northeastern Indian hunters: a reconstructive interpretation. (In: Johnson, F., ed. Man in northeastern North America, 1946, p. 272-305)

Contains an attempt to reconstruct the early migrational and cultural history of the northeastern North American hunting peoples, exclusive of the Eskimo, based chiefly upon the ethnological evidence. Author deals with migration of the Montagnais-Naskapi, Cree, and other Algonkin and Athapaskan tribes. The ecological approach (food and clothing, hunting economy, use of snowshoes and spruce-bark canoes), the distributional approach (northeastern and North American taiga phenomena, the Eurasiatic and other cultural phenomena) are considered. The author proposes term "taiga economy" for the ecologically-conditioned subsistence system common to the northeastern hunters, which had its origin probably in the Eurasiatic taiga two to four thousand or more years ago, and spread to the limits of the Eurasian and North American taiga. He concludes that "the hypothesis of more recent arrival of the Athabaskans from Asia, as compared with the Algonquians, must await settlement of more fundamental problems by the linguists; the more ancient genetic interrelations

of Algonquian (-Athabaskan) and Eskimo cultures will have to be determined, if ever, by the archeologists."

28612. COOPER, JOHN MONTGOMERY, 1881- . Northern Algonkian serying and scapulimancy. (*In: Festschrift, publication d'hommage offerte au P. W. Schmidt.* Wien, 1928, p. 205-217, sketch map)

Contains description of two kinds of divination having a wide dissemination. Serying is a divination by gazing into basin filled with water, and scapulimancy is divining from marks or cracks that appear on shoulder blades or other flat bones when held against a fire. Both kinds of divination were found among the Cree and Montagnais Indians living in a large area around James Bay extending eastward to Lake St. John and west to the sources of the Albany River (see map on p. 207). The author visited these Algonkian bands in 1916 and 1927, and this paper is based on his field notes with numerous references to the literature. Scapulimancy, he notes, is known also in northern Asia, especially among Chukchis. **Copy seen:** DLC.

28613. COOPER, S. C. Difficulties overcome in building far-north railway line. (Roads and engineering construction, Feb. 1952. v. 91, p. 101-107, illus., incl. map)

Describes the building of a 145-mile railway line by the Canadian National Railways from Sherridon to the Lynn Lake mining field in northern Manitoba.

Copy seen: DLC.

28614. COOVER, MULLEN O., and others. Effect of cold, adrenocorticotrophic and thyroid hormones on urinary excretion of pentose in the rat. (Society for Experimental Biology and Medicine. Proceedings, 1950. v. 74, no. 1, p. 146-47, table) 6 refs. *Other authors:* O. Mullen, L. J. Feinberg, and J. H. Roe.

Contains a report on experiments with rats kept at low (-1°C.) temperature and at such of 31°C. Low temperature increased significantly the urinary excretion of pentose; administration of ACTH abolished this increase. Administration of thyroid powder with the diet of rats kept in warm environment

also increased urinary excretion of pentose.

28615. COPENHAGEN. NATIONAL-MUSEET. ETNOGRAFISKE SAM-LING. Arctic peoples and American Indians. Copenhagen, 1941. 112 p., 33 illus., plan. (Guides to the National Museum)

Contains descriptive catalog and selected illustrations of the Museum's rich ethnographic collections with an introductory characterization of each people: the Lapps, Samoyeds, Ostyaks, Yakuts, Tungus, Gilyaks, Paleo-Siberians, and a particularly large section (rooms 7-22) on various branches of Eskimos. Room 18 contains a comparative arctic collection. The cultures of Northwest Indians (Tlingit, Haida, Tsimshian), and northern woodland Indians (Chipewyan, Cree, Algonkin and Naskapi) are also represented.

28616. COPP, STANLEY S. Two water systems in northern Canada. (U. S. Public Health Service. Public health reports, May 1953. v. 68, no. 5, p. 538-39) *Also pub. in:* Water works engineering, Feb. 1954. v. 107, no. 2, p. 130, under title: Successful operation of water works in the frozen North . . .

Contains note on two successful all-weather underground water supply systems installed at Yellowknife (Great Slave Lake) and at Fort Smith, 175 miles to the south. At Yellowknife, water is heated from Nov. through May. Heating equipment, pipes, and insulation are briefly described for each location, and temperatures of the water on entering and leaving the pipes are given. This is summary of a report presented before the Third Alaskan Science Conference, Sept. 1952.

28617. CORBEL, JEAN. Karsts et glaciers en Laponie. (Revue de géographie jointe au Bulletin de la Société de Géographie de Lyon et de la Région Lyonnaise, 1952. v. 27, no. 3, p. 257-68, illus., sketch map) 10 refs. *Title tr.:* Karsts and glaciers in Lapland.

Contains a study of erosion of three limestone areas in glaciated and periglacial regions: (1) Abisko in northern Sweden ($68^{\circ}20'\text{N. } 19^{\circ}\text{E.}$); (2) Sulitjelma ($67^{\circ}10'\text{N. } 16^{\circ}15'\text{E.}$); and (3) Svartisen ($66^{\circ}30'\text{N. } 14^{\circ}\text{E.}$) in northern Norway. In the first, a cold dry region, frost shattering of the limestone is important.

In the latter two regions, with cold humid climates, erosion is due to water proceeding from or circulating under the glaciers. *Copy seen:* DGS.

28618. CORBEL, JEAN. Problèmes de morphologie périglacière au Spitzberg. (Revue de géographie jointe au Bulletin de la Société de Géographie de Lyon et de la Région Lyonnaise, 1953. v. 28, no. 3, p. 262-68, 3 plates, 8 diagrs.) *Title tr.:* Problems of periglacial morphology in Spitsbergen.

Contains a discussion of the appearance of the landscape and explanations suggested for some of the periglacial forms seen. A general description of climate and landscape in east and west Spitsbergen is followed by a brief discussion of frost and snow as agents of erosion and their different effect on granite and limestone regions. Underground circulation in limestone regions under periglacial conditions is described. Down to 20 m. below the surface, some water may be found in the fissures; below 20 m. small underground glaciers comparable to surface ones occupy some of the fissures made by underground waters in a warmer era. Various relief forms, including limestone coasts, marine terraces, periglacial valleys, and patterned ground, are discussed with various explanations for their origin. *Copy seen:* DLC.

28619. CORBEL, JEAN. Une région karstique de haute-Laponie, Navnløsfjell: la montagne-qui-a-perdu-son-nom. (Revue de géographie jointe au Bulletin de la Société de Géographie de Lyon et de la Région Lyonnaise, 1953. v. 28, no. 4, p. 329-44, illus., 8 plates, 4 text maps) 2 refs. *Title tr.:* A karst region of northern Lapland, Navnløsfjell: the mountain-which-lost-its-name.

Contains description of a limestone plateau in the Svartisen region of northern Norway (approx. 66°30' N., 14° E.), part of a larger karst region. The area is treeless and underlain by permafrost, and until recently was covered by the Svartisen Glacier. The effects of the glaciation and periglacial conditions upon limestone, granite, and schist of the region are compared, and the development of the karst topography is outlined. Difficulties of obtaining continuous water supply are briefly noted.

28624. CORT, J. H., and R. A. McCANCE. The neural control of shivering in the pig. (Journal of physiology, Apr. 1953. v. 120, no. 1-2, p. 115-21, illus.) 8 refs.

Lightly anesthetized piglets made to shiver at normal or sub-normal temperature by introduction of cold air into the trachea, were studied. The first inspiration of cold air produced a brief shiver interrupted by the expiratory rest. In time shivering increased in amplitude and lost its respiratory rhythm. Admission of warm air into the trachea did not abolish shivering which lasted until body temperature increased. Bilateral cutting of the vagus obliterated the rhythmic response. Conditions in deep anesthesia are briefly noted.

28627. COSBY, STANLEY WALLACE, 1890- . Capability and need of Alaska

agricultural land. (In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 80-85)

Contains a discussion of land classification surveys, initiated in 1948 (by the Alaska Soil Conservation Board), which to 1951 had covered 800,000 acres on the Kenai Peninsula, Anchorage — Matanuska area, and Fairbanks region. Soil problems include thin surface soil layer low humus content, subsurface ice or permafrost in some areas, and rapid wind and water erosion due to high silt and fine sand content of most Alaskan soils. Setting up a land capability classification for the Kenai Peninsula is briefly described and the ten classes of land outlined. Future development is discussed.

Four major vegetational areas of Canada and Alaska are noted. The considerable ability of the prairie and tundra to support game as compared with the limited taiga is discussed and explained. Population changes are further analyzed as caused by changes in vegetation, by forest fires or felling. Qualitative changes, including changes in the nutritive value of the plants and their effects on the animal population in general and on some common, economically valuable animals are also analyzed and the conclusions referred to wildlife management.

Contains an account of facts strongly suggesting an epidemic of rabies among the population of foxes (*Vulpes fulva*) in the Northwest Territories during the winter 1944-45. Observations are also quoted, indicating a close association with this epidemic, of rabies observed in the same area among wolves and dogs. The significance of this epidemic in the decline of the fox population, and the possible role of epidemics in animal number fluctuations, are discussed.

Contains text of the Croonian Lectures, delivered in July 1945, and dealing with the way medical research has aided the Royal Navy in its function in every type of climate. Three aspects are discussed in consecutive sections: (1) naval construction, including air conditioning, heating, (2) clothing; and (3) efficiency. The problem of arctic clothing research and its practical application is dealt with (p. 172-73), with special reference to work done in the U. S. The psychological effects of long service in the Arctic and scientific leads to selection of personnel likely to acclimatize in the Arctic (p. 209-210) are also discussed. Abstracted by F. P. Ellis in *Bulletin of war medicine*, Jan. 1946. v. 6, no. 5, p. 255-56.

28641. CRONKWRIGHT, A. B. Water supply problems of the Arctic. (Public works, Aug. 1947. v. 78, p. 18-20, illus.)

"The difficulties of procuring water in arctic regions at temperatures of -40° F. and below are discussed. Hauling water from rivers or lakes is often difficult. The operation of snow-melting machines

is expensive and is advisable only where the supply of fuel oil is abundant. The possibilities of drilling for underground sources of water below permafrost should be investigated; high speed rock drills may be suitable. The distribution of water by pipe line for short distances is feasible. One such installation in a sub-arctic army camp is described. The 2,500 ft. long distribution main was encased in a Kimsul-packed box to keep it from freezing, and a smaller steam line was placed in the box alongside of the main as an added protection."—SIPRE.

28645. CURRAN, CHARLES HOWARD. 1894—. New species of Canadian Syrphidae (Diptera) pt. 1. (Canadian entomologist, 1922, v. 53, no. 12, p. 275-76)

Contains descriptions of three new species of Canadian syrphid flies of the genus *Melanostoma*. *M. lata* n. sp. collected at Whitehorse, Yukon Territory, by A. P. Hawes, July-Aug. 1920, is included.

Copy seen: MH-Z.

28646. CURTIS, EDWARD S., 1868- The Alaskan Eskimo. Cambridge, Mass., The University Press, 1930. xvii, 320 p., text illus., 76 plates, col. front., col. map. (In: The North American Indian, v. 20; and its portfolio 20, plates no. 688-722, 60 x 50 cm.)

Contains brief introductory sketch and texts (in English) of myths of the following West Alaskan Eskimo groups: Nunivak (p. 5-96, 20 myths); Eskimo of Hooper Bay (p. 97-98); King Island (p. 99-110, 7 myths); Little Diomed Island (p. 111-34, 8 myths); Cape Prince of Wales (p. 135-60, 8 myths); Kotzebue (p. 161-92, 9 myths); Noatak (p. 193-206, 9 myths); Kobuk (p. 207-224, 7 myths); and Selawik (p. 225-40, 6 myths). The author spent the summer of 1927 among Eskimos of the West Alaskan coast and islands. His field research was supported by J. Pierpont Morgan. The sketch of the Nunivak Islanders (p. 5-74) deals extensively with their social customs, warfare and ceremonies; the social customs on Little Diomed (p. 119-24), and the life of Kotzebue Eskimos (p. 161-77) is also described in some detail; the general introductions on other groups are short. Appendix (p. 343-77) contains a general summary of the material and spiritual culture, 24 additional legends (p. 245-63), and a vocabulary of Nunivak, Little Diomed and Kotzebue dialects (p. 264-77). A subject index is appended. Data (social status, etc.) on the narrators of the myths and legends, are lacking, and the place they were recorded seldom given. Photographic illus. in vol. and portfolio are excellent in depicting the anthropological types and material culture.

Copy seen: DLC.

28647. CURTIS, EDWARD S., 1868- The Haida. (In: The North American Indian. Cambridge, Mass., 1907-30. v. 11, pub. 1916, p. 115-210, plates, music notes; and its portfolio 11, plates no. 397-400, 60 x 50 cm.)

Contains general description of the Haida Indians on the Queen Charlotte Islands in British Columbia, and the south end of Prince of Wales Island, Alaska, their culture, mythology and legends. A list of Haida villages (p. 188-91), melodies of dancing songs (p. 123-24, 191-93), and a vocabulary (p. 204-210) are given.

Copy seen: DLC.

28648. CZAPLICKA, MARIE ANTOINETTE, d. 1921. The influence of environment upon the religious ideas and practices of the aborigines of northern Asia. (Folk-Lore, 1914. v. 25, p. 34-54)

Contains a physical characterization of the area: (1) the northern tundra and taiga with truly arctic climate, and (2) the southern or "sub-arctic" area with steppes, fertile valleys, and mountains. The natives are grouped as: Paleo-Siberians (Chukchis, Koryaks, Kamchadals, Ainu, Gilyaks, Asiatic Eskimos, Aleuts, Yukaghirs, and Yenisei-Ostyaks or Yeniseians), and Neo-Siberians (Ostyaks and Voguls, Samoyeds, Yakuts, Tungus, Buryats and other smaller Turco-Tataric and Mongolian tribes). A cultural scale is indicated with Reindeer Lapps highest, then the Greenland Eskimos, Chukchis, etc., and the Samoyeds lowest. Ceremonials, shamanism, animistic and pre-animistic ideas, mythology and belief in gods are described among the two major groups. Shamanism is differentiated by the influence of environment into "northern" and "southern" types. Among the Paleo-Siberians, family shamanism is more important and the shamanistic apparatus poor due to the lack of light and suitable materials: e. g. the shamanistic coat and cap so significant among the Neo-Siberians are unnecessary in the dark and confined quarters of the Paleo-Siberians' underground houses. Among the latter pre-animism is dominant, with no differentiation between natural and supernatural, animate and inanimate objects. Neo-Siberian mythology is less animistic, with either a strictly dualistic division into good and bad spirits, or the good spirits predominant, and among some tribes, e. g. the Yakuts, a monotheistic tendency. The Neo-Siberians, amid varied scenery of open country and mountains, came to

worship the sky and heavenly bodies. Religious practices are observed to change when the people move into another region of different environment, e. g., the kumiss festival loses importance among the Yakuts as they move from the land of the horse to that of the reindeer. This paper is based on literature, extensively cited in footnotes.

28649. CZERNY, ABT LEANDER. Monographie der Helomyziden (Dipteren). Wien, Verlag d. Zool.-bot. Gesellsch., 1924. 166 p plate 1. (Zoologisch-botanische Gesellschaft, Vienna. Abhandlungen, Bd. 15, Heft 1) **Title tr.:** A monograph of the Helomyzidae (Diptera).

Contains a monographic treatment of dipterous fam. Helomyzidae, with tables for the determination of subfamilies, genera and species and descriptions of about 180 species (23 described as new). Includes at least 15 species native to Lapland, three from northern regions of America (Alaska, Northwest Territories) and two from northern Siberia and Novaya Zemlya. For additions and corrections see the author's *Ergänzungen und Berichtigungen*, 1928, *Arctic Bibliography*, No. 21330. **Copy seen:** MH-Z.

28650. DADYKIN, VSEVOLOD P. Igarka. (Geograficheskoe shkole, 1938, no. 3, p. 15-21, illus.)

Igarka (67°30' N. 86°35' E.) is situated on the right bank of the Yenisey River, and never flooded. Its harbor is used by large vessels during the short navigation season. The town had 12,000 inhabitants in 1935 and continues to grow, has ten schools, 30 shops, theater, clubs, and a radio station. Permafrost begins 30-50 cm. below the surface of the ground, is 35-40 m. deep, and has a temperature of -1° C. rarely -3° C. Kolkhoz imeni Kirova at the Staraya (old) Igarka settlement is on the left bank of the river. It has 500 workers, 200 head of reindeer, a few horses and cows; carries on fishing and, in winter, hunting of fur-bearers.

28651. DADYKIN, VSEVOLOD P. O biologicheskikh osobennostyakh rastenii kholodnykh poelch. (Priroda, 1950. no. 5, p. 21-29, illus.) **Title tr.:** On the biological peculiarities of the plants of cold soils.

"Three types of plants growing in permafrost regions are differentiated ac-

according to soil penetration of the root systems. Field experiments in permafrost were made (in 1947 and 1948) at 67°27' N. lat. with eleven wild-growing (trees, shrubs, herbs) and cultivated plants (oats, barley, potatoes). The active layer measured 2-3 m. The temperatures in the higher soil horizons were -0.5° to -0.8° C., seldom lower than -1.5° C. Roots of cloudberry, sedge and horsetail were found to penetrate into the frozen ground to a depth of 90 cm. and remain viable. These tests tend to indicate that various plants in permafrost regions utilized different ways of adaptation to low soil temperatures. The result of root penetration of oats and potatoes in frozen ground and harvest yields are tabulated. Tests showed that the value of transpiration decreased under low temperatures and the osmosis increased. Results of similar laboratory studies are given."—SIPRE.

Results of a study carried out in the summer (July-Aug.) 1948 in an unidentified arctic region, on the birch (*Betula pubescens*) and potato, are tabulated. The photosynthesis in the birch was continuous (lower at night) and stomata were half-opened all the time; the assimilation activity of the potato stopped in the night time and stomata were closed.

28653. DADYKIN, VSEVOLOD P. O vodnom rezhime i pitanii rastenii na kholodnykh pochvakh. (Akademiia nauk SSSR. Doklady, 1950. nov. ser., t. 70, no. 6, p. 1073-76) **Title tr.:** On the water regime and nutrition of plants growing on cold soils.

Contains summary of results of experimental study of transpiration and nutrition: the transpiration of the plants under changing soil temperature is indicated (table 1); the influence of low temperature of the nutritive solution on the growth of barley and oat sprouts is also shown (table 2-5). It is concluded that low temperature causes poor assimilation of nitrogen by plants and the retardation of their growth.

Basic work on the relationship of permafrost to agriculture in arctic regions. The biological importance of permanently frozen ground and the history of the agrobiological study of permafrost are outlined. Agriculture is claimed to have expanded northward during the Soviet regime from 63°-65° N. to 69° N. in European U.S.S.R. and to 71° N. lat. in Siberia. Salient factors of plant development in cold soils are discussed, such as loss of sun heat for melting of the ground ice, excessive humidity in the section of soil overlaying permafrost, low nitrification of cold soils, etc. The root systems of wild-growing and cultivated plants (trees, shrubs, vegetables, grain crops, grasses, etc.) water regime of plants, peculiar features of root function and growth, and plant development are dealt with. The chief factor in the slow development of such plants is not the "physiological dryness" of such soils, but difficulties in the assimilation of nitrogen. This can be relieved by the spraying of plants with a nitrogen-containing solution.

28655. DADYKIN, VSEVOLOD P. Problemy osevereniia zemledeliia. (Priroda, 1953, no. 4, p. 38-46) **Title tr.:** The problem of the extension of agriculture northward.

Contains historical notes on the progress of northern agriculture during the Soviet regime; data on cultivation of various crops (oats, barley, rye, wheat), vegetables (cabbage, beets, carrots, etc.), and forage grasses, based mostly on experience of the Khibiny Agricultural Station on Kola Peninsula. Features of agriculture peculiar to northern regions, such as cold and short summer, abundance of light in summer, insufficient precipitation, long and cold winter, cold soil, need of large amounts of organic and mineral fertilizers, etc., are discussed.

28657. DAHL, EILIF, 1916- . On the relation between summer temperature and the distribution of alpine vascular plants in the lowlands of Fennoscandia. (*Oikos*, 1951. v. 3, fasc. 1, p. 22-53, text maps)

Contains a study on the relation between high summer temperatures and the absence of many of these plants from the lowlands, based on data of 1932-46. Maximum summer temperatures in Fennoscandia and Denmark, the relation of plant distribution and peak summer temperatures, physiologic basis for this relation, summer temperature and the history of the alpine flora in Fennoscandia, are discussed. It is concluded that many alpine forms are prevented from spreading into the plains by the high summer temperature of the latter, a fact also confirmed by observations in botanical gardens and greenhouses. The study includes the arctic region of this general area.

Contains a study of the physical anthropology and ethnic origins of Selkups or Ostyak-Samoyeds, living on the Taz and Turukhan Rivers (about 1,500), and on the Tym River (about 4,500, some 2,000 of whom now speak only Russian). Inter-marriage between Selkups and Tungus, Yeniseians, or Russians is quite common. Sent by the Anthropological Institute of Moscow State University to the Selkups of Tym, the author in 1939, measured 71 adult males of "pure" race (without genealogically known Russian admixture), and in 1941 he did the same with 84 "pure" male Selkups of Taz, and with another eight persons from the Turukhan River. Among the cross-breeds investigated were 28 of Selkups x Ostyak, and 47 of Selkups x Tungus origin. Measurements and indexes are presented in tabular form and compared frequently with those of neighbors.

Three anthropological types of Selkups are characterized: moderate Mongoloid, more Mongoloid, and a type showing Europoid traits (p. 115-16). The author also gives anthropological characteristics of the neighboring peoples, based on old and new surveys, and on his own investigations among them. Thus characterized are Yeniseians, Ostyaks, Tungus, Yurak-Samoyeds (Nenetsy), Yenisey-Samoyeds (Enetsy), Tawgi-Samoyeds (Nganasani), and Chulymtsy, a Turcic tribe. Anthropological types of Selkups are compared with the neighboring ethnic groups; questions of the fair (European), the Americanoid, and Mongoloid components in the anthropological type of Selkups are discussed. Ethnological parallels or cultural layers and rather bold ethn-

graphic conclusions are given at the end of this well-documented study. The Selkups, according to the author, originated from the mixture of at least three racial components. The original, fair East European component, which cannot be attributed to recent Russian influence, was mixed very early, when the Selkup ancestors settled in northwestern Siberia, with some dark Asiatic component, tentatively called "Americanoid." Next came the Mongoloid component from the South, from the Sayan Mts. region. Finally, after the Selkups migrated further to the North, they and especially those on the Taz received further Americanoid elements from Yeniseians, and more Mongoloid elements from Tungus. Map (55°-73° N. 75°-90° E.) on p. 105 shows the locations of peoples mentioned above.

28682. DEBETS, GEORGI FRANTS-EVICH. Sredneobskaa ekspeditsiia 1939 g. (Moskva. Universitet. Nauchno-issledovatel'skii institut i muzei antropologii. Kratkie soobshcheniia o nauchnykh rabotakh, 1938-39, pub. 1941. p. 26-27, table 8) **Title tr.:** Expedition to the middle Ob' in 1939.

Contains a short report on field work done by the writer and one student in July-Sept. 1939. The Selkups (Ostyak Samoyeds) in the region of Tym (district of Naryn) and the Ostyaks of the Vakh River were investigated. Both groups have traits of a mixed Mongoloid-Europoid type; the Ostyaks show relationship to the Yeniseians. Measurements are summarized on table 8. Blood groups were also investigated.

28684. De CONINCK, LUCIEN A. P. On the resistance of the free-living nematode *Anguillula silusiae* to low temperatures. (Biodynamica, Dec. 1951. v. 7, no. 135, p. 77-84, 4 tables)

Contains an account of experiments with worms frozen to -30° C. and -192° C. or successively to both. With exposure to -30° C. the percentage of survivors ranged from 50 percent after five minutes to 0.06 percent after 15 days of exposure. After exposure to -192° C. survival amounted to a fraction of one percent and was not affected by the duration of exposure (15 seconds to 15½ hours). With successive exposures survival was raised to 5 percent. The juvenile stages III and IV offered the highest resistance to cold.

Contains a brief account of microscopic observations in the living eye chilled to about 0°C. for 10-16 hours. Immediate and late, both temporary and permanent changes of the lens are discussed. Guinea pigs were used in the experiments.

Copy seen: DSG.

28686. de DOBBELER. Eine Reise nach dem Tasz-Busen. (Globus, 1886. Bd. 49, p. 119-21, 136-39) **Title tr.:** A trip to Taz Bay.

Contains account of a trip from Samaroovo down the Ob' to Tazovskaya Guba in July 1884, landing at Nakhodka near the mouth of the Taz River. Navigation and weather conditions, terrain, vegetation and birds of the region are described. Author stayed till December at a small Samoyedic fishing and trading point near the mouth of the Pur River, making excursions on the Taz and Pur. Weather observations were made, material collected for a Samoyedic dictionary and the material culture, customs and religion studied. In December he traveled from Pur to Surgut with a Samoyed reindeer caravan, finding en route two Samoyed sacrificial or holy places. From Surgut he drove by horse-sledge to Tobol'sk and Tyumen. Travel conditions are described in detail throughout.

28687. de DOBBELER. Die Samojeden. (Globus, 1886. Bd. 49, p. 167-69, 182-84, 199-202, 215-17) *Title tr.:* The Samoyeds.

Contains an extensive description of Samoyed life as it was observed by the author while visiting them in 1884, in the region of Tazovskaya Guba, on the lower Taz and Pur Rivers. Many details are given on clothing and ornaments, dwellings, four types of sledges and the harnessing and driving of reindeer with them, boats, objects made of bone, wood and leather. The Samoyed means of livelihood are described: reindeer herding, hunting equipment (bow and old flint gun, traps) and kinds of animals and birds hunted, fishing and the making of nets, seasonal wanderings, use of dogs, etc. Notes are given on care for children, beliefs and religion (idols, sacrifices, shamanism), burial customs, tabus for womenfolk. Several Samoyedic words and phrases are quoted, personal names given, property marks mentioned. The role of an elected *starshina* who dispenses justice in minor cases is stressed, respect for property, and kinds of entertainment noted. The author finds that physically the Samoyeds are less Mongolic than the Ostyaks, but that they have taken over many customs and beliefs from Ostyaks with whom they have much contact. Rich Samoyeds go to Obdorsk and Surgut to trade, some even go to Petersburg to see the Tsar. *Copy seen:* DLC.

28688. DEDOV, ANDREĬ ALEK-SANDROVICH, 1902- . Olen'i pastbishcha. (In: Olen'i pastbishcha Sev-go Kraia, 1931. p. 56-135, sketch map) *Title tr.:* Reindeer pastures.

Contains a geobotanical study carried out in 1928, of the tundras of the Timan region as reindeer pastures, with data on the geology and physical geography of the region, two tables of mean monthly temperatures for the years 1924-27, a general description of tundra and its subdivision into seven types, plant associations (lists of plants) peculiar for each type and a summary table of vegetative cover of sample areas with statistical data (p. 129-33). *Copy seen:* Microfilm in CaMAI and DLC, from Dr. Eric Hultén's copy.

Contains notes on time (fall, winter, early spring) and on methods for disposal of tree branches and other remains from timber cutting in the taiga regions of the U.S.S.R., based on experience in Leningrad province and in the Urals.

Copy seen: DLC.

28692. de LAGUNA, FEDERICA, 1906- . An Alaskan stone lamp. (Pennsylvania. University. University Museum. Bulletin, Dec. 1932. v. 4. no. 1, p. 21, 23-25, incl. plates)

Contains description of a small Eskimo lamp with a human figure in the bowl, excavated by the author in 1932 at Kachemak Bay, Cook Inlet, Alaska, and now at the Museum. Its origin is discussed, and comparison made with five other lamps of the same type. The latter were described by Dr. J. A. Mason 1928, q. v. *Copy seen:* DLC.

28693. de LAGUNA, FEDERICA, 1906- . Ceremonial paddles from the Eyak Indians, Alaska. (Pennsylvania. University. University Museum. Bulletin, Mar. 1934. v. 5, no. 2, p. 57-59, plate X)

Contains description of two ornamented dancing "paddles" or ceremonial wands of the Eyak Indians from the Copper River delta, Alaska. The Eyaks (diminished to less than 30 persons) are an Athapaskan-speaking people, strongly influenced by Eskimos and Tlingits. The "paddles" were used in potlatches in remembrance of the dead.

Copy seen: DLC.

28694. de LAGUNA, FEDERICA, 1906- . Eskimo and Tena lamps and cooking pots. (*In:* Congrès International des Sciences Anthropologiques et Ethnologiques. 2d, Copenhagen, 1938. Compte rendu, 1939. p. 298-99)

Contains some conclusions on the origin of the cooking pots in southwestern Alaska (Norton Sound-Bristol Bay area): a survival of the Old Bering Sea culture tradition, transformed in shape and decoration by influences from Ainu-Kamchadal pottery, themselves originally derived from neolithic Mongolian ware; southwest Alaska previously had neither stone nor pottery cooking vessels.

28695. de LAGUNA, FEDERICA, 1906- . Eskimo dug-outs. (Pennsylvania. University. University Museum. Bulletin, Mar. 1935. v. 5, no. 4, p. 49-53, plate VII)

Contains description of three Eskimo dugouts (only specimens known to date), found in a burial cave at Prince William Sound, Alaska, in 1933 by the author and Kaj Birket-Smith. The Eskimos learned from the Eyak Indians to shape the canoes with small stone adzes. Description of mummified bodies and other objects found in the cave, and two legends are given. *Copy seen:* DLC.

28696. de LAGUNA, FEDERICA, 1906- . Expedition to the Yukon. (Pennsylvania. University. University Museum. Bulletin, Dec. 1935. v. 6, no. 2, p. 50-57, illus.)

Contains account of an archeological expedition to the middle and lower Yukon Valley in 1935, organized by the Pennsylvania University Museum and carried out by the author and three men. Prehistoric Indian sites were sought.

Results of the expedition have been published in the author's work *The prehistory of northern North America*, 1947 (Arctic Bibliography, No. 3835).

Copy seen: DLC.

28697. de LAGUNA, FEDERICA, 1906- . The importance of the Eskimo in northeastern archaeology. (*In:* Johnson, F., ed. *Man in northeastern North America*, 1946. p. 106-142, 13 fig., sketch map)

Contains a thorough-going discussion of archeological objects representing culture traits borrowed by the Indians from the Eskimos, or vice versa. The most relevant specimens (of Dorset and Thule cultures): harpoon heads, fish hooks, the *ulo* or semi-lunar knife of ground slate, double-edged slate blades, chipped stone artifacts, etc., are figured, described, and their modifications discussed; the relative paucity of Eskimo borrowings is noted. From the survey, author stresses the hybrid origin of the northeastern group of Indian cultures, some of its most distinctive features stemming from an Eskimo source; also the diversification of Eskimo culture itself. *Map* (p. 108) presents suggested chronology of northern cultures.

28698. de LAGUNA, FEDERICA, 1906- . Peintures rupestres Eskimo. (Société des Américanistes de Paris. Journal, 1933. nouv. sér. t. 25, p. 17-30, 10 illus., plate, text map) *Title tr.:* The rupestral drawings of Eskimos.

Contains description and investigation of rock paintings (figures of men, animals, whales, boats, etc.), discovered at four places on Cook Inlet, southwestern Alaska. Similar paintings have been found also on Kodiak Island. They are obviously Eskimo work, though Indian (Athapaskan) and Asiatic influences are possible. The paintings were probably done by members of the secret societies of whale hunters. *Copy seen:* DLC.

28699. de LAGUNA, FEDERICA, 1906- . A preliminary sketch of the Eyak Indians, Copper River delta, Alaska. (*In:* Philadelphia Anthropological Society. Publications, 1937. v. 1, *Twenty-fifth anniversary studies*, ed. by D. S. Davidson, p. 63-75)

The Eyak, an Athapaskan-speaking people who have pushed down the Copper River to its mouth, were influenced partly by Tlingits and partly by Eskimos.

There are two villages numbering some 150 to 200 individuals. Brief description is given of their houses, burial places, canoes, snowshoes, clothing and ornaments, tattooing, technique of hunting and fishing, their social organization, myths and tales, family, religious beliefs, puberty rites, funeral customs, potlatch and other feasts, dances, beliefs in witches, shamans, various other beliefs and taboos. Based on information from W. R. Abercrombie who visited the Eyak in 1884, and on author's visit in 1930 and (with K. Birket-Smith) in 1933. For the final report on her study, see *Arctic Bibliography*, No. 1641. **Copy seen:** DLC.

de LAGUNA, FEDERICA, 1906- . Preservation of archaeological and ethnological material in Alaska; with comment by D. Jenness. See Alaskan Science Conference, Nov. 1950. Proceedings, 1951. No. 20117.

28700. de LAGUNA, FEDERICA, 1906- . Some problems in the relationship between Tlingit archaeology and ethnology. (In: *Asia and North America, trans-Pacific contacts*, pub. as: Society for American archaeology. Memoirs, no. 9; supplement to American antiquity, Jan. 1953, v. 18, no. 3, pt. 2, p. 53-57, map)

Contains archeological and ethnological data on northern Tlingit tribes in Southeast Alaska, gathered by the author in 1949 and 1950. A number of archeological sites were explored in the Yakutat and Angoon areas. There are petroglyphs pecked into the rocks, or pictographs in red paint to commemorate important events and to be "read" like totem poles. Archeological specimens found near Yakutat are: small barbed heads for harpoon arrows, oval stone lamps, barbed slate blades, awl-like slate weapon points, and copper arrowheads. Traditions and stories of the sites are noted particularly as indicators of population in the area, and possible causes of the latter are discussed. **Copy seen:** CaMAI.

28701. de LAGUNA, FEDERICA, 1906- . Three carvings from Cook Inlet, Alaska. (Pennsylvania. University. Museum. Bulletin, Feb. 1933. v. 4, no. 2, p. 56-58, plate XII)

Contains description of three ivory figurines, representing human heads, secured in 1932 from a prehistoric Eskimo site on Kachemak Bay (Cook

Inlet, Alaska), and now with the collections of the Museum.

Copy seen: DLC.

28702. DELANGLEZ, JEAN, 1896- . Life and voyages of Louis Jolliet, 1645-1700. Chicago, Institute of Jesuit History, 1948. vii, 289 p. 6 text maps. Approx. 300 refs. "A condensation of ten articles published between July 1944 and October 1946", chiefly in *Mid-America*.

Chapters 8-10 (p. 149-235) deal with Jolliet's voyages to Hudson Bay in 1679 and Labrador in 1694, also (briefly) with an earlier voyage to Labrador in 1689. An historical summary of voyages of discovery and exploration to Hudson Bay between 1647 and 1679, and to Labrador between 1586 and 1694 precede the account of Jolliet's voyages, abridged from his journals. Jolliet's maps and the route taken to Hudson Bay are discussed. An enlarged edition, translated into French by the author, was pub. as: *Louis Jolliet, vie et voyages (1645-1700)*. Montréal, Institut d'Histoire de l'Amérique française, 1950 (435 p., maps).

Copy seen: DLC (both editions).

28703. De LEONARDIS, SALVATORE Productivity of the rock and willow ptarmigan. (In: Alaskan Science Conference . . . 1951. Proceedings, pub 1953, p. 334-36) 4 refs.

Contains an account of observations made between April and July in three widely separated areas of interior Alaska. Includes information on pairing, nesting, brood size, size of young, etc.

Copy seen: CaMAI; DLC.

28704. DELEVSKIĬ, P. S. K klinike i lecheniū otmorozheniū. (Ortopediā i travmatologiā, 1941, no. 2, p. 41-45, 6 illus.) **Title tr.:** Clinical aspects and treatment of frostbite.

Contains an analysis of frostbite cases in an evacuation hospital, according to degree and location of the injury; time passed since its contraction; clinical course; x-ray findings of bone involvement; gangrene and its demarkation, etc.

"Plans of study for the glaciological phase of the exploration are presented. Headquarters will be established on the west coast of Greenland, where a variety of ice formations are easily accessible. Studies of glacial movement and ice deformation in the border zone of the inland ice, of growth and wastage of glaciers, and topographic and depth measurements of the interior regions of the island ice are proposed."—SIPRE.

Text, charts and tables give data as in previous years (*Arctic Bibliography*, No. 3874) for: waters around Novaya Zemlya and Spitsbergen; Greenland Sea, Iceland, and Denmark Strait; Davis Strait, Baffin Bay, Hudson Bay and Strait, Canadian Arctic Archipelago. **File seen:** DN-HO (1947-1950; separate issues, text in English); DWB.

28732. DENMARK. RIGSDAGEN. GRØNLANDSUDVALG. Betaenkning afgivet den 12. Juni 1946 af Rigsdagens Grønlandsudvalg i forening med en af de grønlandske Landsraad valgt delegation og repræsentanter for Grønlands Styrelse. (Grønlandsposten, 1946. Aarg. 5, nr. 6, p. 118-44) *Also pub.* as a booklet under the same title by J. H. Schultz A/S, København, 1946. **Title tr.:** Report issued June 12, 1946, by the Rigsdagen's Greenland Committee in conjunction with a delegation elected by the Greenland Territorial Council, and representatives of the Greenland Administration.

Contains report of the negotiations between the Greenlandic delegation, the Rigsdagen's (i. e. the Danish legislature) Greenland Committee and the Greenland Administration, on reorganization of the government, economy, education and welfare. The negotiations initiated in the summer of 1939, suspended during the war, were resumed under somewhat changed conditions in Copenhagen in Jan. 1946 and completed June 12th. Names of the delegates and members participating are given. The agenda covered problems of (1) administration and government; (2) trade and industry; (3) culture and education; (4) public health and welfare; and (5) establishment of a Greenland fund. The first included establishment of a central administration: one governor and council for the entire country; government trade monopoly and restrictive regulations; equality of Greenlanders with Danes, etc. The second dealt with fishery, sealing, hunting, agriculture, mining, and trade problems. The third concerned mainly various types of schools, the role of the Church, Greenlanders as students in Denmark; but also films, radio, and press. Under (4) such topics as need for doctors, the hospitals,

doctor boats, tuberculosis, housing, public information, etc., were discussed. A five-year budget for administration, industry, cultural activities, health and welfare is presented in detail in appendix.

28733. DENNY-BROWN, DEREK, 1901-, and others. The pathology of injury to nerve induced by cold. (*Journal of neuropathology and experimental neurology*, Oct. 1945. v. 4, no. 4, p. 305-323, illus., 2 tables) 18 refs. *Other authors:* R. D. Adams, C. Brenner, and M. M. Doherty.

Contains a study on the effects of experimental cooling or freezing of nerves in the cat. The myelin and axis cylinders of peripheral nerves were selectively damaged, the largest being most sensitive, the smallest the least. Damage to some kinds of fibers was caused by temperatures as high as +8° C. and 30 minutes exposure. Differences between degrees of lesion, the after-effects of cooling, and regeneration are also discussed.

Contains data on the zoological, oceanographic and hydrological investigations of Novaya Zemlya, carried out by the expeditions of the Northern Scientific-Industrial Institute and Hydrological Institute in 1923-24, with notes on the most interesting finds in the zoological field. **Copy seen:** MH-Z.

28740. DE SANTIS, D. Presupposti terapeutici sui congelamenti. (Accademia medica lombarda, Milan. Atti, 1942. Anno 31, n. 8, p. 231-33) **Title tr.:** Presupposed therapy in frostbite.

Contains a discussion and evaluation of the therapeutic methods applied in frostbite. Concluding that they are all of limited value, the author calls for a change in orientation. **Copy seen:** DSG.

28741. DESGREZ, A., and others. Action des climats sur les diverses fonctions de l'organisme sain et pathologique. (In: Piéry, M., ed. Traité de climatologie biologique et médicale. Paris, 1934. t. 1, p. 679-751) **Other authors:** H. Cardot and D. Santenoise. **Title tr.:** The action of climate on the divers functions of the healthy and pathologic organism.

Contains an extensive study on the effect of climate—including arctic climate and cold—on human and animal physiology. Following functions are dealt with: respiration; blood Hb; erythrocyte, leucocyte and platelet number; alkaline reserve; pH; density-viscosity, mineral elements of blood; circulation; heart-beat; blood pressure; thermoregulation; food intake; metabolism; nervous system; endocrines; psychic functions. Each subject section is followed by copious bibliography. **Copy seen:** DLC.

28742. DES MARAIS, ANDRÉ, and L.-P. DUGAL. Circulation périphérique et teneur des surrénales en adrénaline et en artérénol (noradrénaline) chez le rat blanc exposé au froid. (Canadian journal of medical sciences, June 1951. v. 29, no. 3, p. 90-99, illus. tables) 39 refs. **Title tr.:** Peripheral circulation

and the content of the adrenal in adrenalin and noradrenalin in the white rat exposed to cold.

During the period of reaction and adaptation to cold, peripheral circulation shows alternate phases of vasodilation and vasoconstriction, with a prevalence of the latter. Complete adaptation to cold is accompanied by establishment of a new rate of peripheral circulation with a light vasodilation. Circulatory changes during the period of adaptation to cold are not accompanied by parallel fluctuations in adrenalin or noradrenalin content of the adrenal medulla, but cold exposure seems to increase the adrenal content in both hormones. Summary in English.

(Canadian journal of medical sciences, June 1951. v. 29, no. 3, p. 104-107, illus. table) 18 refs. **Title tr.:** The influence of administration of adrenalin and noradrenalin on the hypertrophy of the adrenal due to cold.

Contains an account on experiments with male rats, which showed that injection of either of the substances had no effect on the hypertrophy of the adrenal cortex during exposure to cold. Injection of adrenalin lowered the content of this hormone in the medulla without affecting the noradrenalin level; an analogous situation developed upon injection of noradrenalin. Administration of adrenalin appears to enhance the survival of rats exposed to cold. Summary in English.

28744. DETERLING, RALPH ALDEN, Jr., 1917- The use of dioxyline phosphate in peripheral vascular disorders. (Angiology, Oct. 1953. v. 4, no. 5, p. 397-405, illus., table) 7 refs.

Dioxyline phosphate, a synthetic papaverine-like compound, was given to over 125 patients including 12 with Raynaud's phenomena. No significant side effects at the dosage given were observed though medication lasted in some cases 18 months. Some degree of benefit is claimed in over half of the cases, the greatest being in patients with phlebitis, arterial thrombosis or embolism, Raynaud's phenomena, and others.

28754. DIGBY, ADRIAN. An ivory arrow-straightener from Alaska. (British Museum. Quarterly, 1936. v. 11, no. 1, p. 13-15, plate)

Contains description and four illus. of a newly acquired specimen of considerable interest. The handle terminates in a bear's head, and beyond the hole at the other end are two smaller bears' heads. On all four surfaces, small figures have been scratched depicting either animals (seals and caribou), or scenes from Eskimo life. The animal figures are apparently a tally representing seals caught and caribou killed by the owner of the implement, and the scenes evidently represent particular incidents in his life. The object probably dates from the beginning of the 19th century.

Contains brief note on a quantitative study of marine phytoplankton and zooplankton carried out by the author and Mrs. Digby, Aug. 1950-Sept. 1951. Sampling was done by boat until early October, then through holes in the ice until June. **Copy seen:** CaMAI; DLC.

28756. DI GRAZIA, A. Adrenalina e iperglicemia nella morte da freddo. (Rassegna internazionale di clinica e terapia, Nov. 1933. anno 14, v. 14, no. 21, p. 1035-41) 23 refs. **Title tr.:**

Adrenalin and hyperglycemia in death from cold.

Contains an account of experiments on guinea pigs treated with adrenalin and submitted to rapid chilling. A much more pronounced hyperglycemia was found in such animals upon death, than in similarly cooled animals not treated with adrenalin. The role of adrenalin in cold hyperglycemia is discussed.

Copy seen: DSG.

28757. DI GRAZIA, A. Assideramento e acidosi; ricerche sperimentali. (Rassegna di fisiopatologia clinica e terapeutica, 1933. anno 5, n. 5, p. 248-66) 28 refs. **Title tr.:** Hypothermia and acidosis; experimental investigations.

Contains an account of experiments with guinea pigs treated parenterally with diluted hydrochloride acid and subsequently made hypothermic. Such animals died earlier than untreated controls; at death the temperature of their inner organs (liver, heart, etc.) is higher; the spleen is not changed; the gallbladder moderately reduced in volume.

Contains a study of the effect of cooling on the E. M. G. of intact muscle of the arm, submerged in a bath of 5° C. The main change observed was an equalization and enlargement of the E. M. G. waves, with the amplitude diminished and the duration augmented.

Copy seen: DLC.

28764. DISSELHOFF, H.-DIETRICH. Bemerkungen zu einigen Eskimo-Masken der Sammlung Jacobsen des Berliner Museums für Völkerkunde. (Baessler-Archiv, 1935. Bd. 18, Heft 3, p. 130-37, 20 illus.) 20 refs. **Title tr.:** Remarks on some Eskimo masks of the Jacobsen collection in the Museum of Ethnology in Berlin.

Contains a discussion of the Eskimo masks from South Alaska, the lower Yukon and Kuskokwim, brought home by Capt. Johan Adrian Jacobsen from his travels in 1881-83 (see *Arctic Bibliography*, No. 7956). Several types are represented in the collection: "shaman masks", usually representing the moon spirit in the shape of a friendly human face; masks of an angry mountain spirit; animal masks; and some of rather realistic human faces. Typical specimens are described and illustrated, their relationship with the Indian masks is discussed and references made to literature.

28765. DISSELHOFF, H.-DIETRICH. Bemerkungen zu Fingermasken der Beringmeer-Eskimo. (Baessler-Archiv, 1936. Bd. 19, Heft 3-4, p. 181-87, 6 illus.) 10 refs. **Title tr.:** Remarks on the finger masks of the Bering Sea Eskimos.

Contains description and ethnological explanation of certain mask-like finger ornaments, used in the dance and mostly by women among the Eskimos between the Yukon and Nushagak Rivers, southwest Alaska. The objects were brought home by Capt. J. A. Jacobsen from his trip of 1881-83, and preserved at the Museum for Ethnology in Berlin. Many

of these small wooden ornaments, worn in pairs on the middle and index fingers, look like the Eskimo wooden face masks in miniature, and a few can be considered as rattles. The Athapaskans of the Yukon took over these finger ornaments from Eskimos. The author makes comparisons between the Eskimo ornaments and the rattles of the Tlingits, Haidas and Tshimshians of Yakutat, but he finds their derivation from the Indian rattles impossible. The Eskimo finger masks must be considered a relatively late cultural achievement in a limited area. **Copy seen:** DLC.

28771. DOLGIKH, BORIS OSIPOVICH. Kety. Irkutsk-Moskva, Ogiz, 1934. 136 p., 11 illus., 28 text tables. 93 refs. **Title tr.:** The Kets.

Contains a monograph, based on the subarctic census of 1926-27 taken by the author among the Kets or Yeniseians, and on literature. Their demography and economy is chiefly dealt with, and comparison is made with those of other north Siberian peoples (statistical data given in tables). Two groups of nomadic Yeniseians were found: one on the upper Taz, the other on the Podkamennaya Tunguska River. In 1926 they numbered 995, and their rate of increase was 13 per thousand yearly; 81 percent of the population lived by hunting. The history of the Yenisey valley and its population, the ethnic character of Yeniseians (name, language, relations with other northern peoples), their social organization and class differentiation are outlined, and a sketch given of cultural conditions, dwellings, clothing, health, hygiene and diseases. A shamanistic performance on the Podkamennaya Tunguska in 1926 is described. Public schooling and consumer cooperatives are mentioned, etc. **Copy seen:** NN; microfilm in DLC.

28772. DOLGIKH, BORIS OSIPOVICH. Naselenie poluostrova Taimyra i priligaŭshchego k nemu raŭona. (Sovetskaiā Aziā, 1929. god 5, no. 2, p. 49-76, sketch map, tables) **Title tr.:** Population of the Taymyr Peninsula and the nearby region.

Contains description of the nature of the Peninsula and its inhabitants: Tawgi-Samoyeds (1,242), Tungus (1,444), Dolgans (538), Yakuts (581), and Russians (346), according to the census of 1926-27. Their physical appearance, organization of the native clans, occupation of the people, and the (then) present administrative organization of the region

are dealt with. This paper was emended by P. E. Ostrovskikh, q. v.

28773. DOLGIKH, BORIS OSIPOVICH. Nekotorye dannye o zaklŭchenii braka i svadebnom obrŭade u ketov v proshlom. (Akademiā nauk SSSR. Institut etnografi. Kratkie soobshcheniā, 1952. vyp. 16, p. 26-34) 12 refs. **Title tr.:** Some data on marriage arrangements and on wedding customs among the Kets in the past.

Contains material collected in 1926 at Podkamennaya Tunguska where the author participated in a Ket wedding celebration, also in 1948 on Chernyy Island in the District of Yartsev, where women were interviewed. The customs described were still in use around 1920. Changes after collectivization and the establishment of kolkhozes are noted, e. g. the exogamy of phratries and the kalym were abolished. Earlier descriptions of the Ket wedding and customs of neighboring peoples are noted comparatively. Differences from customs of Ostyaks and Samoyeds, and the many features common to Ket and Khakas peoples are mentioned.

28774. DOLGIKH, BORIS OSIPOVICH. Plemiā u narodnostei severnoi Sibiri. (In: Vsesoŭŭnyi geograficheskiĭ s'ezd. 2nd, Leningrad, 1947. Trudy, 1949, t. 3, p. 340-54) 8 refs. **Title tr.:** The tribe among the nationalities of northern Siberia.

Contains discussion on the social organization of northern Siberian peoples: the former and more recent (up to 1926-27) situation among the Yukaghirs, Samoyeds and Tungus, and the relation between dialects and social structure is investigated. A distinction is made between "rod" (family, clan) and "plemiā" (tribe). Terminology used by the Russian administration since the 16th century is scrutinized in an effort to clarify what the terms "rod" and "plemiā", "volost", "uprava", etc., signified. Conclusion is drawn that first two terms were used to denote not merely administrative divisions or regional units, but native ethnic units, clans and tribes.

28775. DOLGUSHIN, L. D. Novye dannye o sovremennom oledeneniï Urala. (Voprosy geografii, Sbornik 15, 1949. Fizicheskaiâ geografiâ, p. 147-86, tables, illus., diagrs., maps) 22 refs. **Title tr.:** New data on recent glaciation of Ural.

Permanent snow-patches, but not glaciers, were considered until recently to occur in the Ural. The first glacier was discovered by A. N. Aleshkov on the eastern slope of Mt. Sablya in 1930. Subsequent investigations are summarized and 27 embryonic glaciers briefly described. The five principal or most extensively studied glaciers (Rikhtera, Voyeykova, Grigor'yeva, Yugra and Mansi) are dealt with in greater detail, partly from the author's observations in 1932-1947. In general they are characterized as cirque glaciers ("karovyl lednik"), small in size but of considerable depth, on eastern or northeastern slopes, below the snow-line. "Motion, glaciological features, and alimentation of the glaciers are discussed. Ablation is chiefly a factor of atmospheric convection: as a result of the dense cloud cover in the region." The controversial views of the Soviet scientists (S. G. Boch, S. V. Kalesnik) on the origin of these glaciers are also discussed.

28780. DONNER, KAI, 1888-1935. Beiträge zur Frage nach dem Ursprung der Jenissei-Ostjaken. (Suomalais-ugrilainen seura. Aikakauskirja, 1920. v. 37, no. 1, p. 1-21) **Title tr.:** Contributions to the question of the origin of the Yenisey-Ostyaks.

Contains linguistic comparison of 48 Yeniseian with Tibetan and Chinese words. Conclusions: Yeniseian is related mostly to the Si-hia and Tibetan languages; Yeniseians differ in racial appearance from Samoyeds and Altaians, and might be identified with the "blond

Kirghizes" mentioned in Chinese chronicles. The Yeniseians lived formerly on the upper Yenisey and in the Sayan Mts. The author visited those in the Sym and Kas River region (roughly 60° N. 90° E.) in 1912, found them to be hunters and fishers, without reindeer and very poor. Yeniseians then totalled about 1,100 persons, dwelling mainly between the Sym and Dudinka Rivers.

28781. DONNER, KAI, 1888-1935. Ornaments de la tête et de la chevelure; quelques mots sur leur signification. (Suomalais-ugrilainen seura. Aikakauskirja, 1920. v. 37, no. 3, p. 1-22, 6 illus.)

Title tr.: Head and hair ornaments; some words on their significance.

Contains comparative ethnological essay on headgear among arctic and other peoples. The Samoyed-Ostyak shamans do not cut their hair; they believe man's spirit to dwell in the heart and his soul in the head or brain; hence a former Ostyak practice of eating the heart and scalping an enemy to ensure complete destruction of his soul. The Samoyed and Ostyak shamans in performance of their duties wear a cap, for it conceals their power in its ribbons, which represent long hair, the privilege of rulers, priests and free men. Another important ornament of similar significance is horns worn on the head. Samoyed shamans on the Ket River wear an iron headpiece with iron horns in imitation of a reindeer's. Horned headgear is used also by Yeniseian and Tungus shamans, **Copy seen:** InU.

Contains linguistic presentation of theory that the Samoyedic š- and s- in certain cases developed from the original *k-. **Copy seen:** InU.

28783. DONNER, KAI, 1888-1935. Zu den ältesten Berührungen zwischen Samojeden und Türken. (Suomalais-ugrilainen seura. Aikakauskirja, 1924. v. 40, no. 1, p. 1-42) **Title tr.:** On the oldest contacts between the Samoyeds and Turcs.

Contains linguistic investigation of Turcic loan-words in Samoyedic, probably borrowed not earlier than 500 B. C. and not later than 400 A. D. From this and evidence of old Chinese chronicles, it is

suggested that after disintegration of the Old Uralic linguistic group (about 2500 B. C.), its Finno-Ugric branch came into contact with Indo-Iranian peoples, and the Samoyedic branch with some Proto-Turcic people. The latter contact, very close and of long duration, occurred before the original Samoyedic language disintegrated into several dialects (about 500 B. C.). At that time the Samoyeds probably occupied territory in, or east of the Urals on the Irtysh and Ob' Rivers, now inhabited by the southern Voguls and Ostyaks. There they met and intermingled with the Turcic tribe Ting-ling; later they were pushed farther north. **Copy seen:** InU.

28784. DONOVAN, DESMOND T. The Jurassic and Cretaceous stratigraphy and paleontology of Traill Ø, East Greenland. København, C. A. Reitzel, 1953. 150 p. illus. 25 plates (incl. 3 fold. maps), 5 sketch maps, diagrs. (Meddelelser om Grønland. Bd. 111, nr. 4) 152 refs.

Contains a report on the eastern part of Traill Ø between 72°-73° N. and 22°-23°15' W. The study was made in July-Aug. 1949 and 1950 during the Danish East Greenland Expedition. The Mesozoic rocks of the region form part of a belt extending from Scoresby Sund at 71°30' N. to Kuhn Ø at 75° N. The stratigraphy is described in some detail and compared with that in other parts of Greenland. More than 100 fossil specimens are listed with references, descriptions, and locations. Notes on structure, igneous rocks, and geologic history are included. **Copy seen:** DGS.

28785. DONOVAN, J. A., Jr. Cold weather uniforms. (Leatherneck, Oct. 1950. v. 33, no. 10, p. 51-53, illus.)

Contains an account, based largely on experience during World War II with the ordinary clothing worn by U. S. Marine Corps personnel in cold weather conditions as distinct from special clothing and equipment used in extreme temperature and weather conditions of the Arctic. The layer principle is applied, with successive donning of parts as the temperature drops. Individual items of clothing are described with remarks on their use and care (especially footwear), and on their cost. **Copy seen:** DLC.

Title tr.: Tentative estimate by aerial survey, of Greenland seals in the White Sea.

Contains description of estimating method (with two air photos showing basic material) and the work of small

teams (three men) based on Morzhovets Island in the Gulf of Mezen', Feb. 23-May 15, 1927. Regions where the seals congregate are Morzhovets and Konushin Islands in the Gulf of Mezen' (Mar.-Apr.), and in Orlovskiy Bay and along the Kanin Peninsula coast (Apr.-May). Summary in German, p. 23-28.

28792. DORSEY, GEORGE AMOS. 1868-1931. A cruise among Haida and Tlingit villages about Dixon's Entrance. (Popular science monthly, June 1898. v. 53, no. 2, p. 160-74, 8 illus.) Abbreviated German translation and 7 illus. *pub. in:* Globus, Dec. 1898. Bd. 74, no. 21, p. 358-62.

Contains account on author's four-month trip to the Haida Indians in the region of Masset (Queen Charlotte Islands) in summer 1897. It was made for the Field Museum, Chicago, and he was accompanied by the Museum photographer, E. P. Allen. Old buildings, totem poles, grave posts, remarkable graves of

chieftains and shamans, tattooed persons, basket-making, etc. were investigated, described and photographed. Anthropological description of the Haida type is given. The Tlingit villages, Old and New Tongass, in Alaska were also visited, the totem poles and graves, and a Tlingit shamaness' grave on Duke Island were investigated. Purchase of museum objects, making of photographs and measuring of heads was carried out everywhere. Modern civilization was found to have already destroyed most of the ancient culture. **Copy seen:** DLC.

DORSEY, HERBERT GROVE, Jr., 1912- . Meteorological factors affecting Alaskan development. See Alaskan Science Conference, Nov. 1950. Proceedings, 1951. No. 20117.

28793. DORSEY, HERBERT GROVE, Jr., 1912- . Some meteorological aspects of the Greenland ice cap. (Journal of meteorology, Sept. 1945. v. 2, no. 3, p. 135-42, 16 charts) 6 refs.

Contains a discussion of meteorological problems relating to Hobbs' glacial anticyclone theory. Three major points (1) the icecap as a cold source, (2) as a barrier to cyclonic storms, and (3) nourishment of the icecap, are discussed in light of data obtained from modern surface and upper air observations and from the 1930-31 icecap stations (British Arctic Air Route Expedition, 1930-1931; Deutsche Grönland-Expedition Alfred Wegener, 1929 u. 1930-1931). In each case actual synoptic situations from Greenland weather station data are given and illustrated by charts. Conclusions are that: (1) "important outbreaks of Ice Cap air require a favorable stage in the general circulation and are not due to 'strokes' of the Glacial Anticyclone"; (2) the main barrier to the passage of cyclonic storms is not the glacial anticyclone but the topographic barrier of the icecap itself; cyclone transits are therefore governed by the general atmospheric circulation and possible at any time of year, fall and winter being most favorable; (3) the icecap is nourished by normal precipitation processes, i. e. cyclonic precipitation on the marginal zones, orographic on the higher slopes, little nourishment being obtained from sublimation deposits. **Copy seen:** DLC.

28794. DORST, J., and P. STAHL. À propos de traces de rongeur relevés

sur la côte ouest de Groenland. (Mammalia, June 1952. t. 16, no. 2, p. 93-96, text map) **Title tr.:** On traces of a rodent encountered on the west coast of Greenland.

With the summer 1950 party of the French Polar Expedition, Mr. Stahl found a plastic spectacles case lost by someone of the 1948 or 1949 party at approx. 69°43' N. 50°10' W. The case showed traces of having been gnawed by some rodent, the size of a lemming. The latter however, inhabits the north and east coasts of the island. Having excluded the local rabbit and rats introduced by the Expedition, the authors raise the question of a lemming present now in West Greenland, and suggest future expedition members seek it. **Copy seen:** CaMAL.

Contains a study of the lipid content in the adrenal of rats exposed to various types of stress, and at rest. Exposure to cold (or treatment with formaldehyde) resulted in hypertrophy of the cortex and decrease in its lipid content; these changes are believed to be related to increased activity and increased production of the adrenal cortical hormones. **Copy seen:** DSG.

28796. DOS PASSOS, CYRIL FRANKLIN. The distribution of *Oeneis taygete* Geyer in North America with descriptions of new subspecies (Lepidoptera, Satyridae). (American Museum of Natural History, New York. American Museum Novitates, 1949, no. 1399, p. 1-21, illus.)

Contains descriptions of four subspecies of *Oeneis taygete* (three are described as new) with synonyms, critical notes and list of localities. Three subspecies, *taygete*, *gaspeensis* (Gaspé National Park, Quebec), and *fordi* cover a large arctic area, from Bering Strait to Labrador and Baffin Island. **Copy seen:** MH-Z.

28797. DOS PASSOS, CYRIL FRANKLIN, and L. P. GREY. A genital survey of Argynninae (Lepidoptera, Nymphalidae). (American Museum of Natural History, New York. American

Museum novitates, 1945, no. 1296, p. 1-29, illus. 1-54) 88 refs.

Contains a description of male and female genital armature of butterflies of the subfam. Argynninae, a systematic list of 51 species (p. 3-14), with synonyms, critical notes, and data on distribution. *Boloria improba* (Tornetrask, Swedish Lapland), *B. polaris* (Rama, Labrador) and *B. chariclea* (Mount McKinley National Park, Alaska) are included.

Copy seen: MH-Z.

28802. DOUGLAS, GEORGE VIBERT, 1892- , and others. Notes on localities visited on the Labrador coast in 1946 and 1947. Ottawa, 1953. 67 p. illus. 9 maps (5 fold.). (Canada. Geological Survey. Paper 53-1) 16 refs. **Other authors:** N. R. Goodman, G. C. Milligan, C. H. Smith, and H. J. MacLean.

Contains general description of the coast from the Strait of Belle Isle to Cape Chidley, followed by more detailed notes on geology, topography, and mineral occurrences of all or parts of the following regions: Strait of Belle Isle; Chateau Bay - St. Lewis Inlet; Snug Harbour - Hawke Bay; Domino Harbour; Paradise River - Sandwich Bay; Packs Harbour; Indian Harbour; Tuchialic-Kaipokok - Canairiktok River; Nain; Kiglapait Mts.; Cape Mugford; Ramah Bay - Cape Chidley. **Copy seen:** DGS.

28803. DOUGLAS, GILEAN, and R. MacGREGOR. Diamond rush in Canada. (Canadian mining journal, Jan. 1952. v. 73, p. 63-64, illus.)

Describes unsuccessful searches for a reported diamond field in the Nottaway River basin, near James Bay, Northern Quebec, in 1910. **Copy seen:** DLC.

28804. DOUGLAS, MARY C. VIBERT, and R. N. DRUMMOND. Glacial features of Ungava from air photographs. (Royal Society of Canada. Transactions, 1953. v. 47, sec. 4, p. 11-16, illus., text map) 6 refs. **Abstract pub. in:** Geological Society of America. Bulletin, v. 64, no. 12, pt. 2, p. 1413.

Contains some results of a study of air photographs of the Quebec - Labrador Peninsula north of 50° N. Drumlins, eskers, beaches, and bedrock outcrops, foliation, etc., were plotted from the photographs. Only the glacial features are discussed here. A striking drumlin-esker pattern radiating from Ungava Bay brings a tentative suggestion that Quebec-Labrador ice may have flowed out from Baffin Island during the last glaciation. Problems involved in such a theory are briefly discussed.

Vestnik, Aug. 1950. t. 5, no. 8, p. 18-20, tables) **Title tr.:** The present situation of the fish resources in the main reservoirs of the northwestern part of the U.S.S.R.; the All-Union Scientific Research Institute of Lake and River Fisheries.

The northwestern part of the U.S.S.R. includes three seas, many rivers and over fifty thousand lakes, among them forty-one thousand lakes in the Karelo-Finnish SSSR, some twenty-five hundred in Arkhangel'sk Province, and many in Kola Peninsula. The problems of ichthyological classification of these reser-

voirs are discussed, and the resources of main commercial fish species (salmon, *Coregonus lavaretus*, whitefish, White Sea herring, etc.) are estimated according to the catch of 1930-41. Measures for strengthening the fishing industry are stressed. The paper was delivered to the Conference on reproduction of fish resources held in Leningrad in March 1950.

General physical geography of this region in the vicinity of the Alaska Highway between Whitehorse and the Alaska boundary, is presented. Nine major vegetation types are described, with lists of characteristic plant species and birds. The geographic distribution of bird species is discussed with reference to periods of continental glaciation, the survival of certain plants and birds in various unglaciated "refugia," and their spread following the retreat of the glaciers. The region studied "is one occupied by migrations from persistent populations and is a collecting and mixing ground of related forms." A list of species by geographic relationships (i. e. circumboreal, boreal North American forests and swamps, Cordilleran, etc.) is followed by an annotated list of 107 species giving locality, habitat, and date seen.

Contains a critical revision of this genus of dipters divided by the author into six subgenera. A morphological sketch and notes on the biology, keys to the subgenera and species are given. Then follow descriptions of 28 species (incl. diagnoses of eight new species) with synonyms, critical notes and data on distribution. At least four species native to northern Scandinavia are included.

Copy seen: MH-Z.

28831. DUFF, F., and others. The response in vasodilator substances of the blood vessels in fingers immersed in cold water. (Journal of physiology, July 1953. v. 121, no. 1, p. 46-54, illus. table) 5 refs. *Other authors:* A. D. M. Greenfield, J. T. Shepherd, I. D. Thompson, and R. F. Whelan.

Immersion of a finger in cold water causes intense vasoconstriction for about six minutes, followed by large vasodilatation. Administration of acetylcholine or histamine after immersion has started, either by intra-arterial injection or by electrophoresis, did not advance the onset of vasodilation. However, it is doubtful whether these substances reach the vessels when given by either route. The fact that atropinized fingers have a normal cold response, suggests that acetylcholine plays no part in the reaction.

28832. DUGAL, LOUIS-PAUL, 1911- . Effects of cold, ascorbic acid, and age on "formaldehyde-induced" arthritis in the white rat. (Canadian journal of the medical sciences, April 1951. v. 29, no. 2, p. 35-47, diags., tables) 21 refs.

Contains an account of a series of experiments on rats with formaldehyde-induced arthritis. The latter is considerably aggravated by exposure to cold; is significantly diminished by ascorbic acid in adult rats, but not in young ones; and is accompanied in animals exposed to cold, by severe edema of the penis which is also reduced by large doses of ascorbic acid. Summary in French.

28833. DUGAL, LOUIS-PAUL, 1911- , and G. FORTIER. Nécessité de l'acide ascorbique pour l'acclimatation du singe (Rhesus) au froid. (Académie des Sciences, Paris. Comptes rendus, Jan. 2, 1952. t. 234, p. 138-40) *Title tr.:* Necessity for ascorbic acid in acclimatization of the Rhesus monkey to cold.

Contains a report on Rhesus monkeys exposed for two hours to -20°C , following various degrees of cold acclimatization and ascorbic acid intake. Long exposure to moderate cold did not increase the animals' subsequent resistance to very low temperature, if they did not receive 25 mg. ascorbic acid per day, a dose more than sufficient under normal conditions. An intake of 325 mg. of ascorbic acid under similar conditions insured an easy acclimatization and resistance to extreme cold.

Copy seen: DLC.

28834. DUGAL, LOUIS-PAUL, 1911- , and G. FORTIER. Nécessité de l'acide ascorbique pour l'acclimatation du singe (Rhesus) au froid. (Union médicale du Canada, Mar. 1952. t. 81, p. 262-65, 4 tables) 3 refs. *Title tr.:* Necessity for ascorbic acid in acclimatization of the Rhesus monkey to cold.

Contains an account of experiments with animals fed various amounts of ascorbic acid and kept in moderately cold environment ($+10^{\circ}\text{C}$) before being exposed to a temperature of -20°C . Resistance to extreme cold was not increased if the animals did not receive a daily dose of 25 mg. of the vitamin during the acclimatization period. Animals receiving under similar conditions 325 mg. ascorbic acid daily acclimatized well and developed resistance to cold.

28839. DUNBAR, MAXWELL JOHN, 1914- . Arctic and subarctic marine ecology: immediate problems. (Arctic, July 1953. v. 6, no. 2, p. 75-90, text maps, diagr.) 28 refs.

The Arctic and sub-Arctic are defined in terms of marine environment. Differences in biological productivity between the areas are discussed, with consideration of the chemical and physical factors involved. Plankton production and biology, benthonic and littoral fauna, and fishes and marine animals present problems related to North American fisheries and Eskimo needs. In each case problems are listed for future study, a discussion of systematic and zoogeographic problems closing the report. Maps show (1) zones of the marine environment, (2) bathymetry, and (3) major currents of northern seas. Diagram illustrates the biological cycle in arctic and subarctic marine zones.

28840. DUNBAR, MAXWELL JOHN, 1914- , and H. H. HILDEBRAND. Contribution to the study of the fishes of Ungava Bay. (Canada. Fisheries Research Board. Journal, Aug. 1952. v. 9, no. 2, p. 83-128, illus.) 67 refs. *Calanus* series, no. 2.

Contains results of the eastern arctic marine investigations started in 1947 by the Fisheries Research Board. "The aquatic environment of the Ungava Bay area and watershed is described. Forty-four species of fishes are recorded [and Ungava and other arctic locations given], belonging to twenty-one families. Twenty-nine are marine forms, two are

anadromous, and thirteen are predominantly or entirely fresh-water forms. Seventeen are new records for Ungava Bay, and a few are new for the whole of the Canadian Eastern Arctic"—Author's abstract. **Copy seen:** CaMAI; DLC.

28841. DUNBAR, MAXWELL JOHN, 1914- . Greenland during and since the Second World War. (International journal, Spring 1950. v. 5, no. 2, p. 121-40) 20 refs.

Contains brief survey of recent publications, geography and resources (particularly cryolite) of Greenland; developments there during World War II; defense, the sledge patrol, administration; post-war development in government, fisheries. **Copy seen:** NN.

28842. DUNBAR, MAXWELL JOHN, 1914- , and **E. H. GRAINGER.** Station list of the *Calanus* expeditions, 1947-50. (Canada. Fisheries Research Board. Journal, Aug. 1952. v. 9, no. 2, p. 65-82, 8 charts) *Calanus* series, no. 1.

Contains list of 167 stations where biological or oceanographic observations or collections were made, 1947-50, in Ungava Bay and adjacent waters. Information given for each station includes lat. and long., depth (meters), and type of work done. Charts show positions of the stations. Designated *Calanus* series no. 1, this is intended for use with forthcoming papers on results from Eastern Arctic investigations of 1947-50. For convenience, it is stated, all the expeditions are to be termed *Calanus* though the research vessel itself (built in 1948) was used in 1949-50, and smaller locally-owned vessels chartered in earlier years. **Copy seen:** CaMAI; DLC.

28847. DURLACH, Mrs. THERESA MAYER, 1891-. The relationship systems of the Tlingit, Haida and Tsimshian. New York, G. E. Stechert, 1928. 3 p.l., 177 p., fold. table at end. (American Ethnological Society. Publications, v. 11) 32 refs.

Contains a study on family and clan organization among these three Indian tribes, based on terms for relatives by blood and marriage, as they appear in genealogies and native texts (myths, war stories, etc.). For the Haida and Tlingit, complete sets of terms were obtained (the latter from Mr. Shtridge, q. v.), and for the Tsimshian the available printed material was used. The relationship system of each tribe is described, comparisons made among the three, and some conclusions drawn on their cultural relations. The Tlingit and the Haida seem to have derived from Tsimshians the use of reciprocal terms of affinity. Between the Tlingit and the Tsimshian there are few points of resemblance in relationship systems and terminology. A survey of the social organization of these three tribes has shown a rather closer affiliation between the Haida and the Tlingit than between Tsimshian and either of these. There is very little to indicate the trend of cultural influence between the Tlingit and the Tsimshian. Introduction gives a review of theories on family organization and development from Morgan to Kroeber.

28854. EADE, K. E. Preliminary map Unknown River (Ossokmanuan Lake, east half), Labrador, Newfoundland. Ottawa, 1952. map sheet, 36 x 42 in. (Canada. Geological Survey. Paper 52-9)

Map (scale 1 in.: 2 mi.) with detailed marginal notes, covers an area at the head of the Hamilton River, western

Labrador, between 53°-54° N. and 64°-65° W. Topography and drainage features are discussed, followed by a description of the bedrock geology. Rocks range in age from Archean to Proterozoic (Early to Late Precambrian); the most abundant are paragneisses of various types. Metamorphosed granodiorite, basic intrusions, and related diabase dikes are also exposed at several locations. No mineral occurrences of economic value have been found.

Trudy. 1930. t. 7, p. 63-127, illus., plates 1-7, map) **Title tr.:** Geological investigation in the Pinega River basin and in the Pinega-Dvina watershed in 1928.

Contains results of the author's work with the Pinega Scientific Expedition in 1928: general geological descriptions of the basin of the Pinega, and its tributaries, the Sura, Yavzora, Yula, Yuras, Pokshenga and some other rivers; the watershed between the Pinega and the Northern Dvina; and the right bank of the Northern Dvina. Data are given on the post-Pleistocene and Permian deposits, arranged by the rivers; 20 species of fossil molluscs are listed; various soils and useful minerals are noted: plasters, sandstones, limestones, clays, etc. Geological map of this part of Arkhangel'sk province is included. Summary in English.

Copy seen: MH-Z.

28862. EDEMSKIĬ, MIKHAIL BORISOVICH, 1870-1933. Kuloisko-Mezenskii kraf; étnologicheskie nablúdeniia v 1927 g. (Vsesoiúznnoe geograficheskoe obshestvo. Izvestiia, 1929. t. 61, vyp. 1, p. 81-117, 16 illus.) **Title tr.:** The Kuloi-Mezen' district; ethnological survey in 1927.

Contains account of the basins of the Kuloi and Mezen' Rivers (65°-66° N. 44°-46° E.) and their inhabitants. The landscape (forests, bogs, lakes, tundra) is described and communications noted: two water routes to Arkhangel'sk one by sea, the other by rivers. The inhabitants are Russian settlers (mostly), nomadic Samoyeds in the tundra, and Izhemtsy, a branch of Zyryans. The material culture is described: houses of Russian type; clothing of Samoyedic type worn, even by the Russians in some

places, throughout the year; occupation: agriculture in the South, fishing and hunting in the North, and lumbering the most important industry in recent years. As modern and traditional modes of life meet, conflicts occur. Pastimes, games and songs are described and texts of Russian folk poetry given: Christmas, lyric, and two epic songs. Summary in French, p. 116-17.

Contains a report of experiments with subjective observations on pain caused by a cold stimulus not in direct contact with the skin. It was found that the aroused pain is pure, pressureless and completely adaptable; it disappears without being followed by a residual pressure; its disappearance under continuous cold stimulation is a true adaptation and not the result of injury to the end organ; cold sensation always precedes and usually follows pain; the time required to re-arouse pain is usually greater than that required for its first arousal.

Contains a review of the main contributions to the study of the effects of low temperature on normal man, supplemented by pertinent observations on animals. Hypothermia, its physiology, pathology and lethal effects as well as therapy are treated first, followed by similar accounts on trench foot, immersion foot, chilblains and frostbite.

Contains an account of 71 cases among soldiers participating in the Korean winter campaign (1950-51), with resulting necrosis in all, and with gangrene of digits and foreparts of the feet in several patients. The clinical picture in three stages is described. Treatment of the acute stage, consisting chiefly in administration of antibiotics and sympatholytic drugs, is discussed as well as the extent of gangrene, required amputation, etc. An evaluation of the therapeutic methods is presented, also some indications of sequelae and predisposition.

Contains a descriptive monograph on customary laws of the Lapps (p. 8-89), Karelians (p. 89-159), and Samoyeds (p. 158-231). Each of the three parts deals with family laws (including description of wedding customs), juridical relations of the family members in general, guardians and guardianship, means of acquiring ownership, penal laws, community life, courts and mob justice. The study is based on literature (the periodical *Arkhangel'skiĭ gubernskii vedomosti* is frequently cited), and on archival materials (mostly documents by churchmen), also on the Tsar's orders of 1606, 1614, 1648, and 1686 (prohibition to sell alcoholic beverages to the Lapps, etc.). The collection of Lapp laws by Georgii Tarent'ev, and 25 Samoyed laws noted down by I. Sin'sov (both priests) are explored. Each of the three parts is introduced by a general survey of its people, their mode of life and economy, relations with the Russian merchants, officials and churchmen, etc.

Contains introductory remarks on the poor economic and cultural conditions of the area prior to the Revolution, with 0.7 percent literacy and only four public libraries; the role of political exiles in spreading Marxist literature; illegal Marxist libraries. Present-day conditions are then noted: nearly 600 public libraries in cities, towns and villages, with 1,266,000 books; the A. S. Pushkin Science Library of Yakutsk of over 150,000 volumes, its genesis and activities; district libraries (37), with mobile book service to the village libraries (which number 105), children's libraries (5), club libraries (440); libraries with 10,000-20,000 volumes in larger settlements including Olekminsk, Amginsk, Aldan, etc. Data are given on numbers of readers, circulation, etc., and on lectures at the libraries, and publications; bibliographies; book exhibits, conferences, soirées, etc.; plans and requirements for the future.

28875. EHA, SILVIO. The pre-Devonian sediments on Ymers Ø, Suess Land, and Ella Ø (East Greenland) and their tectonics. København, C. A. Reitzel, 1953. 105 p. illus. 3 fold. plates, 3 sketch maps, diagrs. (Meddelelser om Grønland, Bd. 111, nr. 2) 48 refs.

Contains a detailed description of the stratigraphy and structure of the folded, non-metamorphic sediments in an area between 72°45'-73°30' N. and 24°45'-25°45' W. The study was carried out in 1947-49 as part of the Danish East Greenland Expedition. Late Precambrian through Lower Ordovician sediments are discussed, the individual beds in each formation being described in turn. The large north-south folds and intersecting fault systems are dealt with in detail by regions. Notes are added on veins observed in metamorphic rocks and on some physiographic features.

The course of the isotherm line which connects all points in the Northern Hemisphere having a mean annual temperature of 0° is traced. It enters eastern Finland at about 65°30' N. and describes several curves before it leaves the country at about 70° N. in the direction of Tana Fjord. The climate of Finnish Lapland is discussed in relation to it. Spring and summer begin earliest at about 68° N., where the land is farthest away from both the arctic sea in the north and the Gulf of Bothnia in the south. The same probably holds for winter: in the fall of 1853 the trees at Sodankylä (67°22' N.) lost their foliage earlier than those near Lake Inari to the north (about 69°30' N.). The advance of the seasons to the east and to the west is more difficult to determine. More

thermometer observations than heretofore are necessary to establish whether the isotherm line as it stands is reliable, and also whether it could be drawn in more ways than one. The following observation points, all of them near the isotherm line, are suggested in order to determine its reliability: Kuusamo, Pudasjärvi, Torneå, Muonio, Inari, and Utsjoki. **Copy seen:** DLC.

Vegetative neuroser, förekomst och etiologi (Nordisk medicin, Oct. 20, 1950. v. 44, no. 42, p. 1668-73, tables) 3 refs. **Title tr.:** Studies in internal medicine in North Greenland 1948-1949, II. Vegetative neuroses, occurrence and etiology.

Contains account of an investigation made in Umanak, West Greenland during the winter 1948-49. Neuroses were found to be not infrequent among the local Greenlanders, and are mainly of hysteric or phobic type, a tendency common among primitive peoples. On the other hand, distinct cases of psychosomatic neuroses are rare, and largely confined to the more advanced and educated groups, subjected to western "rush," greater emotional strain, etc. Summary in English.

28880. EHRSTRÖM, M. C. Internmedicinska undersökningar på Nord-Grönland 1948-1949, III. Allergiska sjukdomar och lungemphysem; förekomst och etiologi. (Nordisk medicin,

Oct. 27, 1950. v. 44, no. 43, p. 1707-10, table) 6 refs. **Title tr.:** Studies in internal medicine in North Greenland 1948-1949, III. Allergic diseases and pulmonary emphysema; occurrence and etiology.

Contains a report of a study in the Umanak Distrikt. It revealed that allergic manifestations are rare among Greenlanders of the Distrikt, the few patients (four) belonging to the more educated class, three of them of mixed stock, one an Eskimo. The allergic symptoms appeared closely related to psycho-somatic neuroses. Substantial lung-emphysema is evidently uncommon in northwest Greenland and bronchial asthma is very seldom found among the etiological factors. Summary in English.

28881. EHRSTRÖM, M. C. Internmedicinska undersökningar på Nord-Grönland 1948-1949, IV. Leverförstoring; gallsten och ulcussjukdom; förekomst och etiologi. (Nordisk medicin, Nov. 3, 1950. v. 44, no. 44, p. 1750) 5 refs. **Title tr.:** Studies in internal medicine in North Greenland, 1948-49, IV. Enlargement of the liver; gallstones and peptic ulcer; occurrence and etiology.

In one third of persons examined in Umanak District, the liver was palpated 1-8 cm. below the arch of the ribs; this is attributed to ptosis due to the body structure of the Eskimos. Gallstones are infrequent among the natives but quite common among the Europeans. So far as known, gastric ulcer has been diagnosed with certainty only once. The findings suggest that nutritional factors alone do not produce these diseases. Summary in English.

(Nordisk medicin, Nov. 17, 1950. v. 44, no. 46, p. 1823-25, diagrs.) 9 refs. **Title tr.:** Studies in internal medicine in North Greenland 1948-1949, VI. Blood pressure and vascular sclerosis in relation to nutrition and way of life.

Contains report of a study made in the Umanak Distrikt. Systolic blood pressure is of about the same level as in westerners up to the age of 30, but it tends to rise in older people. Incidence of arterial hypertension is lower than in westerners, but calculated in percent the incidence is greater in Umanak. These cases of hypertension were however, mainly pseudo hypertonia or elasticity-high-pressure with normal or low diastolic pressure. Cases which may be called essential hypertension are rare. Clinical manifestations of arteriosclerosis are common but considerably less so than in Korpo (Finland). Summary in English.

28893. EL'KIN, I. M. Olenevodstvo na Kol'skom poluostrove, Murmanskaya guberniya. (*Komi mu*, 1928. god 5, no. 1, p. 12-15) **Title tr.:** Reindeer breeding on the Kola Peninsula, Government of Murmansk.

Contains an account of the reindeer industry centered around Lovozero. The herds number about 44,000-50,000 head, the herders are Zyryans (46 percent), Lapps (38 percent), and Samoyeds (nine percent). The local Russians do not keep reindeer, and the Zyryans are taking the lead in this industry. Smallholders prevail (about 60 percent of the reindeer-holding families having not more than a hundred animals). The great problems are: finding pastures, the Siberian plague, the gadflies which torment the animals and damage hides.

Contains description of the natural conditions in this large tundra region of northeastern Arkhangel'sk province: its boundaries, climate, vegetation and animal life, the health conditions, especially prevalence of scurvy which could be prevented by eating raw and fatty meat or fish in frozen form, and by exercise; the economic situation and possibility of increasing the population. Vaygach Island is mentioned as being inhabited by semi-nomadic Samoyeds who have no reindeer and use boats and dogs for transportation. *Copy seen:* DLC.

28895. EL'KIN, L. D. Gribkovaia flora v g. Omske i raiionakh Omskoi oblasti. (Vestnik venerologii i dermatologii, Sept.-Oct. 1952. no. 5, p. 56) *Title tr.*: The fungus flora of the city of Omsk and the areas of the Omskaya Oblast'.

Contains a summary of an account of the occurrence of skin fungi in the area in 1929-30, and the author's studies on cultures in 1949-50. Occurrence (in percent) in 1949-50, description of cultures, and a few clinical data are given. *Copy seen:* DSG.

28896. ELKINS, WINSTON A. Needed research on Alaskan fur animals. (In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 355-62, table) 11 refs.

Contains an account of the present condition of wild fur animals and the fur industry (fur seals and fur farm excluded). Game laws, and effect of defense construction on trapping employment are commented on. Table of fur take 1945-50 shows muskrat, beaver, mink and marten the most important furbearers. Research needs in ecology and the effects of land and water changes on the animals are stated, and an outline given of improvements in fur handling, setting up of animal refuges and regulation of trapping. *Copy seen:* CaMAI; DLC.

ELKINS, WINSTON A. Pressing problems in administration of wildlife resources in Alaska. See Alaskan Science Conference, Nov. 1950. Proceedings, 1951. No. 20117.

28897. ELLENHORN, MATTHEW JACK, 1923- Sickle cell trait and frostbite. (U. S. Armed Forces medical journal, Dec. 1952. v. 3, no. 12, p. 1845-51, tables) 12 refs.

Contains a study on the role of sickling in the development of cold injury, its relation to cold agglutinins and to the main blood group agglutinogens. The investigation was carried out on normal and frostbitten Negro soldiers during maneuvers in Jan.-Feb. 1952. The presence of the sickle cell trait did not appear significantly related to causation of frostbite nor is the appearance of the trait influenced by cold exposure. Sickling has no apparent relation to blood group agglutinogens in Negroes or to cold agglutinins in control subjects and in patients with frostbite. *Copy seen:* DSG.

28898. ELLIS, FRANK H. Call it reconquest. (Canadian aviation, May 1944. v. 17, p. 47-48, 94, 96, illus.)

Contains detailed description of the first flight to Alaska, i. e. the First Alaska Air Expedition from Mineola, Long Island, New York to Nome, Alaska, and back in 1920, a distance of 9,000 air miles. The expedition, in four planes (two-seater de Havilland 4 B's) and personnel of eight (named), Capt. St. Clair Street in command, left Mineola on July 15, 1920, and reached Nome Aug. 23. On the return trip they left Nome on Aug. 26, 1920, and landed at Mineola Oct. 20. On its way north, the Street expedition flew from Skagway, Alaska, through the White Pass, to Whitehorse, Yukon Territory, and arrived there Aug. 16, 1920, the first aircraft ever to fly in that territory. It is also noted that in 1913, James V. Martin shipped his airplane north to Fairbanks, and made the first flight at any near-arctic point on the American continent on July 4th, of that year. *Copy seen:* DLC.

28899. ELLIS, FRANK H. Props hewn from sleigh boards; epic of bush fliers' ingenuity. (Canadian aviation, June 1948. v. 21, p. 36-37, 68, illus.)

Describes the construction of two airplane propellers from sleigh boards and moose glue by airmen stranded at Fort Simpson on the Mackenzie River. They were made to replace propellers broken in landing two planes at that place on a trip from Edmonton to Fort Norman, in the Mackenzie District, in 1921, and were used successfully to return to Edmonton.

The propellers are now in the National Museum at Ottawa, relics of the first return flight into Canada's Northwest Territories. *Copy seen:* DLC.

ELLSWORTH, LINCOLN, 1880-1951. *see* Amundsen, R. E. G., and L. Ellsworth. Erste Flug über Polarmeer. 1927. No. 27781.

28900. ELMENDORF, WILLIAM W. Soul loss illness in western North America. (International Congress of Americanists. 29th, New York, 1949. Selected papers, v. 3, *Indian tribes of aboriginal America*, Chicago, 1952, p. 104-114, text map)

Contains summary of a study on the primitive disease theory that illness may be caused by loss or theft of the soul and cured by bringing it back, as found among the natives of western North America. The theory of Asiatic origin of the concept is considered by the author highly unlikely; but diffusional influence from Asia in northwestern North America is considered quite possible, accounting for the seemingly universal Eskimo, the wide-spread Mackenzie Athapaskan, and the universal Northwest Coast cases. *Copy seen:* DLC.

ELSON, JOHN ALBERT, 1923-, *see* Lawrence, D. B., and J. A. Elson. Periodicity deglaciation N. Am. 1953. No. 30362.

28901. ELVEY, CHRISTIAN THOMAS, 1899-. Optical phenomena of the upper atmosphere. (*In*: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 288)

Contains note on the study of scattering, absorption, and emission of light, phenomena which are aids in study of physics and chemistry of the atmosphere. Each of these is briefly discussed, with particular mention of auroras, airglow, and sodium light. *Copy seen:* CaMAI; DLC.

28902. EM, A. RUD. Über das Alter der lappischen Renntierzucht. (Anthropologische Gesellschaft in Wien. Mitteilungen, 1933. Bd. 63, p. 77-81) *Title tr.:* On the age of Lapp reindeer-breeding.

Contains summary of author's investigation among the Lapps, 1928-1930: the old Nordic and Lithuanian loan-words (the latter through the mediation of Finns) for objects connected with reindeer-breeding show that the Lapps

learned this husbandry about the beginning of the Christian era.

28903. EM, R. A. RUD. Wissenschaftliche Beobachtungen während einer Karelienreise im Herbst 1937. (Ungarische Jahrbücher, 1939. Bd. 19, Heft 1, p. 51-76, illus.) *Title tr.:* Scientific observations during a Karelian journey in the autumn of 1937.

Contains a survey of present-day Karelian material culture: agriculture, cattle-breeding, hunting and fishing, with detailed description of ancient tools and implements still in use. Many of them, e. g. boats, fishing hooks and nets, are common to all the Finnish peoples, including Ostyaks and Voguls. The indigenous culture of the Karelians is in process of disintegration: those in Finland willingly accepting western culture from the Finns, and those in the U.S.S.R. subject since 1920, to extinction as a national entity. Genuine Karelian culture flourished in the period 500-800 A. D. and subsequently fell under several cultural influences: Novgorodian, Russian-Byzantine, Swedish-Finnish, and finally the West European in Finnish style. The author visited several Karelian villages in the region of Suojärvi. *Copy seen:* DLC.

28904. EMERSON G. C. Helicopter operation in mountain mapping. (Canadian aviation, June 1951. v. 24, p. 43, 118, 120, illus.)

Discusses the use of helicopters in mapping of mountainous areas, and the factors of special significance for helicopter mountain flying.

28905. EMMONDS, G. T., and G. P. L. MILES. Shamanistic charms. (Ethnologia crannorensis, 1939. v. 4, p. 31-35, 3 plates)

Contains general notes on shamanism among the peoples of the northwest coast of North America, and description

of 12 charms carved from whale ivory, bone or horn, in animal or human form, or an intricate combination of both, representing a shaman's dream-like conceptions. The articles, worn about the neck by shamans in performance, are preserved in the Cranmore Ethnographical Museum (Chislehurst, England), without, however, indication of the people or locality of their origin. The carvings may be attributed tentatively to South Alaskan Indian tribes and natives of British Columbia.

28906. EMMONS, GEORGE THORNTON, 1852- . The Tahltan Indians. Philadelphia, University Museum, 1911. 120 p. 28 text illus., sketch map, 19 plates incl. 2 col. (Pennsylvania. University. University Museum. Anthropological publications. v. 4, no. 1)

Contains a monograph on the Tahltan people, who are centered about the upper reaches of the Stikine River in British Columbia, their territory overlapping in some places with that of the Tlingits of Southeast Alaska. The material presented was obtained during the summers of 1904 and 1906, and covers all aspects of the Tahltan life and culture. Descriptions are given of their physical and mental character, habitations, household implements and utensils, clothing and ornamental art, food and smoking (ordinary and ceremonial pipes, some made by the Haida), hunting and fishing, pastimes, customs of the life cycle, feasts and ceremonies, beliefs and shamanism, medical practice, war customs, folklore, etc.

28909. ĖNDĪŪKOVSKIĪ, A. G. Saamskil (loparskil) āzyk. (*In:* Āzyk i pis'mennost' narodov Severa, 1937. chast' 1, p. 125-62) 17 refs. *Title tr.:* The Saami (Lappish) language.

Contains phonetics, morphology, syntax and lexical notes on the language of the Kola Lapps, based on the Kildin dialect. Only 1,806 Lapps were living in Russia in 1933, or 5.7 percent of the total population in the district of Murmansk. Characteristics of the language and its three dialects, and a short history of linguistic investigations are given. The Russian Lapp literature is poor: two editions of Matthew's Gospel (1878 and 1894), and an elementary school book (1895) having been published. A new Latinized alphabet was introduced in 1933, and five text books for school children published in 1934-35.

28910. ENGEL, FRANK LIBMAN, 1913- . Observations on the interrelationship between insulin, the adrenal cortex and non-specific stress (cold) in adipose tissue glycogen synthesis in the rat. (Endocrinology, July 1951. v. 49, no. 1, p. 127-35, fig., 4 tables) 12 refs.

Contains an experimental study on rats showing, *inter alia*, that exposure of normal, fasted rats to 4° C. for 48 hrs. has no effect on the glycogen levels of the interscapular fat tissue and of the liver, or on the blood sugar after glucose administration. Insulin administration caused an increase in the interscapular adipose tissue glycogen in the exposed rats as compared to controls, and a decrease in blood sugar levels. Exposure of adrenalectomized, cortizone-maintained rats to 4° C. for 24 hrs. did not modify the concentration of interscapular adipose tissue glycogen after insulin and glucose, but liver glycogen and blood

sugar were lower than in similar controls kept at room temperature.

28912. ENGINEERING, London. Determination of the thickness of glacier ice. (Engineering, Apr. 18, 1930. v. 129, p. 508)

"The seismic method with which the Wegener Greenland Expedition determined the thickness of the inland ice is described. Dynamite charges of 2-13.5 kg. were exploded in the ice. The surface detonation wave and the wave reflected from the rocky base of the ice were received 1-2 km. from the hole. The waves are received and magnified by a seismograph, transferred to a microphone which is in circuit with a battery and galvanometer, the oscillations of which are recorded on a photographic film. The longitudinal waves traveled at an average velocity of 3400 m./sec. and the transverse waves at 1600 m./sec. Ice thicknesses of 330, 600, 750 and 1250 were obtained at distances from the coast up to 40 km. inland. The upper level of the ice surface increased inland from 970-1570 m."—SIPRE.

mochimica acta, Nov. 1953. v. 4, no. 5, p. 213-24, graphs, tables) 12 refs.

"The oxygen isotopic analyses of marine and fresh waters, in conjunction with salinity data in the former case, provide information on evaporation and condensation processes in existing water bodies. A large fraction of the fresh water removed from the warm ocean current areas is isotopically similar to the ice and snow found in Greenland and in the mountains in the northwest of North America rather than to the waters in the Great Lakes or typical rain water. The lowering of salinity in the cold Alaskan and California currents seems to be primarily due to meltwater from snow and ice. The existence of large bodies of ice and snow seems to play an important part in determining both isotopic composition and salinity of shallow ocean waters. The isotopic composition of fresh water varies over a large range and is dependent upon its history and source. The deviation of the concentration of O^{18} of melted glacial ice from that of the standard is -21 percent as calculated from the salinity and O^{18} analysis of a water sample collected off the shore of Greenland during the summer."—SIPRE.

Contains a study of one of the oldest known medicinal plants, based on the investigation of old herbals, medical books and literature data (for vernacular names); sketch map 3 shows the actual distribution of this herb in Finland, spreading to Kuusamo and Finnish Lapland. Summary in German. **Copy seen:** MH-Z.

28926. ERMAN, GEORG ADOLF, 1806-1877. Bemerkungen über ein bei den Jakuten und in Andalusien gebräuchliches Feuerzeug. (Archiv für wissenschaftliche Kunde von Russland, 1860. Bd. 19, p. 298-326) **Title tr.:** Remarks on a lighter used by the Yakuts and in Andalusia.

Contains account of the primitive technique of making fire. In the Yakut settlement of Lebegine (62°11' N.) the author found a quantity of dried grass (called by the Yakuts, *ke*, or *kö*) which was very effective as an inflammable substance used with a primitive lighter of steel and flint. Such grass used by Yakuts and Tungus in the region of Aldan Mts., was also found by the

author similarly used among the Spaniards of Malaga. Microscopic investigation of the grass is reported. How the Kamchadals learned to make fire is mentioned. The work of Yakut blacksmiths and the old iron mine at Kangalak Ulus near Batamaysk is described and the high quality of Yakut implements made of raw iron and steel noted. The author gathered his information during his journey to Okhotsk in 1828. (*Arctic Bibliography*, No. 4661).

28931. ERSHOFF, BENJAMIN H., 1914- . Beneficial effect of liver feeding on swimming capacity of rats in cold water. (Society for Experimental Biology and Medicine. Proceedings, July 1951. v. 77, no. 3, p. 488-91)

Contains an account of experiments with rats raised on a purified diet containing ten percent whole liver powder. Such animals swam significantly longer in cold (20° C.) water than rats raised on a similar diet, containing the B vitamins (in synthetic form) instead of powdered liver. Thus the protective factor in liver seems to be distinct from any of the known B vitamins.

Copy seen: DLC.

28932. ERSHOFF, BENJAMIN H., 1914- . Decreased resistance of pyridoxine-deficient rats to cold exposure. (Society for Experimental Biology and Medicine. Proceedings, Nov. 1951. v. 78, no. 2, p. 385-88) 15 refs.

Contains an account of experiments with immature animals fed a purified ration containing synthetic B vitamins with and without pyridoxine (vitamin B₆), and exposed to cold from the first day or after 80 days of experimental feeding. In both groups mortality was significantly higher in animals fed a pyridoxine-deficient diet.

Copy seen: DLC; DSG.

28933. ERSHOFF, BENJAMIN H., 1914- . Decreased resistance of riboflavin-deficient rats to cold stress. (Society for Experimental Biology and Medicine. Proceedings, Apr. 1952. v. 79, no. 4, p. 559-61, table) 10 refs.

Contains a report on experiments with animals fed from the time of weaning, a

diet in various degrees deficient in riboflavin (vitamin B₂), and subsequently exposed to a temperature of 2° C., with controls kept at room temperature; adjustment to cold, as measured by length of survival, was significantly impaired in rats fed diets containing 0.5 mg. of riboflavin or less, per kg. of diet.

Copy seen: DLC.

28934. ERSHOFF, BENJAMIN H., 1914- . Decreased resistance of vitamin B₁₂-deficient rats to cold stress. (Society for Experimental Biology and Medicine. Transactions, Dec. 1953. v. 84, no. 3, p. 615-17) 12 refs.

Prolonged exposure to low environmental temperature (2±1.5° C.) significantly increased the vitamin B₁₂ requirement of the rat; animals deficient in this vitamin showed a reduced survival time in the cold environment.

Copy seen: DSG.

28935. ERSHOFF, BENJAMIN H., 1914- , and S. M. GREENBERG. Effects of a transient vitamin A deficiency on subsequent resistance to cold. (Society for Experimental Biology and Medicine. Proceedings, Nov. 1950. v. 75, p. 604-607, table) 9 refs.

Contains a report on experiments with male rats made temporarily deficient in vitamin A, then their deficiency apparently corrected by administration of high doses of this vitamin. When subsequently exposed to cold, such animals showed a markedly impaired ability to withstand the stress. The experiments demonstrate that residual effects of malnutrition may persist long after the deficiencies have been corrected.

28936. ERSHOFF, BENJAMIN H., 1914- , and H. B. McWILLIAMS. Effects of B vitamins and liver on growth of immature rats maintained at low temperatures. (Society for Experimental Biology and Medicine. Proceedings, Oct. 1950. v. 75, p. 226-29, 2 tables) 8 refs.

Contains a report on experiments which demonstrated a marked retardation of body and gonadal weight in male rats kept in a cold environment and fed a purified diet. Supplements of dried whole liver, of water-insoluble liver residue, of water-soluble liver extract, or of known B vitamins resulted in a marked increase in body and gonadal weight.

28937. ERSHOFF, BENJAMIN H., 1914- . Effects of prolonged exposure to cold on the thiamine requirement of the rat. (Archives of biochemistry, Sept. 1950. v. 28, no. 2, p. 299-304, table) 24 refs.

Contains a report on experiments with adult male rats, fed a purified thiamine (vitamin B₁)-deficient diet, and kept under cold room (2° C.) and room (23° C.) temperature conditions. Length of survival time was considerably decreased at lower temperature, averaging 27.6 days as against 64.7 days at room temperature.

28938. ERSHOFF, BENJAMIN H., 1914- . Effects of vitamin A malnutrition on resistance to stress. (Society for Experimental Biology and Medicine. Proceedings, Apr. 1952. v. 79, no. 4, p. 580-84, fig., 2 tables) 12 refs.

Contains an account of experiments with male rats fed a vitamin deficient diet, and their resistance to cold (2° C.) or to x-rays. The average survival time of the depleted rats at low temperature was 1.9 days as against 19.3 days at 23° C.; survival at low temperature was significantly increased by a daily intake of 2.5 U. S. P. units of vitamin A and reached an optimum by an intake of about 5 U. S. P. units.

28939. ERSHOFF, BENJAMIN H., 1914- . Failure of growth hormone to promote a weight increment in immature rats under conditions of low environmental temperature. (Endocrinology, Jan. 1951. v. 48, p. 111-13, table)

Contains an account of experiments with animals receiving massive doses of a growth-promoting fraction of the anterior pituitary; these failed to counteract the growth retardation of young rats caused by low (about 2° C.) environmental temperature; the animals kept at low temperature did not gain weight, whilst controls kept at room temperature showed a weight increment.

Contains "a rather general review of the geographical evidence on historic and prehistoric climatic changes. The author reviews critically the evidence on recent climatic changes (data of Lysgaard), the methods for studying past climatic changes, namely: glacial variations, oceanic temperatures, currents and salinities, geomorphology, pedology and pollen analysis. Data are presented showing that the mean annual temperature is increasing in the arctic and subarctic zones but not in the Mediterranean region. The possible causes of climatic variations, namely: changes in solar radiation (variations in ultraviolet) and variations in atmospheric circulation are discussed."—*Meteorological abstracts and bibliography*, Feb. 1953. v. 4, no. 2, p. 174.

Title tr.: Artificial freezing of rivers.

In winter, the operation of hydroelectric and water-supply installations is sometimes hampered or stopped by ice sludge forming in over-cooled water in areas of the river not covered by ice. Such areas, "polyn'yas" are caused by fast currents mixing the cold surface water with warmer lower layers. Artificial freezing of the water surface of these polyn'yas is recommended and several methods tested by practice are described, among them, slowing the surface current by booms, ice-floes, etc.

28943. ESTREICHER, ZYGMUNT. La musique des Esquimaux-Caribous. Collection Gabus. (Société Neuchâteloise de Géographie. Bulletin, 1948. t. 54, fasc. 1, nouv. sér., no. 6, p. 1-53, text map, 13 musical examples) 36 refs. **Title tr.:** The music of the Caribou Eskimos. Gabus' collection.

A musicological and ethnological study, based on the literature, and (mainly) on material collected by Jean Gabus in 1938, in the Barren Grounds west of Hudson Bay; about a hundred disks were recorded and are preserved at Musée Ethnographiques à Neuchâtel. The first part deals with the Caribou Eskimos' music: their magic songs and more numerous dance songs. Their two types of dance melody, the refrain and structure of the stanza as a whole are investigated, and an analysis is given of selected examples. The second part of the study investigates Eskimo music in general from the ethnological point of view: four principle styles are characterized: those of the Caribou, Copper, Alaska and Greenland Eskimos. The rules of musical development, performance, and the main lines of the development of Eskimo music are discussed. The Caribou Eskimos, author states, may be considered as the last living bearers of Proto-Eskimo culture.

28944. ESTREICHER, ZYGMUNT. Zur Polyrhythmik in der Musik der Eskimos. (Schweizerische Musikzeitung, 1947. Jahrg. 87, p. 411-15, musical examples) 5 refs. **Title tr.:** On multiple rhythm in the music of the Eskimos.

Contains musical characterization of the poly-rhythmic dance songs of the Caribou Eskimos of the Hudson Bay region, based on recordings made by Jean Gabus. Description is given of the dance *piherk*, and the roles of the singers and drum beater are outlined. Three different rhythms are heard at the same time: those of the singing, the drumming and the exclamations of non-singing participants.

Copy seen: DLC.

28945. ÈTNOGRAFIČESKĪ SBORNIK. O karagassakh. (Ètnograficheskiĭ sbornik, 1858. vyp. 4, p. 1-18) **Title tr.:** On the Karagas.

Contains description of a tatarized Samoyedic tribe of 543 persons (in 1851), nomadizing in the taiga on the Oka, Ula, Biryusa and Kan Rivers (which rise in the Sayan Mts. and are part of the upper Yenisey system). Author sketches their physical appearance, language (150 words listed), tents, clothing (Russian influence noted), food (roots of *Lilium maritagon*, meat of reindeer and wild animals, fish); their rearing of children, marriage, health and hygiene; their shamanism and popular therapy (using as drugs: musk, castoreum which they

get from Soyots, and mineral waters); their occupations: sable and squirrel hunting, use of firearms and dogs, fishing, and (most important) reindeer-breeding; their calendar and songs; administrative organization of their five "ulus" i. e. "villages," taxes (one sable skin for each gun), yearly meetings on October 6 in Nizhne-Udinsk, family relations, religiosity and superstitions. The anonymous author states that he had had occasion to meet Karagas in various places and at different seasons of the year.

Copy seen: DLC.

28946. ÈTNOGRAFIČESKĪ SBORNIK. Samoiëdy mezenskie. (Ètnograficheskiĭ sbornik, 1858. vyp. 4, p. 19-82) **Title tr.:** The Samoyeds of Mezen'.

Contains an account of the country and people of the region between the arctic coast, the Northern Ural Mts. on the east, and the Kara and Mezen' Rivers (66° N. 44° E.) on the west. The first (physiographic) part describes the Kanin and Timan Peninsulas, and the tundra called "Bol'shaya Zemlya". Details are given on the rivers, lakes, and mountains, the vegetation, climate, population numbers, etc., and the localities where the Samoyeds nomadize are indicated. The second part (p. 39-82) is an ethnographic sketch of these people: names of the tribes, origin and meaning of the term "Samoyed," notes on their history since 1547, their payment of "āsak" (taxes) to the Russians from 1707 to 1818, and Christianization since 1784. Their former religion is treated in some detail: the gods and feasts, sacrifices, places of cult on Vaygach Island and Kanin Peninsula, their stone idols, moral code, and the role of shamans in their traditional life. The building of Christian churches, 19th-century administration (p. 72) and laws, the good-natured character of Samoyeds, etc., are described. **Copy seen:** DLC.

28947. EULLER, JOHN. The great North Pole lie. (Bluebook, Sept. 1953. v. 97, no. 5, p. 6-15, illus.)

Contains popular account of the controversy over Peary's 1909 polar expedition. Cook's claims are briefly discussed and dismissed, but the main emphasis is placed upon the research of Dr. J. Gordon Hayes (Arctic Bibliography No. 6801). Hayes' conclusions that Peary had not reached the Pole were based upon average sledging speed, Peary's physical condition, vagueness and inaccuracies in

Peary's published account and his refusal to make public his diaries, lack of reliable witnesses to the last stage of his march to the Pole, and his navigation methods, as well as facts brought out by the congressional investigating committee, opinions of some arctic authorities and geographical societies, and Hayes' view of Peary's own character. The present status of the "Peary myth" is discussed.

Title tr.: [Radio] transmission.

Contains a discussion of difficulties in radio transmission during the trip from France to West Greenland, during the overland journey from the coast to the Central Station on the inland ice, the period at this station, and the return journey. Instruments are briefly described, and the lines of radio communication which were established are listed, including those with Paris, the Central Station, other camps and sections of the expedition, with Iceland, and with aircraft relative to the dropping of supplies. The ease or difficulty of transmission is noted in each case. Equipment is briefly described and suggestions are made for research in communications.

Title tr.: Radio transmission.

Contains discussion of organization of radio communications in summer 1951 between the camps and traveling groups of the expedition on the Greenland inland ice, and between the expedition, Iceland, and France. Conditions during the trip from France to Greenland, and types and behavior of the equipment during the expedition are discussed. Appendices give more detailed notes on organization, frequencies, etc., with lists of equipment used by the scientific, seismic, and gravimetric groups. Dia-

grams show radio installations in the expedition's weasels.

28956. EVTEEV, O. A. Pervye russkie geodezisty na Tikhom okeane. Moskva, Gos. izd-vo geograf. lit-ry, 1950. 105 p., illus., tables, maps (1 fold.) 32 refs. **Title tr.:** The first Russian geodesists in the Pacific.

Ivan Mikhailovich Evreinov and Fedor Fedorovich Luzhin, on completion of studies at the Naval Academy, were briefed by Peter the Great in 1718 for a trip to chart around Kamchatka and the Kurils, also probably to verify rumours of deposits of precious metals on the Kurils. Early in 1719 they traveled from Petersburg via Tobol'sk, Yakutsk and Okhotsk to Kamchatka, made a trip and wintered on the peninsula, then sailed to the Kuril Islands. Discovering no mineral deposits, they returned to Tobol'sk, and (Evreinov alone) to Kazan' where he reported results to the Tsar in 1722. The studies at the Russian navigation school and Naval Academy, preparation and equipment of the expedition, travel conditions on land and sea, the sojourn in Kamchatka, the geodetic work and achievements, and the subsequent fate of the two geodesists are circumstantially reported, using chiefly unpublished materials. Evreinov's map of Siberia, Kamchatka and northern Kuril Islands is described and a reduced facsimile inserted between p. 80-81. Appendices give coordinates and distances determined by the expedition, also lists of rivers and populated places on Evreinov's map. Earlier Russian expeditions to Kamchatka and the Kurils are briefly sketched in introductory notes.

Contains a technical account of the results of the third year's work, 1950-1951. The 38-man party was led by Paul-Émile Victor and arrived in late May. Nine wintered in Greenland, the others leaving early in October. A general summary and roster of personnel of the expedition from its inception in 1948 is given by the leader (p. 7-21). The area worked was central Greenland between Disko Bay on the west coast and Scoresby Sund on the east coast. A central station was established on the inland ice at 70°54' N. 40°38' W. to study meteorological conditions. Maps show the area covered and the geologic, geodetic, and seismic traverses made. Following the summary, are the papers listed below, which appear in this Bibliography under their authors' names, viz.—

tables. (*Its:* Série scientifique no. 16) 6 refs. *Title tr.:* Expedition to Greenland 1951; preliminary reports.

Contains a technical account of the results of the fourth year's work, summer 1951, of this expedition organized by Paul-Émile Victor. The 32-man party (including the nine-man wintering party of 1950-1951), led by Gaston Rouillon, worked from late May until Sept. 26. A general summary of the expedition and roster of personnel is given by Rouillon (p. 1-34). The party was divided into two seismic, one gravimetric, and three scientific groups, with emphasis upon seismic and gravimetric studies. The area worked included the central and southern parts of the icecap, 63°-74° N. Geologic, seismic, gravimetric, sea and air traverses are shown on maps. Biographical notes (p. 39-44) are included on Alain Joset and Jens Jarl (seismic group) who were killed Aug. 4, and an account of the accident is given by the leader (p. 35-38). Then follow papers listed below, which appear in this Bibliography under their authors' names.

28967. FABER, KURT, 1883-1929. Weltwanderers letzte Fahrten und Abenteuer. Mit einem Anhang herausgegeben von Dr. Walther Faber. Stuttgart, Robert Lutz Nachfolger Otto Schramm, 1930. 332 p. port., map. Reprinted Stuttgart 1943 (304 p.) **Title tr.:** The last journeys and adventures of a globetrotter. With a supplement by Dr. Walther Faber.

A collection of brief accounts of visits to many parts of the world, including the Baltic countries, Korea, Manchuria, and Siberia. In 1929 the author traveled on foot and by canoe in northern Alberta and the Great Slave Lake region. His dead body was found near Hay River in Feb. 1930, by the R.C.M.P. whose report is given. Faber's last letters from Ft. Vermillion in Alberta are included.

Contains discussion of the voyages of Norsemen to Greenland and thence to Vinland in the 9th and 10th centuries.

Copy seen: DLC.

28969. FAHRIG, WALTER FREDERICK, 1926- Preliminary map Griffin Lake (west half), Quebec. Ottawa, 1951. Map sheet, 36 x 42 in. (Canada. Geological Survey. Paper 51-23)

Map (scale, 1 in: 1/2 mi) with detailed marginal notes covers an area in northern Quebec about 40 miles northeast of Burnt Creek, on the eastern border of the Labrador trough between 55°-55°15' N. and 65°40'-66° W. Glacial drift, mainly outwash, covers the eastern border and south-central section. The Precambrian bedrock formations form two structural units, sedimentary schists on the east and folded intrusive and extrusive rocks on the west. The formations are discussed in turn. No important mineral occurrences are known in the region. **Copy seen:** DGS.

28970. FAÏNSHTEÏN, N. Mednonikelevye rudy Monche-tundry. (Razvedka nedr, 1933, no. 5-6, p. 16-17) **Title tr.:** Copper nickel ores of the Monche Tundras.

Contains a general description of the Nyuduyvench ore deposit. Its body consisting of schlieren enriched with nickel, iron and copper sulfides, has an area of 157,000 sq. m. with a lower edge at 50 m. depth. Its resources were computed in 1932 at 2,250,000 tons. There are some less important deposits in the same area. **Copy seen:** DLC.

28971. FAÏNSHTEÏN, N. Sul'fidy Kol'skogo poluostrova. (Razvedka nedr, Sept. 1932. no. 17, p. 6-7) **Title tr.:** Sulfides of the Kola Peninsula.

Contains note of the ore prospecting work in 1929-1930 of A. E. Fersman, who found sulfides in the central part of the Kola Peninsula. Later "Leningradskii geologo-razvedochnii trest" found sulfide ores in the Monche Tundras. Ore analyses show considerable copper, nickel and precious metal content. The Monche Tundras complex expedition thoroughly explored the Monche and Voleh'ya tundras. Geology, topography, geophysics and stratification of mineral deposits are briefly described.

28972. FAIRLIE, JOHN F. The significance of recent Canadian oil developments. (Journal of petroleum technology, Nov. 1950. sec. 1, p. 9-12, 4 figs., map; sec. 2, p. 8)

Refers briefly to the producing Norman Wells oil-field, whose outlet is confined to a small refinery which supplies local needs. It is the field which supplied the Canol project. Map on p. 10 shows extension of Western Canada oil-bearing basin from Alberta and British Columbia northwards through Northwest Territories to the Arctic Ocean.

Abstract is given in World Oil, Jan. 1951, v. 132, p. 207-210, illus., incl. figs., map, where it is stated that the original was a speech by the author at a meeting of the Petroleum Branch A.I.M.E., at New Orleans, Oct. 4, 1950.

28973. FALKENBERG, JOHANNES, 1911- . The Lapps. 29 p. (Encyclopedia Arctica (in preparation), v. 8, paper 12) 39 refs. Translated by Karin Fennow.

Contains description of the territory inhabited by Lapps in Scandinavia and Russia, its climate, vegetation, and animal life. The number of Lapps, their language (seven dialectic groups), and racial characteristics are given. The Lapp economy is described and details on hunting, fishing, reindeer-herding and cattle-keeping given. Some objects of material culture, e. g., the reindeer sledges, tents and interior, clothing, utensils and implements are treated. Finally the family and social organization (*siida*), and the former heathen religion are sketched.

travm. (Khirurgiia, 1945, no. 1, p. 29-32) **Title tr.:** Experimental basis for methods of irradiation therapy of injuries.

Contains an account on the effects of various kinds and modifications of light, especially ultra-violet light, on wounds and frostbitten areas. The advantages of cellophane filters; the effects of blue filters; of ointments, dyes and Rivanol applied simultaneously to the wounds; of the distance and time of exposure, are investigated and discussed.

28975. FARNER, DONALD S., and others. The roles of darkness and light in the photo-periodic response of the testes of white-crowned sparrows. (Biological bulletin, Dec. 1953. v. 105, no. 3, p. 434-40, tables) 35 refs. **Other authors:** L. R. Mewaldt and Stanley D. Irving.

Contains an account of experiments with the aim to ascertain the nature of response to interrupted photoperiods of several patterns. The results suggest that the light-stimulated process responds quickly at the beginning of a period of light and soon produces an amount of an essential substance sufficient to allow a persistent gonadotrophic effect after the cessation of light ("carry-over period"). An assumption of an active or essential role of darkness is not necessary in view of the information available.

28977. FAUNA SSSR. Leningrad - Moskva. Izd-vo Akad. nauk SSSR., 1911-53, in progress. Title tr.: The fauna of the U.S.S.R.

This basic work is published by the Zoological Institute of the Academy of Sciences of the U.S.S.R. under direction of the Institute's Director, at its inception N. V. Nasonov, subsequently S. A. Zernov, and at the present time, E. N. Pavlovskii. It is based chiefly on the collections of the Zoological Institute. Each volume is prepared by a specialist (rather than a group of such, as in *Flora SSSR*) and the work proceeds slowly. Its style and scope have undergone several changes during the 40 years of its publication. Some authors have treated only the Russian material, others have included freely the species from adjoining countries. Some volumes present only systematic treatment of investigated fauna, others include extensive data on the ecology and economic importance of the material; bibliographies vary in the different volumes from 10-15 to 4,500 references. *Fauna SSSR* is the most important of all zoological publications on the U.S.S.R., and includes extensive material on the fauna of its northern regions and those of adjoining countries. Of some 65 volumes so far examined, those listed below deal more or less with northern fauna and are analyzed in this Bibliography under their authors' names. A few (not listed) deal exclusively with fauna of southerly regions. Forthcoming volumes will be listed in later volumes of *Arctic Bibliography*.

Amphibia.

28978. FAUSEL, EVERETT GODFREY, 1901-, and **J. A. HEMPHILL.** Study of the late symptoms of immersion foot. (Surgery, gynecology and obstetrics, Nov. 1945. v. 81, no. 5, p. 500-503) 4 refs.

Contains a study of 65 patients, 14 months after cold immersion. Includes information on previous medical history, experience during the time of immersion, subsequent treatment, and current symptoms and findings. The latter are attributed to fibrosis, secondary to the initial inflammation after immersion rather than to secondary angiospasm. Abstract by R. L. Richards in *Bulletin of war medicine*, Mar. 1946. v. 6, no. 7, p. 307-308. **Copy seen:** DLC.

28979. FAUVEL, PIERRE LOUIS ANDRÉ, 1866-. *Annélides polychètes du Groënland*, recueillies par M. A. Bauer en 1949. (Association philomathique d'Alsace et de Lorraine. Bulletin, 1952. t. 9, fasc. 2, p. 102-106) **Title tr.:** Polychaete annelids of Greenland collected by Mr. A. Bauer in 1949.

Contains descriptions of nine species of bristle worms collected mainly at Port Victor, West Greenland, in the 1949 mission of *Expéditions polaires françaises*. One of the species, *Cistendes granulata* represents an arctic form; the others are of a wide distribution. **Copy seen:** CaMAI.

28980. FAY, TEMPLE, 1895-, and **G. W. SMITH.** Observations on reflex responses during prolonged periods of human refrigeration. (Archives of neurology and psychiatry, Feb. 1941. v. 45, p. 215-22, illus., 2 tables) 5 refs.

Contains a neurological study of 42 patients made hypothermic a total of 83 times, with rectal temperatures reduced to 80° F. and below. Reflexes, nervous and mental responses were tested at various decreasing temperatures, and

their changes and disappearance (if any) studied. A corresponding method was adopted when returning the patients to normal temperature, and the possible aftereffects, memories, etc., of the hypothermic state investigated. About 400 neurologic examinations were made in this series. **Copy seen:** DLC.

28981. FEDORCHENKO, T. P. K voprosu o kartakh plavanii I. L. Golikova i G. I. Shelikhova k tikhookeanskim beregam Severnoi Ameriki v 1783-1786. (Voprosy geografii, Sbornik 22, 1950, Kartografiia, p. 181-85, fold. map) **Title tr.:** On maps of the I. L. Golikov and G. I. Shelikhov voyage to the Pacific coasts of North America in 1783-1786.

Contains reproduction and description of a hitherto unknown map, published in 1787 and found by the author in a provincial town in the U.S.S.R. It was based on then available geographical information and on the original map, now lost, attached to the report of the Golikov and Shelikhov voyage 1783-86. On it, the northeastern coasts of Asia, Alaskan coast, Aleutian Islands, as well as the boundaries of the Russian possessions in America, are roughly delineated. **Copy seen:** DLC.

28982. FEDOROV, BORIS GAVRILOVICH. Sravnitel'nyi ocherk litorali Solovetskikh ostrovov Belogo moria. (*In:* Vserossiiskii s'ezd zoologov, anatomov i gistologov, 3, Leningrad, 1927. Trudy, 1928. p. 385-87) **Title tr.:** A comparative sketch of the littoral fauna of the Solovetskiye Islands in the White Sea.

Contains an ecological study of this littoral fauna which consists of two principal biocoenoses: that of the sand (*Arenicola marina*—*Mya arenaria*) and a complex biocoenose of rocks (*Balanus balanoides*, *Actinia equina*, fucoids, etc.). Notes are given on various species. **Copy seen:** MH-Z.

28983. FEDOROV, D. N., and A. S. KOROVIN. Lechenie ognestrel'nykh ranenii i otmorozhenii v usloviakh evakogospitala mavezymi poviazkami. (Arkhiiv biologicheskikh nauk, 1941. t. 62, vyp. 1, p. 28-33, table) **Title tr.:** Treatment of gunshot wounds and frostbite in evacuation hospitals with ointment dressings.

Contains a report on treatment with the Vishnevskii method, including 24 cases of frostbite. Degree and location of

cold injuries; combined treatment with novocaine block; course and results of therapy are discussed. *Copy seen:* DSG.

28984. FEDOROV, G. G. Opisaniye èkspeditsii po Obi lètom 1895 goda. (Leningrad. Voenno-meditsinskaya akademiya. Antropologicheskoye obshchestvo. Trudy, 1894-95, pub. 1897. t. 2, p. 299-327) *Title tr.:* Description of an expedition to the Ob' River in summer of 1895.

Contains account of a trip made by four students of the Military-Medical Academy in Petersburg to the Ostyak country for the purpose of collecting ethnographical, anthropological and zoological material. The party traveled from Petersburg by train and boat via Tyumen and Samarkov, to Berezov May 5-31, 1895. There they stayed for some weeks, making several small trips in the region; they studied Ostyak anthropology and made excavations, looking for skulls. *Copy seen:* DLC.

28985. FEDOROV, L. F. Solovki. Kronshtadt, 1889. 344, iii p., 10 fold. tables, fold. map. (Russkoye geograficheskoye obshchestvo. Otdeleniye ètnografii. Zapiski, t. 19, vyp. 1)

Contains a monographic study of Solovki or Solovetskiy Island in the White Sea, noted for its monastery and as a place of pilgrimage. Its climate is sketched, with tables of daily air temperature and wind direction and force for several months each year through the period 1829-1855. Brief survey is given of the island's natural conditions: physiography, wildlife, etc., and composition of the population. The famous monastery, and the "bogomol'sky", its religious community, are described in detail: their dwellings, habit, food, and activities. The island's economy, trade and education, and the monks' important contribution to them are discussed, particularly the "pilgrim trade". Map is ground plan of the island, and (in some detail) the monastery. *Copy seen:* DLC.

28986. FEDOROV, L. T. Issledovaniya i raschet maksimal'nykh raskhodov snegovykh polovodil rek Evropeyskoy chasti SSSR. (Problemy regulirovaniya rechnogo stoka, 1952. vyp. 5, p. 140-238, 29

illus., tables, graphs, maps, diagrs.) 46 refs.

Title tr.: Investigations and calculations of the maximum run-off during spring floods on rivers in the European part of U.S.S.R.

"The amount of water accumulated by snow during the winter, the intensity of spring snow-melting, and the state of the soil during the melt period are principal factors determining the flood run-off. The amount of water in the snow cover is a function of the depth and density of the snow cover, infiltration into the soil, and evaporation from the snow surface. Water also evaporated from saturated soil surfaces during snow melting. Deep frost penetration and intensive snow-melting increase run-off. Convective heat exchange between the snow and the air is the important factor in melting processes. Formulas and graphs are presented to indicate numerical interrelations applicable for run-off calculations."—SIPRE. Tabulated data from 400 stations are appended (p. 212-34). Rivers of the Kara (Tobol tributaries), Barents, White Sea drainage basins are included. *Copy seen:* DLC.

28987. FEDOROV, V. V. Rogovaya rukofat' kremenvego orudiya iz Mezinskoy paleoliticheskoy stovani. (Akademiya nauk SSSR. Institut ètnografii. Trudy, novaya seriya, 1947, t. 1, p. 135-38, 2 illus.) *Title tr.:* The horn handle for a stone implement from the paleolithic site at Mezen'.

Contains description of an artifact of northern reindeer horn in the Museum of Anthropology and Ethnography in Leningrad. The object obviously served a practical purpose, it is not ornamented although it bears evidence of having been made by human hand. Another similar object was found in the paleolithic site "Mal'ta" near Irkutsk, which contains a stone blade inserted in the hole end of the piece of horn. *Copy seen:* DLC.

Izvestiya, Nov.-Dec. 1951. t. 83, no. 6, p. 635-40, 2 sketch maps, fold. plate, table) 6 refs. *Title tr.:* Paleobotanical investigation of fossil

peat deposits of the sub-arctic Ural.

Contains results of pollen analysis of samples collected by L. D. Dolgushin in two denudations of fossil peat layers on the banks of the Man'ya River, a tributary of the Lyapin. Statistical data (absolute and percent) on pollen and spores of various plant species are given; and the vegetation, contemporary with the peat development, is characterized. These data are compared with results of similar tests in the Pechora, Vorkuta, Novyy Port and Salekhard regions and in the eastern parts of the Middle Ural. It is concluded that the climate in the Northern Ural at the time this peat was formed on the Man'ya was not more severe than that of the upper Pechora River basin in the post-glacial period of maximal temperature. The occurrence of three percent of oak pollen in this peat shows a northward extension of broad-leaved species in that period.

28996. FENNELL, EARLE J. The Topographic Division of the U. S. Geological Survey. (In: Alaskan Science Conference, 3d. Alaska mapping programs and needs, a symposium. pub. in Surveying and mapping, Apr.-June 1953. v. 13, no. 2, p. 203-206, text map)

Contains a brief summary of mapping operations prior to World War II, during which about half the Territory was mapped in disconnected areas at various scales, and account of the Division's present program carried out in cooperation with military agencies. A provisional map series at 1:250,000 will cover Alaska by early 1953. The general program includes "(1) completion of an up-to-date series of 1:250,000 scale maps; and (2) completion of the mile-to-the-inch maps in the most vital areas." Field methods are briefly described. Aerial photography is being done by the U.S. Air Force and Navy. Map shows Alaska areas covered by U.S. Geological Survey topographic 1:250,000 and 1:63,360 scale maps.

28997. FENYVESSY, LADISLAUS von. Die rassengeschichtliche Grundlagen des Ursprungs der uralaltaischen Völker. (Erdball, 1929. Jahrg. 3, no. 12, p. 444-50) 5 refs. **Title tr.:** The racial-historical backgrounds of the origin of the Ural-Altaic peoples.

Contains discussion of the frequently confused conceptions of the racial and linguistic division of peoples. The Ural-Altaic peoples are racially and linguistically a mixed group. Finno-Ugrians and Samoyeds belong to the Uralic linguistic family; racially they are substantially Europoids. The Altaic branch speak Turcic-Mongolic-Manchurian languages, and racially they are overwhelmingly Mongoloids. There is also a mixed racial

zone between the two. All the Ural-Altaic peoples, it is concluded, were originally of Mongolian race, and their Finno-Ugric branch later became greatly influenced by the European races.

28999. FERGUSON, IRENE DAVIS, 1898- , and N. LEVINSON. Responses to temperature in the isolated rabbit ear. (Journal of physiology, 1952. v. 118, p. 59P-60P) 3 refs.

Contains a report on experiments with the temperature of the perfusion fluid and/or of the ear unaltered, lowered, or raised. The results suggest conditions in the isolated ear resembling those in the intact ear.

Copy seen: DSG.

29000. FERGUSON, IRENE DAVIS, 1898- , and N. LEVINSON. Vascular responses in the isolated ear of the rabbit. (Journal of physiology, 1952. v. 119, p. 14P) 2 refs.

In isolated ears of rabbits, a decrease of temperature of the perfusion fluid (from 38° to 16° C.) causes a more rapid rate of inflow and decreased rate of edema formation. It is suggested that this is due to an alteration in the vascular system, the fluid being possibly diverted from capillaries to vessels of larger caliber.

Copy seen: DSG.

29001. FERGUSON, IRENE DAVIS, 1898- , and N. LEVINSON. Vascular responses to temperature in the denervated isolated rabbit ear. (Journal of physiology, 1953. v. 122, p. 35P-36P), 3 refs.

Contains an account of experiments with ears deprived of nerves to the blood vessels. With the perfusion fluid at 16° C. or 38° C., there was little difference, after initial fluctuation, in the rates of inflow, and rapid change of temperature

of the fluid brought about delayed and weak inflow responses. These and other changes indicate a diminished response of the larger blood vessels to temperature changes and increased capillary permeability.

29003. FERNALD, MERRITT LYNDON, 1873-1950. Persistence of plants in unglaciated areas of boreal America. (American Academy of Arts and Sciences, Boston. Memoirs, 1925. n. s., v. 15, no. 3, p. 237-342, 7 tables, 73 maps)

The occurrence of Cordilleran, Alaskan, Siberian, and Arctic Archipelago species, and more than 80 endemic species, on summits of the Torngats of Labrador, Shickshocks of Gaspé, and Long Range of Newfoundland cannot be satisfactorily explained in terms of recent dispersal or migration. It is believed that these sections and the Arctic Archipelago were unglaciated during the Pleistocene, the plants being survivors of a pre-Pleistocene flora. In this classic study, the author considers in turn Cordilleran and western arctic species in eastern North America, various possibilities of dispersal and migration of plants, glaciation of various sections including the Torngats, occurrence of plants in proximity to glaciers, zoological evidence, possibility of dispersal prior to Wisconsin glaciation, and the relation of the distribution of American and European arctic floras.

Many maps show distribution of species in North America, Greenland, and arctic Europe and Asia. **Copy seen:** DLC.

29019. FINDEISEN, HANS. Iz poezdki k keto (Enisejskim ostjakam) v 1927-28 g. g. (Sovetskaja Azia, 1929. god 5, no. 2, p. 126-31) **Title tr.:** From a journey to the Kets (Yenisey-Ostyaks) in 1927-28.

Contains review of earlier theories on the origin and language of Yeniseians, and author's own observations made among the Ostyaks and Yeniseians: their hunting trade (mostly for squirrels), superstitions and bear cult, social organization (a council of elders representing each clan), religious beliefs and shamanism, historical legends on wars with Yuraks and Tungus, etc. The author was sent to study Yeniseians and Tungus by the Museum für Völkerkunde in Berlin and his sojourn among them lasted for 18 months.

29020. FINDEISEN, HANS. Kinderleben bei einem sibirischen Polarkolk. (Erdball, 1926. Jahrg. 1, no. 3, p. 100-108, 4 illus. on plates 21-23) **Title tr.:** Life of children among a Siberian polar people.

Contains an account of the care of children and their education among the Yakuts, based on W. Sieroszewski's work *Äakuty*, 1896 (see *Arctic Bibliography*, No. 27192). **Copy seen:** DSG.

29021. FINDEISEN, HANS. Neue Untersuchungen und Materialien zum Problem der westsibirischen Altasiaten sowie über den Ursprung der Altasiaten überhaupt. (Zeitschrift für Ethnologie, 1927, pub. 1929. Jahrg. 59, Heft 3-6, p. 281-90) **Title tr.:** New investigations and materials on the problem of the Old-Asiatics of western Siberia, also on the origin of the Old-Asiatics generally.

Contains critical remarks on V. Bogoraz's theory of the ethnic origin of Yeniseians, their language and culture, as expressed in his article *Kastren-issledovatel' paleoaziatov in Pamäti M. A. Kastrena*, 1927 (*Arctic Bibliography*, No. 21135). Writing in Podkamennaya Tunguska in 1927 during his ethnographical expedition to the Yeniseians, Findeisen examines several theories on the origin of Paleo-Siberians and particularly the Yeniseians, adding some of his own impressions, from his stay among the southern section of this people, called the Tunguska Kets. Details are given on their two racial types, their economy (fishing, reindeer breeding, forms of sledges, etc.), folk poetry and tales.

Copy seen: DSG.

29022. FINDEISEN, HANS. Die nordasiatische Kunstkreise. (Anthropologische Gesellschaft in Wien. Mitteilungen, 1933. Bd. 63, p. 355-67) **Title tr.:** The northern Asiatic art cycles.

Contains comparison of two systems of classification of northern Siberian art: that of the author's *Die Kunstkreise Nordasiens* 1930 (*Arctic Bibliography*, No. 4968), and that of E. Schneider, *Izobrazitel'noe iskusstvo tuzemnykh plemen Sibiri*, 1931, q. v. The two systems worked out independently, have many points in common. The discussion deals with characteristics of the art of (among others) Lapps, Samoyeds, Ostyaks, Voguls, Yeniseians, Ostyak-Samoyeds, Tungus, Dolgans, Koryaks, Chukchis, Kamchadals, Eskimos, Gilyaks, Lamuts, Aleuts, Yukaghirs, and Yakuts.

29023. FINDEISEN, HANS. Schamanentum in Nordsibirien. (Erdball, 1929. Jahrg. 3, no. 9, p. 338-41, 3 illus. on

plate 75) *Title tr.*: Shamanism in northern Siberia.

Contains an account of Yeniseian shamans from author's inquiries in the field: he noted down several tales, songs and incantations from a famous shaman in the region of Podkamennaya Tunguska in 1927. The shaman's vocation and training, his costume and drum, and a shamanistic ceremony are described. Conceptions on man's soul (*ulvei*) and beliefs on *Hosedam*, a goddess of the nether world, are explained.

Copy seen: DSG.

29024. FINDEISEN, HANS. Viehzüchter- und Jägervölker am Baikalsee, im Flussgebiet der Bureja und im Amurlande. Auf Grundlage der photographischen Aufnahmen des russischen Ethnographen Pjotr Schimkiewitsch (†) aus dem Besitz des Berliner Museums für Völkerkunde dargestellt. (Baessler-Archiv, 1930. Bd. 14, Heft 1, p. 1-29, 15 illus.) 12 refs. *Title tr.*: The animal-breeding and hunting peoples in the Lake Baykal region, in the basin of the Bureya River, and in the land of Amur. A presentation based on photographs made by the Russian ethnographer Pëtr Shimkievich (deceased) whose material is in possession of the Museum for Ethnology in Berlin.

Contains ethnographical description of Buryats, Yakuts, and several branches of Tungus, incl. reindeer Tungus. It is compiled from various sources: Shimkievich's photographs (about 90) made in 1893-96, and his description of his travels (see under *Globus: Schimkiewitschs Reisen*); the work of Patkanov (see *Arctic Bibliography*, No. 13159), and Findeisen's own observations made on his Siberian travels in 1927-28. The burial rites of the Tungus of the Podkamennaya (Stony) Tunguska were described in 1927-28 by L. I. Geinen and his notes handed over to Findeisen (published on p. 18). The chapter on the Yakuts (p. 9-13) describes their economic life and profitable trading with Tungus, the rearing of Yakut children; and surveys Yakut religion on the basis of Ionov's work (see *Arctic Bibliography*, No. 22831). The spiritual and material culture of the numerous Tungusian branches and tribes is described. The most primitive and least Russified are the reindeer Tungus of the Siberian taiga, the author's own observations among the reindeer Tungus of the Turukhansk region in 1927-28 being cited.

Copy seen: DLC.

29025. FINDEISEN, HANS. Zur Kenntnis der religiösen Gebräuche bei den Sarten, Beltiren und Jakuten. (Zeitschrift für Ethnologie, 1925, pub. 1926. Jahrg. 57, Heft 3-6, p. 257-71) *Title tr.*: Contribution to the knowledge of the religious customs among the Sarts, Beltirs, and Yakuts.

Contains a lecture based on the new Russian publications on the ethnography of central and northern Asia. The contributions of German scholars of the past (G. F. Müller, J. G. Gmelin, G. W. Steller, P. S. Pallas, J. G. Georgi, and others) are stressed. The Yakuts are the only arctic cattle- and horse-breeding people. The vocabulary of their language consists of 32.5 percent Turcic, 25.9 percent Mongolic, and 41.6 percent elements of undetermined origin. The Yakut vocabulary may be said to be one-third Turcic, one-third Mongolian, the last third consisting of Tungusian, Samoyed-ian, Yeniseian and Yukaghirian components. The Yakut religion is characterized according to a paper of V. V. Ionov (see *Arctic Bibliography*, No. 22831).

Copy seen: DLC.

29026. FINDLAY, MARJORIE C. Greenland in the modern world. (Listener, Jan. 22, Apr. 9, 1953. [3] p., 31 illus.)

Contains a popular sketch for a radio audience, of changed economic and social conditions after World War II: Greenland's lack of economic self-sufficiency, the Danes' abandonment of a "closed country" policy and the beginnings of modernization of the life of some 24,000 Greenlanders. An extensive building program is noted, the Eskimos' abandonment of sealing for codfishing as a livelihood, establishment of the main institutions of a modern democracy, and possibility of a change from colonial status to that of a Danish Amt signalize the trend. The increasing importance of Greenland in intercontinental air communication, her strategic position, American defense activities there, etc., are briefly indicated. The author visited Greenland in July 1952 to study the sheep farming, under Arctic Institute of North America sponsorship.

Copy seen: CaMAI (reprint).

29027. FINDLAY, MARJORIE C. Impressions in Greenland. (Contemporary review, July 1953. No. 1051, p. 32-36)

Contains a discussion of modern sheep farming in southwest Greenland in relation to the farming activities of Norse

settlers of the Middle Ages in that area. Thirty Greenlandic families, formerly sealers, are full-time farmers on these ancient farm sites; some 200 other Greenlanders carry on part-time farming. Two sheep-breeding stations set up by the Greenland Administration in Godthaab and Julianehaab Distrikts, and a Sheep Breeder's Association, run by the farmers on the European pattern, mark a developing husbandry. The farmers' standard of living is higher than that of the average Greenlanders. **Copy seen:** DLC.

29028. FINDLAY, MARJORIE C. Miss M. C. Findlay's investigation of sheep farming in West Greenland, 1951. (Polar record, July 1952, v. 6, no. 44, p. 528-29)

Contains brief note on an investigation of the problems in the adoption of sheep farming by Greenlandic fishers and hunters. Work was carried out July-Aug. 1950 [sic]. Places visited are listed.

Copy seen: DLC.

29029. FINDLAY, MARJORIE C. Sheep farming in Greenland. (Arctic, July 1953, v. 6, no. 2, p. 166-67)

Contains note on modern sheep farming carried on by 30 full-time and 250 part-time farmers in southwest Greenland. History of the project is outlined and a Greenlandic farm described.

Copy seen: CaMAI; DLC.

29030. FINN, DONOVAN BARTLEY, 1900-. International Commission for the Northwest Atlantic Fisheries. (FAO fisheries bulletin, Jan./Feb.-Mar./Apr. 1951, v. 4, no. 1-2, p. 36-39)

Contains the results of the first meeting of the Commission, Washington, D. C., Apr. 2-10, 1951. The Commission "provides machinery for international coordination of scientific investigation and conservation of the fisheries resources of the waters off the West Coast of Greenland, the East Coast of Canada and the New England States of the United States of America. Its work is concerned with fish of the cod group, the flatfish, and the rosefish or *Sebastes*." Organiza-

tion and objectives of the Commission are discussed and texts of resolutions adopted are given. **Copy seen:** DLC.

29031. FINNILÄ, CARL. Längs Utsjoki och Kevujoki dalfören: några minnen och iakttagelser från en ornitologisk resa. (Terra, 1917, v. 29, p. 78-90, illus.) **Title tr.:** Along the Utsjoki and Kevujoki River valleys; reminiscences and observations from an ornithological trip.

Excursions were made in the summer of 1915 from Utsjoki (69°50' N. 27° E.) up the Utsjoki and Kevujoki Rivers in order to study the vegetation and bird life of northern Lappi. The northernmost pine forest of Finland in the Kevujoki valley was visited. The vascular plants encountered along the middle course of the Kevujoki and elsewhere are listed, and the date when they were first seen in bloom is given. Along the shores of Vuogojäyri, a mountain lake southeast of Njaggäljäläyri, 35 bird species were observed; a willow warbler (*Phylloscopus borealis*), only once before seen in Finnish Lapland, was noted.

29032. FINNISCH-UGRISCHE FORSCHUNGEN. Angaben über die Zahl der Lappen und Finnen in Schweden. (Finnisch-ugrische Forschungen, 1906, Anzeiger, Bd. 6, no. 1-3, p. 55-56) **Title tr.:** Statements on the number of Lapps and Finns in Sweden.

According to official statistics, the total number of Lapps in 1905 was 5,962, of whom 2,932 were nomads owning 117,821 reindeer. According to the count by parish priests, there were 6,150 Lapps including five to six hundred cross-breeds. About 1,093 Lapps speak Finnish as well as Lappish and all others understand Swedish. The number of Finns in northern Sweden was 41,815, about half of whom understand Finnish only, the others speak also Swedish.

29033. FISCHER, H.-R. Die Bevölkerung Alaskas seit 1867. (Petermanns geographische Mitteilungen, 1953. Jahrg. 97, Heft 1, p. 55-56, 3 tables) *Title tr.*: The population of Alaska since 1867.

Contains a summary of the growth of population since the Alaska Purchase, and the concomitant economic development. Five periods of white man's colonization are distinguished and analyzed. Population movements in the white, permanent settlements, and occupations, are presented in tables.

Copy seen: DLC.

29034. FISCHER, WILLIAM AUGUSTINE, 1888- . Photogeologic studies of arctic Alaska and other areas. (*In*: U. S. Research and Development Board. Committee on Geophysics and Geography. Apr. 1953. Selected papers on photogeology and photointerpretation. p. 207-214, 4 text maps, mimeographed).

Photogeologic interpretations of 87,000 sq. mi. in northern Alaska, north of the Brooks Range, was begun in 1948 by the U. S. Geological Survey. Its purpose was to (1) map areas not studied in the field, (2) aid geologic and geophysical field parties and the U. S. Navy's oil exploration program, and (3) provide a regional geologic map of northern Alaska. Results are illustrated by a brief discussion of problems in the Square Lake area and Gubnik anticline.

(*In*: Congrès International des Sciences Anthropologiques et Ethnologiques. 2d, Copenhagen, 1938. Compte rendu, 1939. p. 131-32) *Title tr.*: The exhibition of

Eskimo skulls and the skulls of medieval Norse settlers in Greenland ("Greenlanders").

Contains investigation of some typical features of the Eskimo skulls: torus palatinus, torus alveolaris maxillae, and alveolaris mandibulae. The same "Eskimoie" features have been found also on the skulls of the Scandinavian settlers in Greenland, although in considerable lower percentage. The author suggests that similar features on skulls of two different races were caused by geographical factors and climate.

29038. FISHER, WALTER KENRICK, 1878- . Echiuroid worms of the North Pacific Ocean. (U.S. National Museum. Proceedings, 1946, pub. 1948. v. 96, no. 3198, p. 215-92, illus., plates 20-37) 86 refs.

Contains an introductory section on the anatomy, ecology and taxonomy of these worms, followed by keys and descriptions of forms collected in waters "north of a line drawn from Cape San Lucas, Baja California, to the southern end of Sakhalin." The description of individual forms includes detailed anatomy, occur-

rences and geographical distribution, ecology, etc. A new order, several new genera, species and subspecies as well as some forms of unknown taxonomic position are included. The types of all the new species are at the National Museum. About half of the forms occur in arctic areas. A supplement, *Additions to the echiroid fauna of the North Pacific Ocean* (U.S. National Museum. Proceedings, 1949, pub. 1952. v. 99, no. 3248, p. 479-97, plates 28-34; 16 refs.), deals with material not available earlier, collected on the coast of California and Washington.

Copy seen: DLC.

29039. FISHER, WALTER KENRICK, 1878- . New starfishes from the North Pacific. I, Phanerozonia; II, Spinulosa. (Zoologischer Anzeiger, 1910. Bd. 35, no. 18, p. 545-53; (II) p. 568-74)

Tables are given for the determination of the species of these two groups; 24 new species and subspecies are described, including nine native to Bering Sea, Aleutian waters and Gulf of Alaska.

29040. FISHMAN JACK, 1908- . Treatment of frostbite. Report of a case. (U.S. Armed Forces medical journal, June 1951. v. 2, no. 6, p. 957.

A woman, age 44, white, suffered 27 years earlier frostbite of the legs. Since then the scars showed almost continuous ulcerations and during cold weather the legs were painful, numb and stiff. Priscolline injections gave immediate and favorable response.

Copy seen: DSG.

29041. FITZGERALD, GERALD, 1898- . Mapping in the Arctic. (In: American Society of Photogrammetry. Panel on arctic mapping. pub. in Photogrammetric engineering, June 1953. v. 19, no. 3, p. 406-408)

Contains a short history of mapping, primarily in northern Alaska, from the early 19th century. The work of British explorers, American survey parties after 1867, the U. S. Geological Survey beginning in 1895, the International Boundary Survey 1909-1912, and others, is briefly noted. Mapping methods and transportation prior to the period of modern aircraft are described. A small scale map of northern Alaska and a series of inch-to-the-mile reconnaissance maps for Naval Petroleum Reserve No. 4 were completed as a result of Trimetrogon coverage of arctic Alaska during World War II. In the post-war period survey-

ing and mapping have been greatly expanded, and a provisional issue of a uniform 1:250,000 scale topographic series has been published. High-altitude Shoran-controlled mapping photography and improved radar altimetry for control points are needed for modern adequate mapping of northern Alaska.

29042. FLANNERY, REGINA, 1904- . The culture of the northeastern Indian hunters: a descriptive survey. (In: Johnson, F., ed. Man in northeastern North America, 1946. p. 263-71)

Contains a survey of the cultural characteristics of Algonkian-speaking tribes in Canada living east (roughly) from Hudson Bay-Lake Winnipeg, with major attention given to non-material culture. Traits common to the area as a whole are treated briefly, then, more fully, those distinctive of the northerly portion, forming an account of tribal life still functioning to a considerable extent, beyond the limits of white settlement. Social organization, hunting methods, divination and prediction of hunting luck, offerings, tabus, the "eat-all" feast, animal ceremonialism among the Montagnais-Naskapi, belief in "master" or "owner" of all animals, shamanism with its complex of guardian spirit, the trickster tales, etc., are characterized. Besides the literature, the author has drawn on notes of J. M. Cooper and her own field work.

Copy seen: DSI-M.

29043. FLANNERY, REGINA, 1904- . The position of woman among the eastern Cree. (Primitive man, Oct. 1935. v. 8, no. 4, p. 81-86)

Contains a sketch of the economic, socio-domestic, political and magico-religious status of women in the Cree culture of the James Bay region, as studied by the author during the summers of 1933 and 1935. Comparison is made with woman's status among Iroquois and others, and that of the Cree concluded to be fairly high.

Copy seen: DLC.

29044. FLANNERY, REGINA, 1904- . The shaking-tent rite among the Montagnais of James Bay. (Primitive man, 1939. v. 12, no. 1, p. 11-16)

Contains description of the rite as observed by the author at Rupert's House, on the east coast of James Bay in Aug. 1938. She touches upon the attitudes of the natives toward the rite, and discusses the broader aspects of the problem. The conjuror calls spirits, especially Mistabeo, the chief spirit of the rite, who answers questions of the conjurer and others, and fights with another spirit Memegwecio. The questions concern hunting, and Mistabeo's victory indicates good luck in hunting bears. The tent shakes violently when spirits are fighting. The shaking-tent rite extends among the Algonkians from Labrador to the Rockies. The rite is a shamanistic divination in the food quest.

Copy seen: DLC.

29045. FLANNERY, REGINA, 1904- . Some aspects of James Bay recreative culture. (Primitive man, Oct. 1936. v. 9, no. 4, p. 49-56)

Contains description of children's toys and adult games from the material gathered by the writer during the summers of 1933 and 1935 at Moose Factory, southern James Bay. Much of the recreative culture of the Cree of the west coast of the Bay, and Montagnais of the east coast remained intact. Among the Cree, the team games, strenuous competition, magico-religious elements in play, and gambling, are absent. Parents encourage their children in imitative play at an early age (paddling miniature canoes, shooting small bows and arrows, etc.) Adult games: the cup-and-pin game, women's double-ball game, girls' "fire game" and others are described.

Copy seen: DLC.

29048. FLETCHER, JOSEPH OTIS, 1920- , and L. S. KOENIG. Floating islands in the Arctic Ocean. Sept. 1, 1950. 30 p. illus. (375th Reconnaissance Squadron (VLR) Weather. Special report no. 3) 6 refs.

"Two floating ice islands, T2 and T3, were discovered with only a limited amount of search. They are wedge-shaped and their surface ice is corrugated, presenting a system of parallel troughs and ridges never observed on ordinary pack ice. The corrugations are probably due to mechanical stress during the process of formation. It is believed that other floating ice islands have been sighted and that mechanisms exist which could produce floes many miles across and a few hundred ft. thick impervious to crushing by sea-ice, 6-12 ft. thick."—SIPRE.

Copy seen: DN-HO.

29049. FLETCHER, JOSEPH OTIS, 1920- . Three months on an arctic ice island. (National geographic magazine, Apr. 1953. v. 103, p. 489-504, illus., map)

"T-3, a huge mass of ice which broke off an ice shelf on Ellesmere Island, has been drifting in the polar basin since 1946, traveling at about 2 mi./day. T-3 is a 150 ft. thick slab of fresh-water ice, 4 mi. wide and 9 mi. long. The first landing and the subsequent establishment of an air weather service and geophysical research base are described. Wind is the main cause of drifting. Temperatures and salinity were measured at various depths in the Arctic Ocean. Soundings revealed that the ocean bottom is generally flat, is located more than 12,000 ft. below the surface, and occasional mountains rise within 7000 ft. of the surface. The reciprocal effects of ice and air temperature are being studied. Weather information and broadcasts are made every six hours. Coring bits driven down 52 ft. disclosed 54 distinct dirt layers."—SIPRE.

Contains a study of cytological changes produced in the adrenal cortex by alteration in activity caused by various factors including cold. Reduction occurred in the following areas and time order: the peripheral and clear zones, the outer fascicular, and finally the inner fascicular and reticular zones. *Copy seen:* DSG.

29051. FLIGHT. Nine days on the ice cap. (Flight, London, Oct. 10, 1952. v. 62, no. 2281, p. 467-68, illus.)

Describes briefly the experiences of 12 men stranded for nine days on the Greenland icecap because of accident to airplane (the R.A.F. Hastings) while drop-

ping supplies to the British North Greenland Expedition. *Copy seen:* DLC.

29052. FLIGHT MAGAZINE. Ice patrol by copter. (Flight magazine, Sept. 1953. v. 40, no. 3, p. 22-23, illus.)

Brief account of three Bell 47 helicopters aboard the Canadian Dept. of Transport's two arctic ice-breakers C. D. Howe and d'Iberville on their arctic patrols. The vessels' accommodation for the copters and the latter's work as ship-to-shore taxi in ice scouting, air photography, survey and rescue work, etc. are noted. *Copy seen:* DLC.

29053. FLINT, GEORGE MARSH, Jr., 1918- , and E. H. COBB. Gypsum deposits near Iyoukeen Cave, Chichagof Island, southeastern Alaska. Washington, D. C., U. S. Govt. Print. Off., 1953. p. 27-37, 3 sketch maps. fold. map. (U. S. Geological Survey. Bulletin 989-B. Mineral resources of Alaska, 1951) 5 refs.

Contains brief descriptions of the history, development, mining, and geology of the deposits first developed 1902-1905. The Pacific Coast Gypsum Co. and Gypsum-Camel properties are described. Rocks are predominantly limestone, probably Carboniferous, and covered by Quaternary sediments. Formerly considered of sedimentary origin, the gypsum may have been deposited from solutions along a fault zone or zones. No valid estimate of reserves can be made. *Copy seen:* DGS.

29056. FLINT, RICHARD FOSTER, 1902- . Snow, ice and permafrost in military operations. Wilmette, Ill., Sept. 1953. 6 p. table, diagr. (U. S. Army. Corps of Engineers. Snow, Ice and Permafrost Research Establishment. Report 15)

"The background history, mission and operational features of SIPRE are outlined. Basic research, long-range plans, field studies, cooperation with other agencies, and expected results are discussed. Operational needs and research to meet the needs are indicated. SIPRE performs fundamental scientific research as well as applied engineering research since the fundamental properties of snow and ice have not been established by civilian research. Military problems created by cold climate are summarized."—SIPRE. **Copy seen:** CaMAI.

29057. FLOHN, HERMANN. Künstliche Beeinflussung von Wetter und Klima? (Geographische Rundschau, Feb. 1952. v. 4, no. 2, p. 47-52) 17 refs. **Title tr.:** Artificial influencing of weather and climate?

"This general article discusses the processes of rain formation and the possibility of causing it, the effect of great town fires during the war, atom bomb explosions, Russian hydrologic plans and effect of Gulf Stream. The possibility of large scale artificial changes of climate is minimized, though recent warming of Arctic may be partly due to CO₂ from coal burning. Artificial changes of local climate by towns, forests, etc., undoubtedly occur."—*Meteorological abstracts and bibliography*, Mar. 1953. v. 4, no. 3, p. 291.

29058. FLOHN, HERMANN. Mittlere Druck- und Strömungsverhältnisse in der Troposphäre: [I] Sommer; [II] Winter. (Deutscher Wetterdienst in der US-Zone, Grosswetterlagen Mitteleuropas, 1949. v. 2, p. 61-64, 105-107, charts) **Title tr.:** The mean pressure and air streams in the troposphere: pt. 1, summer; pt. 2, winter.

"One of the results of the author's intensive work in the meteorology and climatology of the free atmosphere. Mean charts are presented for a great part of the Northern Hemisphere (North America, Atlantic, Europe from 90° N. to 30-20° N., Asia and Pacific to 50-45° N.) showing the relative topography, temperatures and wind directions of the 500 mb surface. Other charts from 110° W. to 70° E. present the absolute topography, temperatures and wind directions for 700 mb and 225 mb. The values are arranged for three summer and three winter months. All available data are used. A discussion of the accuracy of the different kinds of ascents is given. The cold pole of the free atmosphere is found over the Baffin Island in summer and over northeast Siberia in winter, accompanied by a second cold pole over the Canadian Archipelago. The influence of the North American continent results in a cold trough over the eastern coast and a warm crest over the western coast, very well expressed in summer."—*Meteorological abstracts and bibliography*, Mar. 1953. v. 4, no. 3, p. 294. **Copy seen:** DWB.

29059. FLOR, FRITZ. Beitrag zu den Problemen der arktischen Kulturgliederung. (Anthropologische Gesellschaft in Wien. Mitteilungen, 1933, Bd. 63, p. 53-59) **Title tr.:** Contribution to the problems of arctic cultural differentiation.

Contains an attempt to find an explanation of how arctic peoples, originally hunters, came to knowledge of domestication of reindeer. Many references are made to the Paleo-Siberian peoples, Samoyeds and Tungus, among others.

Copy seen: DSI.

29060. FLOR, FRITZ. Haustiere und Hirtenkulturen; kulturgeschichtliche Entwicklungsumrisse. (Wiener Beiträge zur Kulturgeschichte und Linguistik, 1930. Bd. 1, p. 1-238) 226 refs. **Title tr.:** Domestic animals and nomadic cultures; sketches of cultural-historical development.

Contains a study on the origin of dog, reindeer- and horse-breeding based on

extensive literature research. Seven species or types of dog are described and their use particularly among northern peoples discussed. Reindeer-breeding is dealt with as it appears among the Zyryans, Ostyaks, Voguls, Koryaks, Chukchis, Yukaghirs, Yakuts, Tungus, Sayan Samoyeds, and Lapps (p. 86-145). Elk-breeding is briefly surveyed. Then follows an account of the horse and its use by various peoples, including (p. 229-31) the Yakuts. Conclusions: reindeer-breeding did not originate under the influence of horse-breeding which is of later date, rather it has something in common with dog-breeding; reindeer was first used as a draft animal with the sledge, and for slaughter, and only later as a carrier of burdens; the milking and riding of reindeer is of most recent date and originated perhaps under the influence of horse-breeding; reindeer sacrifices are older than horse sacrifices, however; use of the dog as a sledge animal is older than that of the reindeer; the earliest reindeer-breeders were the Yurak Samoyeds in the Sayan Mts., later followed by the Tungus, Ostyak-Samoyeds, western Koryaks, and Lapps.

29064. FORBES, ALEXANDER, 1882- Quest for a northern air route. Cambridge, Mass., Harvard Univ. Press, 1953. x, 141 p. 36 illus. on 8 plates, 8 maps, diagr.

Contains account of reconnaissance and mapping trips for the U. S. Navy to Labrador and Baffin Island in 1941-43. Sites were selected on Koksoak River near Chimo, at Koojesse Inlet in Frobisher Bay, and on the east Baffin coast, for bases (Crystal 1-3) along a route for ferrying aircraft from the United States to England. Construction of Crystal 2 and reconnaissance charting of Koojesse Inlet (1942), hydrographic surveys of the latter and Koksoak River, Labrador (1943) are discussed. Author's associates, particularly Capt. Bob Bartlett and Col. Charles Hubbard, construction of Goose Bay airport, bases on West Greenland, Eskimo activities, cartographic techniques, etc., are noted in this richly anecdotal account. Extensive photographic illus.

29065. FORBIN, VICTOR, 1864- L'expédition arctique canadienne. (Nature, Paris, Sept. 15, 1946. année 74, no. 3120, p. 280-82, illus.) *Title tr.:* The Canadian Arctic Expedition.

Expedition Muskox was planned to test equipment and investigate human survival in arctic barren lands. Its itinerary was Churchill on the west coast of Hudson Bay, across the Barren Ground to Cambridge Bay on Victoria Island, thence by Coppermine, Fort Norman to Edmonton. "Four-ton snowmobiles, ex-

erting a pressure of two lbs./sq. in. were mounted on 16-wheel bogie trucks for the 5000 km. journey through Alberta. Housing, clothing, nourishment, and physical effects of the cold are described. Information procured by the expedition included technical data on gasoline, oil, and food consumption."—SIPRE.

Copied seen: DLC.

29066. FORBIN, VICTOR, 1864—. Industrie et commerce chez les Esquimaux. (Nature, Paris, Feb. 13, 1926. année 54, no. 2706, p. 97-100, 7 illus.) *Title tr.*: Industry and trade among the Eskimos.

Contains exposition on aspects of Eskimo material culture stressing its ingenuity. Detailed description is given of how a snowhouse is built, soapstone lamps and pots made, sledges and boats constructed, and clothes tailored. Their pots and lamps as trading objects reach as far as Siberia.

Copied seen: DLC.

29067. FORBIN, VICTOR, 1864—. L'organisation sociale des esquimaux. (Nature, Paris, Jan. 30, 1926. année 54, no. 2704, p. 65-68, 7 illus.) *Title tr.*: Social organization of the Eskimos.

Contains notes on Eskimo family life and tribal organization, based on material collected in the Dolphin and Union Strait region of Northwest Territories by D. Jenness and K. Rasmussen: the chieftain has no prerogatives and power; hunting booty is divided with neighbors; there is fraternization by temporary exchange of wives, division of work and property between husband and wife, communal property (hunting ground, drum); stories of occasional cases of murder, etc., are related.

Copied seen: DLC.

29068. FORBIN, VICTOR, 1864—. Origine et caractéristiques des Esquimaux. (Nature, Paris, Jan. 2, 1926. année 54, no. 2700, p. 1-4, 6 illus.) *Title tr.*: Origin and characteristics of the Eskimos.

Contains anthropological speculation chiefly based on material collected by Diamond Jenness on the Canadian Arctic Expedition of 1913-1918, on the type of the present-day Eskimo. Three types of nose, late puberty, negroid traits at Nain in Labrador, the obvious admixture of Mongoloid and Indian blood are noted here. The Eskimos, who probably crossed the Bering Strait several thousand years earlier than the Indians, are an old race; it has several traits in common with

the European paleolithic race of Chancelade; the author inclines to believe that the Chancelade man traveled from the western Europe to the East, traversed Siberia and finally reached as far as Greenland.

Copied seen: DLC.

29069. FORBIN, VICTOR, 1864—. La psychologie d'un race primitive: les esquimaux. (Nature, Paris, May 1926. année 54, no. 2719, p. 305-308, 6 illus.) *Title tr.*: The psychology of a primitive race: the Eskimos.

Contains account based chiefly on material collected by D. Jenness during the Canadian Arctic Expedition of 1913-1918, of certain practices among Eskimos usually considered as crimes among civilized peoples: the killing of the newborn (before they get their names and souls), abandonment of the aged, sexual promiscuity. Eskimo respect for property (except that of white men); their apparent contradictions in mood and character, etc., are noted.

Contains a case presentation of a soldier whose hands were frozen while riding a motorcycle. Disappearance of edema, alleviation of pain and acceleration of healing are claimed for the treatment.

Copy seen: DSG.

29074. FORSTER, ROBERT ELDER, II, 1919- , and T. B. FERGUSON. Relationship between hypothalamic temperature and thermoregulatory effectors in unanesthetized cat. (*American journal of physiology*, May 1952. v. 169, no. 2, p. 255-69, illus., table) 17 refs.

In non-anesthetized cats exposed to ambient temperatures of 0° to 30° C., hypothalamic temperature showed irregular, small variations of up to 0.5° C. about a relatively constant mean, which was independent of environmental temperature and was an average of 0.1° C. lower than average rectal temperature. During anesthesia the small variations largely disappeared, and hypothalamic temperature slowly followed that of the environment. The effects of heating, relations to the vasomotor tone, and the problem of central- and reflex-control of thermoregulation are also discussed.

Copy seen: DSG.

FORSTER, ROBERT ELDER, II, 1919- , *see also* Bazett, H. C., and others. Temperature changes of blood flowing in man. 1948. No. 28019.

29075. FORTIER, CLAUDE, 1921- , and others. A comparative study of some of the chemical and morphological changes elicited in the adrenals by stress and purified ACTH. (*Endocrinology*, Jan. 1950. v. 46, no. 1, p. 21-29, tables) 24 refs. *Other authors:* Floyd R. Skelton, Paris Constantinides, Paola S. Timiras, Marc Herlant and Hans Selye.

Contains a report on experiments with rats submitted to stress, including cold combined with fasting. The animals of the latter group showed the highest degree of thymolysis and adrenal enlargement. Limited histological examination suggests that cold and fasting cause an intense discharge of sudanophilic substance from the adrenal cortex.

29076. FORTIER, YVES OSCAR, 1914- , and R. THORSTEINSSON. The Parry Islands folded belt in the Canadian Arctic Archipelago. (*American journal of science*, Apr. 1953. v. 251, no. 4, p. 259-67, illus., text map) 18 refs.

Contains summary and interpretation of work done since 1857 on Ellesmere and the northern group of Canadian Arctic Islands, and suggests problems to be solved. Main problems are the time of the orogeny of the Parry Islands folded belt and the relation of this belt to the folded strata on Ellesmere Island (which strata may constitute an extension of the Caledonian folding of northwest Europe, Spitsbergen and northwest Greenland). The geology and structure of Ellesmere Island are summarized, and short descriptions given of Bathurst, Melville Prince Patrick, Ellef Ringnes and Cornwallis Islands, and of Grinnell Peninsula on Devon Island. The Parry Islands folded belt may extend beneath the Beaufort Sea to the Tanana-Yukon region of Alaska. Aerial photographs have as yet shed no light on the relation of this belt to Ellesmere Island folds. "It is possible that, whereas Cornwallis

Island represents a southeastern branch of the Parry Islands folded belt, a northerly branch of the belt escapes detection on air photographs because it is hidden under younger strata on north-westernmost Devon Island and also in western Ellesmere . . . This would place the date of orogeny in those parts sometime in the Devonian . . . Map shows the position of the folded belt.

29077. FORTUNE. Thunder over the North Atlantic. New weather stations, improved forecasting techniques, and a squadron of men direct the planes through the winds, ice, and clouds of northern storms. (Fortune, Nov. 1944. v. 30, no. 5, p. 152-56, +, illus., maps, diag.)

History and operations of the Eighth Weather Squadron of the U. S. Army Air Force's Weather Wing with headquarters at Gander, Newfoundland are outlined. Its network of 46 stations, supplemented by over a hundred foreign civilian stations, in the Eighth Weather Region are described. This Region covered five countries and extended over the Eastern Canadian Arctic, Greenland, Labrador, and the North Atlantic. It supplied weather service for the activities of the Army Air Force in the North Atlantic and for the Northern Air Route from central Canada, and from Goose Bay, Labrador, via Baffin Island and Greenland to Prestwick, Scotland. A detailed description is given, with colored illus., of the method of preparing weather charts and weather forecasts for the flights.

29078. FOSS, MARIĀ EVGEN'EVNA. Drevnelshafā istoriā Severa Evropelskoi chasti SSSR. Moskva, Izd. Akademii nauk SSSR, 1952. 280 p., 121 illus., incl. text maps, plans, 3 fold. maps, col. plate, about 200 refs. (Institut istorii material'noi kul'tury. Materialy i issledovaniā po arkheologii SSSR, no. 29) **Title tr.:** The oldest history of the North European part of the U.S.S.R.

Contains a monograph on the neolithic, chiefly based on recent (Soviet period) archaeological investigations. An attempt is made to reconstruct from archeological finds, the social organization and ethnic origins of the peoples who inhabited northern European U.S.S.R. from about 4000 to 500 B. C., and it is concluded that the Finno-Ugric peoples, including Samoyeds, were among the first inhabitants. The analysis of ornaments is

considered as a clue to solve demographic problems.

In two parts, the work comprises (1) an historical sketch, and (2) description of neolithic finds. In pt. 1 the characteristics of the northern neolithic and history of its investigation is given; the ornaments are scrutinized, particularly for their significance to the investigation of kinship and ethnic origins; the ancient cultures of Kargopol' (60°-62° N.), the White Sea, Pechora and Karelia are discussed, and the earliest inhabitants, their ethnic origin, etc., sought.

Pt. 2 describes in detail the sites already discovered and investigated (as above), and finds made there. 615 sites of known inhabited places of the neolithic, bronze and early iron age (4000 to 1000 B. C.) in northern European Russia are listed (p. 253-70) with references to the literature on them. Rybachiy Peninsula (arctic paleolithic), northern and southern coasts of Kola Peninsula, Timanskaya and Bol'shezemel'skaya Tundras, Pechora basin, shores of the White Sea, and the lower Severnaya Dvina River, are represented as well as more southerly regions. The numerous illustrations, maps, plans, etc., are of high technical quality.

29079. FOSS, WILLIAM O. North Atlantic weather stations. (U. S. Naval Institute. Proceedings, Feb. 1950. v. 76, no. 2, p. 171-75, illus.)

Contains a general summary of the history and work of the North Atlantic weather ships. The first weather station was operated in 1936 when trans-Atlantic commercial airline flights began. The program was greatly expanded during the war, and in 1946 continued by an agreement among the member nations of International Civil Aviation Organization. Weather observation procedure is given, equipment described, and rescue services noted. Ten stations are listed with their location (in 35°-66° N. lat.), governments responsible, and number of vessels to be operated according to a three-year I.C.A.O. agreement of 1949.

Copy seen: DLC

29080. FOSTER, L. R. R. The "crow's nest" in polar vessels. (Polar record. Jan. 1953. v. 6, no. 45, p. 688-90, illus.)

Contains notes on the importance of the crow's nest in arctic navigation, its shortcomings in the modern sealer (small size, lack of compass, etc.); and suggestion of a larger "nest" capable of accommodat-

ing two persons, and, in addition to steering control and engine-room bell communication, a compass repeater, a telephone to wheel-house and engine room, etc. The crow's nest of the new Danish vessel *Kista Dan* is cited as an example of proper design. Author's remarks are preceded by an editorial note on precursors and early forms of the crow's nest. **Copy seen:** CaMAI; DLC.

29081. FOSTER, L. R. R. Small boats for use in ice. (Polar record, July 1952 v. 6, no. 44, p. 339-40, diagr.)

Contains suggestions and recommendations for construction and operation. Overall construction, sheathing, iron stem-band, engine type, shape of sides, protection of propellers (with diagr.) and "after end," as well as alternative steering and propulsion methods are described. A method of hauling up the boat upon the ice is outlined. **Copy seen:** DLC.

29082. FOSTER, L. R. R. Some recent work on polar navigation. (Institute of Navigation, London. Journal, Jan. 1952. v. 5, no. 1, p. 12-26, plate, 2 text maps, 3 tables)

Contains account of trip in the *Norsel* (Norwegian sealer) Nov. 1951-Feb. 1952, to relieve the Norwegian-British-Swedish Antarctic Expedition, and subsequent sealing off the coast of Newfoundland and southern Labrador, Mar. 1952. Construction of ships designed to work in ice, techniques of handling a ship in ice, navigation, and astronomical observations are discussed. An Appendix contains "Notes on the dip observations taken with the Pulfrich Instrument," by H. C. Freiesleben. **Copy seen:** DLC.

29083. FOTIADI, È. È. K voprosu stroeniâ dokembriïskogo skladchatogo osnovaniâ Russkoï platformy. (Akademiâ nauk SSSR. Doklady, 1947. novââ seriâ, t. 57, no. 8, p. 807-810, sketch map) **Title tr.:** On the problem of the structure of the Precambrian folded basement of the Russian platform.

"Discusses the structure of the pre-Cambrian folded basement of the Russian platform."—Geological Society of America. *Bibliography and index of geology*, 1950, v. 15, p. 95. The region studied includes the northern section of European U. S. S. R.: Arkhangel'sk province (including the Northern Ural) and the Kola Peninsula (sketch map, p. 808).

Copy seen: DLC; MH.

29084. FOWLER, EDMUND PRINCE, 1905-, and P. M. OSMUN. New bone growth due to cold water in the ears. (Archives of otolaryngology, Oct. 1942. v. 36, no. 4, p. 455-66, 9 fig.)

Contains a report on experiments with guinea pigs subjected to monaural irrigation of the external auditory meatus with cold water. In all (four) animals which had more than one irrigation, new bone was produced in the submucosa of the bulla of the middle ear on the treated side. There was no change in the labyrinthine capsule except for slight growth of new bone on the most exposed part of the promontory. The slight changes in the external canal were not ascertained to be of experimental origin. The significance of these experiments in elucidating the frequent occurrence of exostoses in the external auditory canal of persons indulging in cold water swimming, is stressed. **Copy seen:** DLC.

29085. FOX, H. MUNRO, and others. Influence of temperature and iron on haemoglobin synthesis by *Daphnia*. (Nature, Feb. 21, 1953. v. 171, no. 4347, p. 347) 3 refs. *Other authors:* Elizabeth A. Phear and Barbara M. Gilchrist.

Contains an advance abstract of a study showing that in this crustacean, synthesis of hemoglobin is reduced at lower temperatures. The increased synthesis at higher temperatures is believed to be due to the low oxygen content of the tissues caused by a high metabolic rate. **Copy seen:** DSG.

29086. FRADKIN, N. G. Akademik I. I. Lepekhin i ego puteshestviâ po Rossii v 1768-1773 gg. Moskva, Geografiz, 1950. 215 p., ports., illus., fold. map. 8 refs. **Title tr.:** Academician I. I. Lepekhin and his travels in Russia in 1768-1773.

A biography of Ivan Ivanovich Lepekhin, 1740-1802, with extensive characterization of his contemporaries and aides, based on his *Dnevnyâ zapiski*, 1795-1814, q. v., and other, partly unpublished, sources. His travels are described within the frame of expeditions sponsored by the Russian Academy of Sciences, including (p. 81-97) his trip in 1771-72 to the Russian North, and his investigation of the shores and islands of the White Sea. His discovery that Kanin Peninsula is not an island, as had been previously assumed, is mentioned (p. 94-96). Map shows itineraries of his travels. Documentary texts are appended (p. 202-212). Eight works on Lepekhin are listed (p.

213-14) and numerous other sources cited in footnotes. **Copy seen:** DLC.

29087. FRÄNKEL, ERDHART. Die untere Eleonore Bay Formation im Alpefjord. København, 1951. 15 p. sketch, map 2 sections. (Meddelelser om Grønland. Bd. 151, no. 6) **Title tr.:** The lower Eleonore Bay formation in the Alpefjord.

Contains a stratigraphic study made in late summer 1950, during the Danish East Greenland Expedition, with sections on the general and geological character of the area in East Greenland (approx. 72° 22' N. 25° 15' W.); earlier investigations; special stratigraphy and petrography; the position of the Alpefjord series in the Eleonore Bay formation etc.

Contains a brief geographical description of Svalbard with special attention to the coal deposits and hunting and fishing industries. A short political history of the islands to 1951 is followed by the texts of the 1920 Treaty of Spitsbergen, and of the various notes, resolutions, and communiqués, Jan. 1947-Dec. 1951, between the Soviet and Norwegian governments concerning the fortification of Spitsbergen and Norway's entrance into the North Atlantic Treaty Organization. Texts are given of Norwegian-Soviet notes regarding the transfer of bodies of Russian soldiers from graves in the provinces of Troms, Nordland, and Finnmark to the island of Tjötta. (Summary in *Polar Record*, July 1953).

29089. FRANK, EDMUND, and K. WEZLER. Physikalische Wärmeregulation gegen Kälte und Hitze im Sauerstoffmangel. (Pflügers Archiv für die gesamte Physiologie, 1948. Bd. 250, Heft 4, p. 598-622, 12 illus., 3 tables) 8 refs. **Title tr.:** Physical thermoregulation against cold and heat in the presence of oxygen deficiency.

Contains a study of normal persons exposed to a cold (or warm) atmosphere

deficient in oxygen, aimed to determine to what extent and degree physical thermoregulation is impaired by hypoxemia. An increased heat loss was noted in the cold environment due to hyperventilation; increased heat loss through the skin was also observed, and is caused by insufficient vasoconstriction brought about by oxygen deficiency.

29092. FRANZISKET, LUDWIG. Die Temperaturabhängigkeit der Gewohnheitsbildung und der endogenen Bildung zentralnervöser Erregungsfähigkeit. (Pflügers Archiv für die gesamte Physiologie, 1952. v. 255, no. 3, p. 204-212, tables) 12 refs. **Title tr.:** The dependence on temperature of habit-formation and of endogenous formation of central-nervous irritability.

Contains an account of experiments with decerebrated frogs. Central-nervous irritability produced by repeated habit-forming stimuli increased when the animals were kept at optimal (24° C.) temperature but failed to increase when kept at 3° C. The build-up of irritability

after exhaustion also depends on temperature and time. The role of metabolism in central irritability is also discussed.

29093. FRAREY MURRAY JAMES, 1917- . Preliminary map Willbob Lake, Quebec and Newfoundland (descriptive notes). Ottawa, 1952. 8 p. Mimeographed. fold. map 42 x 48 in. (Canada. Geological Survey. Paper 52-16)

The map (scale, 1 in. : $\frac{1}{2}$ mi.) covers an area on the Quebec-Labrador boundary, northeast of Knob Lake (between 55° - $55^{\circ}15'$ N. and 66° - $66^{\circ}30'$ W.) entirely within the concession of the Labrador Mining & Exploration Co. The geology of the Proterozoic sedimentary, intrusive, and volcanic rocks of the area is discussed, with notes on the structural units, main fault directions, and shear zones. Prominent mineral deposits of copper, zinc, and nickel, and other mineralized areas are described.

Copy seen: DGS.

29094. FRASER, J. KEITH The islands in Foxe Basin. (Geographical bulletin, 1953. No. 4, p. 1-31, illus., maps) 26 refs.

Contains an account of the Foxe Basin expedition of the Canadian Geographical Branch in Aug.-Oct. 1949. The party headed by T. H. Manning, included geographers, a geologist, and a botanist. The purpose of the expedition was to make "ground reconnaissance of areas photographed from the air," to "carry out geomorphological, geological, botanical, zoological, and archeological studies, establish astronomic positions, take soundings and tidal observations, and report on weather and ice conditions." The trip was made by ship, the *Nauja* (described in the Appendix), and parties put ashore on the islands. Islands in James Bay and settlements on the east coast of Hudson Bay were visited during the first part of the expedition. Islands studied and described here include Prince Charles, Air Force, the Tweedsmuir Islands, Foley, Anderson, South Spicer, North Spicer, Rowley, Bray, Koch, Jens Munk, and the Calthorpe Islands. Summary in French.

29095. FRAZER, J. F. D. The effect of insulin and magnesium chloride on the temperature of the rat. (Journal of physiology, 1953. v. 119, p. 49P) 4 refs.

In rats exposed to 5° - 8° C. insulin injections caused a drop in rectal temperature to 29° C., magnesium chloride injections a drop to 24° - 25.5° C., and both together to 22° - 24° C. At room temperature combined administration of both substances caused a drop to 25.5° in rectal temperature. The hypothermic rats did not show signs of hibernation.

Copy seen: DSG.

FRAZER, Sir JAMES GEORGE, 1854-1941, see Bogoraz, V. G. Mythe de l'animal-Dieux. 1928. No. 28223.

29096. FRAZIER, RUSSELL GEORGE, 1893- . Acclimatization and the effects of cold on the human body as observed at Little America III, on the United States Antarctic Service Expedition 1939-1941. (American Philosophical Society. Proceedings, 1945. v. 89, p. 249-55, 6 illus. incl. 3 diagrs.)

Contains information on blood-counts (also made prior to and during the voyage); respiratory diseases and flu, toothache, frostbite, amoebic dysentery (one case), and psychology during the expedition. This is followed by an account of experiments, made at the base, on the response of lightly clothed subjects to short exposure to cold and the reaction upon return to room temperature; blood pressure, pulse and respiratory rate were measured.

29097. FREBOLD, HANS, 1899- . Correlation of the Jurassic formations of Canada. (Geological Society of America. Bulletin, Oct. 1953. v. 64, no. 10, p. 1229-46, text map, fold. chart) 105 refs.

Includes short sections on the Yukon and on Prince Patrick Island. Lower and probably Middle Jurassic has been identified in southern Yukon in the Laberge Lake area (61° N. 135° 08' W.), and the Upper and Middle Liassic in the Carmacks district northwest of Laberge Lake on the Yukon River and in the Bennett area in the Yukon - British Columbia border region. Upper Jurassic has been found in northern Yukon along the Firth River and at Black Mountain on the west side of the Mackenzie River delta. An ammonite found at Point Wilkie on Prince Patrick Island probably belongs to basal Middle Jurassic, and a collection at Bay Cliff, one mile northwest of Mould Bay station probably indicates other Jurassic rocks. A similar

study on Triassic formations was made by F. H. McLearn, q. v.

Contains résumé of a speculation on the origin of Eskimos, derived from their system of counting. The Eskimo numerals, one, two and three, according to the author, disclose the progenitors of the Eskimos originally to have been northwestern Indians. They migrated with the ice of the ice age further northwards and settled around the Alaska Peninsula and on the Aleutian islands particularly Unimak.

Copy seen: DLC.

29102. FREEMAN, LEWIS RANSOME, 1878- . Farthest north by railway. (World's work, 1928. v. 56, p. 306-315, illus., map)

The advantages of shipping over the route from the Prairies through Churchill to Europe are outlined. The difficulties of constructing the Hudson Bay Railway and the navigation problems in Hudson Bay are enumerated. **Copy seen:** DLC.

29103. FREEMAN, THOMAS NESBITT, 1911- . The arctic Lepidoptera of Baker Lake, North West Territories. (Lepidopterists' news, 1948. v. 2, no. 6, p. 63-65, illus.)

Contains a list of 22 arctic lepidopters, collected in the vicinity of Baker Lake, Keewatin District, with some critical notes and data on habitat and local distribution.

Copy seen: MH-Z.

29104. FREEMAN, THOMAS NESBITT, 1911- . The Northern Insect Survey for 1952. (Arctic circular, Mar.-May 1953. v. 6, no. 3, p. 30-32)

In 1952, field parties were sent to Naknek, Alaska; Holman Island, Mould Bay, and Coral Harbour in the Northwest Territories; Ft. Churchill, Manitoba; Ogoki River, northern Ontario; and Søndre Strømfjord, West Greenland. At Ft. Churchill an ecological study was made to determine the number of different biotopes characteristic of the Arctic and sub-Arctic, and their insect indicators. Elsewhere, studies of distribution and relative abundance of

biting flies and other insects were continued. Results at each locality are briefly noted.

29105. FREGLY, MELVIN J. Minimal exposures needed to acclimatize rats to cold. (American journal of physiology, June 1953. v. 173, no. 3, p. 393-402, illus., tables) 25 refs.

Contains a study of the problem with several methods and numerous variants. Acclimatization as judged by colonic cooling rate manifested itself sometime after the second and fourth day of exposure to cold. Rats which lived in the cold for ten days rewarmed more quickly than controls. Two weeks' sojourn of cold-acclimatized rats at room temperature caused their complete deacclimatization. Animals exposed on alternate days to cold air became acclimatized between the second and third exposure to cold. Resting colonic temperatures of acclimatized and control rats did not differ until the animals had been in cold air for ten days, when they became higher in the acclimatized group. The effects of acclimatization on the righting reflex at simulated high altitude were also studied.

Title tr.: On the effect of high-altitude climate, especially of cold, on the teeth.

Contains a study elicited by recurrent complaints on adverse effects of high altitude flying on the teeth; the study consists of observations in a flying unit and a series of experiments. The former suggested that cold is responsible for general deterioration of the teeth, for bleeding or numbness of gums, while low atmospheric pressure, or that and low temperature cause pain in filled or devitalized teeth, loosening and loss of fillings, etc. The experiments, which concerned filled and devitalized teeth, showed that cold alone is not responsible, and, low pressure, the dryness of

inhaled oxygen, dietary factors, etc., probably have a contributory effect.

29108. FREUNDT, E. A. Komsa-Fosna-Sandarna; problems of the Scandinavian Mesolithicum. (Acta archaeologica, 1948. v. 19, p. 1-68, 19 illus., text map). About 100 refs.

Contains a study based on investigation of museum objects and literature, surveying the three important stone age cultures of Scandinavia, especially in regard to the questions of origin and dating. (1) The Komsa culture, known from some sixty-odd settlements in an extensive area along the arctic coast in northernmost Norway, is considered by the writer to be clearly mesolithic; the geological dating from the transgression of the ancient shore-line system to Tapes Period is considered as doubtful. (2) The Fosna culture, known from the west coast region between Trondheim and Bergen, also other localities, shows identity with the Komsa; geologically the Fosna is datable to the early Ancyclus Period or just prior to it, geological dating, however, is considered by the author as inadequate, and he tries to date from the archeological investigation of implements. The southern origin of the Komsa-Fosna culture is stressed. Evidence indicates that its bearers were descendants of the Pinnberg-Lyngby (Schleswig-Holstein) hunters who, following the northward retreating reindeer herds during the change of climate,

reached the coasts of Norway and south-west Sweden. The Komsa-Fosna culture, therefore, from the archeological viewpoint, is of a later date which geologically corresponds to the end of the Atlantic Period, while the northern places consequently must be of even later date. The Fosna, at least in its last phase, reaches up to the neolithic age. (3) The Sandarna culture (named from a settlement near Gothenburg, Sweden) is a culture in itself and not related to Komsa-Fosna. **Copy seen:** DLC.

29109. FREY, J. R., and M. A. SCHOCH. Therapeutische Versuche bei Psoriasis mit Vitamin A, zugleich ein Beitrag zur A-Hypervitaminose. (Dermatologica, 1952, v. 104, nr. 2, p. 80-86, 2 tables) 13 refs. **Title tr.:** Therapeutic experiments on psoriasis with vitamin A, also a contribution to hypervitaminosis A.

Contains a report on nine cases of psoriasis, treated orally with synthetic vitamin-A acetate. Daily doses of 400,000 I. U. were well tolerated. Doses of one million units and more caused untoward symptoms, which are described, and compared with cases of A-hypervitaminosis from literature and with experimental A-hypervitaminosis in rats.

29110. FREY, RICHARD, 1886- Neue Diptera brachycera aus Finnland und angrenzenden Ländern, IV. (Notulae entomologicae, 1946, pub. 1947, v. 26, no. 3-4, p. 65-69, illus.) **Title tr.:** New trachycerous dipters from Finland and adjoining countries, IV.

Contains descriptions of four new species of brachycerous dipters, including *Calobata (Compsobata) nitidicollis* n. sp. found in the Salla region of Finnish Lapland, and also known from Swedish Lapland and northern regions of European Russia and Siberia. A key is given for the determination of three species of the genus *Acartophthalmus* including *A. nigrinus* native to Kuusamo region and Petsamo Lappmark. For parts I-II of this work see *Arctic Bibliography*, No. 21931-21932. **Copy seen:** CU.

29111. FREY, RICHARD, 1886- En resa till Kola-halvön. (Terra, 1915, v. 27, p. 111-26, illus.) **Title tr.:** A trip to the Kola Peninsula.

An account of a journey through Kola Peninsula in the summer of 1913. The author, an entomologist, points out that Kola is very much like Scandinavia,

Finland, Russian Karelia and the Onega region in geographical, geological, and botanical-zoological respects. His investigations took him from Kuzomen' on the White Sea northward to Kandalaksha, Lake Inandra, Kola, and Aleksandrovsk (now Polyarnyy, 69°15' N. 33°30' E.). The town of Ponoy on the easternmost tip of the peninsula was also visited, and here as well as at Gavrilov on the Murman coast, a tundra landscape was noted. The vegetation of the various parts of the peninsula visited is described.

29123. FRIEDMAN, NATHAN BARUCH, 1911-, and others. The pathology of experimental frostbite. (*American journal of the medical sciences*, Jan. 1947. v. 213, p. 61-67, 18 illus. on 3 plates) 9 refs. Other authors: K. Lange and D. Weiner.

Contains a histological study of frost-bitten legs of rabbits. The fundamental lesions were found to be vascular. Formation of erythrocytic thrombi leads to vascular occlusion and ischemic gangrene. Heparin prevented both thrombosis and gangrene. **Copy seen:** DLC.

29124. FRIEDMAN, NATHAN BARUCH, 1911-. Pathology of experimental immersion foot. (*Archives of pathology*, Jan. 1950. v. 49, no. 1, p. 21-26, illus.) 5 refs. Other authors: Kurt Lange and David Weiner.

Exposure of rabbits' hind legs to water of 35°-39° F. resulted in degenerative changes of nerve and muscle. Vascular lesions, like those produced by exposure to temperatures below 32° F., were not observed. It is concluded that in rabbit, unlike in man, there is an essential difference between injuries of chilling and those of freezing. **Copy seen:** DSG.

29125. FRIEDMAN, NATHAN BARUCH, 1911-. The pathology of trench foot. (*American journal of*

pathology, May 1945. v. 21, no. 3, p. 387-433, 36 fig. on 10 plates, table) 115 refs.

Contains a study of early morphological changes in trench foot, based on material from 14 cases. Disturbance of circulation and stagnation of blood, leading to thrombosis and gangrene; also profound changes in the fat tissue and neuromuscular and osseous alterations were observed. Clinical data and gross pathological and x-ray data are also presented. The conclusion is reached that all injuries resulting from exposure to low temperatures show "a common pattern and result from a similar train of events." Abstract by W. Blackwood in *Bulletin of war medicine*, Feb. 1946. v. 6, no. 6, p. 275-76; also abstracted in *Army medical bulletin*, Feb. 1945. no. 85, p. 3.

29131. FRISTRUP, BØRGE. Climate and glaciology of Peary Land, North Greenland. (International Geodetic and Geophysical Union. Association of Scien-

tific Hydrology. General Assembly, Brussels, 1951, pub. 1952? t. 1, p. 185-93, illus., table, graphs, text map) 5 refs.

The Danish Peary Land Expedition's wintering and weather station at Jørgen Brønlands Fjord in southern Peary Land is described and climatic conditions for Peary Land as a whole are discussed in some detail. The area is designated as a high-arctic desert, and the effects on the landscape of wind, frost, and extremely low precipitation are emphasized. Glaciers in the area are a "special high-arctic type" characterized by very small annual accumulation and ablation. The few glaciers in eastern and southern Peary Land are typical icecap or plateau glaciers; the numerous ones in the northwest include a number of typical valley glaciers. The icecap Chr. Erichsen Brae in southern Peary Land is discussed and glaciological data tabulated. A comparison is made between the behavior of the dead icecaps such as Chr. Erichsen Brae and the outlet glaciers from the inland ice. The present glacial retreat is described.

Contains a lecture delivered before the Geographical Society (Denmark) Feb. 2, 1948 on the forerunner to a projected two-year over-wintering expedition in which the author participated under leadership of Eigil Knuth. The purpose of the summer 1947 trip was to make a reconnaissance and gain arctic experience with the *Catalina* aircraft used for transport from the supply base to the field base on Jørgen Brønlands Fjord. The glaciological work done is briefly described. Some biological, geological, and archeological collections were brought home.

This lecture, delivered before the Geographical Society (Denmark) Feb. 6, 1950 reviews the work during 1947-49 of the Danish Peary Land Expedition 1947-49. It was air-borne, and the first to have wintered in that part of Greenland (on the south coast of Jørgen Brønlunds Fjord, an arm of Independence Fjord). The geography, topography, and climatology of Peary Land which reaches 83°39' N. lat. at Cape Morris Jesup and covers an area of 42,700 sq. km. are discussed generally, glaciology more specifically.

Contains a brief note on the glaciological, geological and biological work in progress in the Kebnekajse region under leadership of Hans W. Ahlmann and his collaborator Walter Schytt.

Copy seen: DLC.

29136. FRISTRUP, BØRGE. Wind erosion within the arctic deserts. (Geografisk tidsskrift, København, 1952/53. v. 52, p. 51-65, illus., 5 tables, diagr., graph) 30 refs.

Contains a study based upon observations in Peary Land, North Greenland, made during the 1947-50 Danish Peary Land Expedition (meteorological station at "Brønlund. Hus," Jørgen Brønlunds Fjord, a branch of Independence Fjord), and during the University of Michigan Greenland Expeditions in 1926-33 at Søndre Strømfjord, West Greenland (meteorological station at Mount Evans, 66°51' N. 50°50' W.). The climate of high-arctic deserts is described, with emphasis on the effects of very low precipitation, the high evaporation and erosive force of the wind, and the difference in temperature and precipitation between the interior and coastal areas of Peary Land. Wind erosion and the polishing of stones by drifting sand, snow, and ice needles is discussed in

some detail and compared with wind erosion in tropical and sub-tropical deserts. Ice layers formed during autumn or beginning of winter in many valleys protect stones from wind polishing. The ice layer is attributed to water from the active layer being forced out by pressure and freezing on the frozen soil. Tables give observations of temperature and wind velocity at Jørgen Brønlunds Fjord 1948-50, and Mount Evans 1928-1929.

29153. FÜRST, CARL MAGNUS, 1854-1935, and F. C. C. HANSEN. Crania Groenlandica. A description of Green-

land Eskimo crania with an introduction on the geography and history of Greenland. Copenhagen, Andr. Fred. Høst & Søn, 1915. viii, 234 p. 99 tables of measurements, 52 plates, 6 views, 5 maps (incl. 1 fold.); in text: 40 portraits, maps, figures, 19 diagrs, 74 curves, and 133 tables of measurements.

Contains description and detailed individual measurements of 380 crania (14 of these immature and 8 unsexed), most of them in the collection of the Anatomical Museum of the University of Copenhagen, some in scientific institutions at Lund, Uppsala, Stockholm, and Oslo. All the crania were found in graves, and represent broadly the Greenland Eskimo population; the more densely populated west coast, however, is represented by a larger number of specimens than the southwestern and eastern coasts, and the region of Cape York and northward, by eight specimens only. The anthropometric study of each cranium includes 34 direct measurements, 13 indices and 12 angles of the cranium, and seven measurements of the mandible. A series of diagrams of the sagittal section and photographs in five normae of 52 skulls are given. Some conclusions are drawn: (1) the Greenland Eskimo cranium is a typical Eskimo cranium; (2) the Eskimo cranium differs from others and forms a racial type; (3) the Greenland Eskimo cranium is not that of a primitive race; (4) present knowledge allows no conclusion as to Eskimo descent from, or affinity with other races; (5) most of the alterations in the framework of the bones have had an indirect effect upon the form of the softer portions; (6) the anthropological characters cannot contribute to a solution of the question of Eskimo migration in Greenland, owing to the fact that the homogeneity of these characters show the Eskimos of both the west and east coasts to be of the same racial type (p. 232). In the introduction, the physical and biological nature, the history, exploration and the present-day population and government in Greenland are outlined. Several extensive lists of literature are included (p. 27-39, 52-53, 232-34).

29161. GABRAN, OSKAR. Die Luftdurchlässigkeit einer Schneedecke und deren Einfluss auf die Überwinterung der Pflanzen. (Meteorologische Zeitschrift, Sept. 1939. Bd. 56, p. 354-56, table, diagr.) 2 refs. *Title tr.:* The air permeability of a snow cover and its influence on the hibernation of plants.

"The air permeability of fresh, loose, compacted and crusted snow, and frozen, unfrozen, and ice-covered sawdust was tested. Air was forced from an air bell into a container filled with snow and connected to four petroleum manometers by rubber hoses. The air bell was lifted and filled with new air after each experiment. Test results indicate that 0.0543 cu. m. of air passed from the bell through a column of snow 685 mm. high and 0.159 sq. m. cross section, in 1.25-2 min. Fresh loose snow has a high air permeability. The air permeability and diffusivity of crusted snow depend on the condition of the crust. Reduced air change and diffusion due to snow covering unfrozen ground or to ice-crusted snow are discussed in terms of plant growth."—SIPRE.

GABRIELSON, IRA NOEL, 1889- . Alaskan waterfowl and their management. See Alaskan Science Conference, Nov. 1950. Proceedings, 1951. No. 20117.

29162. GABRIELSON, IRA NOEL, 1889- , and F. C. LINCOLN. The races of song sparrow in Alaska. (Condor, 1951. v. 53, no. 5, p. 250-55)

Contains a review of all eight Alaskan races of song sparrow (Melospiza melodia) with critical notes, diagnoses of two new subspecies (M. m. maxima and M. m. amaka) and data on their ecology and local distribution. The range of the song sparrow extends along the coast from Dixon's Entrance on the east to Attu

Island at the extreme western end of the Aleutians.

29163. GABRIELSON, IRA NOEL, 1889-, and **F. C. LINCOLN.** Status of the lesser common loon. (Condor, 1953, v. 55, no. 6, p. 314-15)

Deals with the races of common loon; *Gavia immer elasson*, the lesser common loon, given recognition by the A. O. U. Committee on classification and nomenclature, is placed into synonymy by the authors, and *Gavia immer* native to southern Alaska, is recommended to be restored to its monotypic status.

29164. GABUS, JEAN. Sous les tentes lapones. Neuchâtel, Victor Attinger, 1937. 154 p. 27 illus. on plates, 2 maps. **Title tr.:** Under the Lapp tents.

Contains account of author's trip in 1936, to Finland and Lapland, traveling from Turku by Helsinki, Lake Ladoga, north to Rovaniemi, Ivalo, Inari and Petsamo. He visited the Inari Lapps in the village of Uutela, and the Skolt Lapps around Petsamo. Notes on present-day Lapps are included: their customs, beliefs and superstitions (the feast of St. John in Inari, Ukko worship, sorcery); the life of reindeer nomads, their herds and economic situation; traits of character; the Skolt Lapps (only 340), their fishing trade, and their rapid cultural and physical disintegration. Some photographs have ethnological value. The author was accompanied by Neumeyer, a Tyrolian settled in Lapland, who helped him as an interpreter.

29165. GABUS, JEAN. Touctou; chez les hommes qui-vivent-loin-du-sel. Neuchâtel, Victor Attinger, 1943. 205 p. illus., 5 text maps, 8 plates. **Title tr.:** Touctou; among the people who live far from salt.

Contains popular account of author's stay with the Ahearmiut Eskimos, one of the two groups he studied in the interior of Keewatin District in 1938-39. "Touctou" means caribou, essential to the life of these people, and he shows its importance in their economic, social, religious and artistic activities. Several folk songs are quoted (in French). A summary report is appended (p. 199-204) on the Swiss Ethnographic Expedition to Hudson Bay, 1938-39, with a list of materials collected for the museums of Bâle and Neuchâtel.

29166. GABUS, JEAN. Vie et coutumes des Esquimaux caribous. Paris, Payot, 1944. 224 p. illus., text maps, 8 plates, 29 refs. Foreword by P. W. Schmidt. **Title tr.:** Life and customs of the Caribou Eskimos.

Contains results of author's one-man expedition in 1938-1939 in the Maguse-Kazan River region, west of Hudson Bay. He lived for 18 months among the Padlermiut and Ahearmiut Eskimo tribes, studying their social life and psychology, and participated in their hunting and fishing parties. Geography and climate of the region is described first, and its influence on the mode of life (nomadism) and psychology of the people is discussed. The dwellings, tents and snowhouses (construction, uses, etc.) are treated in detail with illus. Description of social life includes chapters on marriage, family, education, games, relations between tribes, property, government and justice. The psychical life is characterized by analyzing the folk character, art and song, conception of multiple souls of man, and religious conceptions (shamans and clairvoyants, mystic powers and gods, sacrifices and prayers). A summary of achievements of the Mission ethnographique suisse à la Baie d'Hudson, 1938-1939, is appended.

29167. GAD, FINN. Historiens maend og kvinder i Grønlands tjeneste. (Grønland, 1952? hefte 1, p. 28-29, port.) **Title tr.:** Men and women of history in Greenland's service.

Contains a biographic study of Hinrich Johannes Rink (Aug. 26, 1819-Dec. 15, 1893), scientist and administrator. He went to Upernavik and Umanak (1848-51) to investigate finds of graphite, but it was his work on movement of ice (1853) which made him "the classical Rink." He was colonial governor in Julianehaab 1853, inspector for South Greenland from 1855 to 1868, when he returned to Copenhagen, and in 1871 became director of the Royal Greenlandic Trade and Administration Dept. Rink's publications on Greenland are mentioned. His interest in the development of native Green-

landers is stressed: he created the super-intendent's institution 1862-1863 in which Greenlanders could become politically trained in spite of language difficulties; he set up his own print shop from which *Ahuagadliutit* (i. e. reading) in Greenlandic was distributed free, and later edited and printed by Greenlanders themselves. His idea of vocational training of Greenlanders in Denmark resulted in the "Greenlander-home" in Copenhagen. His unorthodox leadership of Greenland drew criticism, and Rink resigned 1882. But his work has borne results.

29168. GAHS, ALEXANDER. Kopf-, Schädel- und Langknochenopfer bei Rentiervölkern. (*In*: Festschrift, publication d'hommage offerte au P. W. Schmidt. Wien, 1928, p. 232-68) **Title tr.:** The sacrifice of head, skull and long bones among reindeer-keeping peoples.

Contains investigation on the primitive sacrificial practice of making piles of the skulls and bones of reindeer or bear, as widely practiced by the Yurak Samoyeds, northern Tungus, Ainu, Gilyaks, reindeer Koryaks and the Central Eskimos of King William Island and Melville Peninsula. Sacrifices of this kind apparently were made to the supreme god, or the god of heaven, who gives man luck in hunting, and such sacrifices may be considered as "Primizialopfer." Remains of similar offerings (piles of bear skulls and long bones) were found also from the oldest European prehistoric period, Pre-moustérien (in the caverns of Drachenloch, Switzerland, and Petershöhle, Bavaria); and the bear ceremonies, similar to those of the present-day Gilyaks, were practiced by the Europeans of the Magdalenien period, as they are pictured on paintings and sculpture found in the caverns of Montespan, France. The article is based on literature and has 97 bibliographical footnotes.

"Experience of military road operations during the winters 1941-42 and 1942-43 showed some peculiarities of snow removal procedure caused by intensive and long-lasting snowstorms. Snowdrifts were observed 61 times during Jan.-May 1942, and 54 times during winter of 1942-43. The wind velocity accompanying snowstorms reached 10-15 m./sec. and the usual strip snow fences were torn down. Better snow prevention was obtained with strip snow fences, 1.5-2.0 m. high, located at a distance from the road equal to 20-40 times the height of the snow fence. The second line of snow fences

was placed 15-20 m. from the first line in regions of heavy snowdrifts. Rearrangement of snow fences increased their effectiveness. Snowbanks and snow trenches were ineffective for snowdrift prevention. Roads were kept open continuously with rotary snowplows like the *Niagara* or *Snogo*."—SIPRE.

29173. GALITZINE, Prince ERN. Manners and customs of the Yacoutes. (British Association for the Advancement of Science. Report, 1853, pub. 1854. Notices and abstracts, p. 80-82)

Contains brief notes (translated and communicated by Dr. Norton Shaw) on social organization of the Yakuts (elections of "small princes" and "heads" of the native administration), their boats made from the bark and trunk of the birch, their tents, clothing, food and cooking, the shamans and religious beliefs, marriage, etc. **Copy seen:** DLC.

29174. GALKINA, E. A. *Primenenie aëros'emki pri izuchenii bolotnykh massivov.* (In: Vsesoiūznyi geograficheskii s"ezd. 2d, Leningrad, 1947. Trudy, 1948, t. 2, p. 443-49, diagrs.) **Title tr.:** Use of air photography for investigation of an extensive marsh area.

Description of characteristic features of 14 main types of marshes, illustrated by diagrams and based on works of N. Ā. Kats and on materials from air surveys, partly in the northern parts of Leningradskaya Oblast', Karelia, Arkhangel'skaya Oblast', Ural and Omskaya Oblast'. Further application of air photography to the study of marshes is suggested. **Copy seen:** DLC.

29175. GALLI, TOMMASO. Influenza della funzione tiroidea nella predisposizione alle lesioni da freddo. (*Minerva medica*, Dec. 15, 1940. anno 31, v. 2, n. 50, p. 590-92) **Title tr.:** The influence of thyroid function on predisposition to lesions due to cold.

The human thermoregulatory mechanism in general, the role of the thyroid in carbohydrate- and basal metabolism, etc. are dealt with. Then follows report on basal metabolic rate in 100, non-febrile patients with first-second degree frostbite. 48 percent showed a deviation from the normal: 29 percent a diminution, 19 percent an increase in basal metabolic rate. The significance of these findings is discussed. **Copy seen:** DSG.

29176. GALLOWAY, JOHN O. Developments in western Canada in 1952. (American Association of Petroleum Geologists. Bulletin, June 1953. v. 37, no. 6, p. 1495-1505, 4 text maps, 3 tables) 4 refs.

Includes short note on exploration for oil and gas in 1952, in the Northwest Territories, which followed the provinces in drilling activity, but, with British Columbia, led in increase in land and lease activity. "In 1952, 12 exploratory wells were drilled (16,427 ft.), but no discoveries were made. All wells were shallow, the deepest being 2,422 ft."

Contains a summary of a popular lecture which, among other things, mentions the hardening of babies by snow and cold water. **Copy seen:** DLC.

29180. GAMOV, V. S. Operativnoe lechenie otmorozheniĭ. (Novyi khirurgicheskiĭ arkhiv, 1941. t. 48, no. 11-12 (kn. 189-90), p. 304-310) **Title tr.:** Operative treatment of frostbite.

Contains an account of frostbite surgery in World War I and in the Spanish civil war; early versus late surgery; author's experiences and observations in surgery of all degrees of frostbite. Conservative treatment of frostbite of limbs is rejected for several reasons given. Early surgery of third and fourth degree frostbite according to the method of Ar'ev is recommended and its advantages presented. Operations and amputations (including early amputations) with sutures, produced better results than those without sutures. **Copy seen:** DSG.

29181. GAMS, HELMUT. *Trematodon brevicollis* Hornschuch, en for Sverige ny arktiskt-alpine moss. (Botanisk notiser, 1950. häfte 4, p. 451-56, 2 text maps) 28 refs. **Title tr.:** *Trematodon brevicollis* Hornschuch, an arctic-alpine moss new to the flora of Sweden.

Contains some historical notes and data on habitat of this moss found by the author at Vassitjåkko in Torne Lappmark, Swedish Lapland, in the summer of 1950; it was known previously from the mountainous parts of northern Norway (Nordreisa, 69° N.) Kilpisjärvi, Finnish Lapland, and West Greenland. Summary in German. **Copy seen:** MH-A.

29182. GAPONOV, E. Iskopaemye diatomovy vodorosli p. o. Kamchatki. Vladivostok, 1927. 28 p. 28 illus. on 2 plates, fold. col. map. (U.S.S.R. Geologicheskii komitet. Dal'nevostochnoe otdelenie. Materialy po geologii i polezным iskopaemym Dal'nego Vostoka, no. 49) 79 refs. **Title tr.:** Fossil diatoms of the Kamchatka Peninsula.

Contains a description of five samples of diatom-bearing rocks collected in the Olga Bay area (54°34' - 54°40' N. 161°03' - 161°15' E.) and on the Bogachevka River (54°58' N. 160°50' E.) by the Kamchatka oil prospecting expedition of 1923 headed by P. I. Polevol. 44 species of diatoms are identified (of which only 14 are of specifically Kamchatka flora). Map, scale 1:200,000, shows Bogachevka oil field area, also a geological cross section of the Olga Bay area and inset of southern Kamchatka. Summary in German. **Copy seen:** DLC.

29183. GARAI, OLIVER FRANK. Im mersion as a factor in the development of hypertension. (British heart journal, Oct. 1945. v. 7, no. 4, p. 200-206, 2 tables) 11 refs.

Contains a report of cold pressor tests performed on 15 physically fit men who had been immersed, and on controls of non-immersed neurotic and not-neurotic groups. Statistical analysis of the results shows a significant difference between the three groups, a difference attributed to immersion. The possible significance of this difference in its relation to hypertension, is discussed. Abstracted by W. Melville Arnott in *Bulletin of war medicine*, Aug. 1946. v. 6, no. 12, p. 506. **Copy seen:** DSG.

29184. GARBER, CLARK McKINLEY, 1891- Eskimo infanticide. (Scientific monthly, Feb. 1947. v. 64, no. 2, p. 98-102) 6 refs.

Contains an account of a now disappearing practice, based on reports of Boas, Jenness and others, as well as on the author's experience among the Alaska Eskimos. Infanticide is resorted to in times of famine and stress and usually affects girls; crippled or monstrous newborn are also killed, as before, by drowning or leaving them in the open; abortion, unknown before, is spreading under the influence of the white man. **Copy seen:** DLC.

29185. GARDEN, WILLIAM. Alaskan patrol boat. (Rudder, Oct. 1953. v. 69, p. 41, illus.)

Plans and photograph of a 32 ft. power boat, *O. Keta*, designed by William Garden, of Seattle, Wash., for the Alaska Dept. Fisheries. Built by the Commercial Marine Construction Co. of Seattle, Wash., the boat will be used for patrol and research work in southeast Alaskan waters. **Copy seen:** DLC.

29187. GARFIELD, Mrs. VIOLA EDMUNDSON, 1899- . Alaska natives, borrowers and innovators. (*In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 232-40*) 9 refs.

Contains discussion of how foreign cultural goods can be adopted and reshaped. The grizzly bear crest of the Stikine Tlingits is taken as an example, and the reworking and reinterpretation of material, original and borrowed, is traced, following Hallowell's analysis, *Bear ceremonialism*, 1926 (*Arctic Bibliography*, No. 6499). The influence of Whites (fur traders) is discussed and the need stressed to investigate what cultural goods were diffused from northwest America to Asia.

Copy seen: CaMAI; DLC.

GARFIELD, Mrs. VIOLA EDMUNDSON, 1899- . Anthropological research in southeastern Alaska. *See* Alaskan Science Conference, Nov. 1950. *Proceedings, 1951. No. 20117.*

29188. GARFIELD, Mrs. VIOLA EDMUNDSON, 1899- . Possibilities of genetic relationship in northern Pacific moiety structures. (*In: Asia and North America, trans-Pacific contacts, pub. as: Society for American Archaeology. Memoirs, no. 9; supplement to American antiquity, Jan. 1953. v. 18, no. 3, pt. 2, p. 58-61*)

Contains an attempt to study the development of the matrilineal institutions among the Athapaskan tribes of northwest America. Moieties occur in Tlingit, Eyak, Tanaina, Haida, Tahltan and a few other interior tribes, while the Tsimshian have four exogamic divisions; Tlingit, Tsimshian and Haida developed their matrilineal institutions to the fullest; Tlingit and Haida sibs are grouped into moieties, while Tsimshian sibs relate to four exogamous phratries. Sibs are not found in any Eskimo groups, and moieties occur only on North Sound, if at all. The wide distribution of matrilineal descent among Athapaskans points to a relatively old trait, probably diffused from Asia.

Copy seen: DLC.

29189. GARFIELD, Mrs. VIOLA EDMUNDSON, 1899- . The Tsimshian and their neighbors. (*In: American*

Ethnographical Society. The Tsimshian: their arts and music, 1951, p. 3-70, 2 illus., text map)

Contains a presentation of the main cultural features of Tsimshians, living along the banks and tributaries of the Nass and Skeena Rivers in northern British Columbia: their settlements, transportation, food and ownership, organization of production, social and political organization, beliefs in supernatural powers, mythology and folktales, and the arts: music, sculpture, metal work, weaving. The author worked for a winter as teacher in Metlakahla, a Tsimshian village on Annette Island, Alaska, and subsequently visited settlements on the mainland whence the Metlakahltians had migrated since about 1887. The Tsimshians have a distinct language, four exogamous kinship divisions (contrary to the dual divisions of the Tlingit and Haida), and they have elevated certain lineage heads to tribal chiefs. Their mythology and folklore have closer affinities with those of Tlingit and Haida than with the traditions of the coastal tribes to the south. The Northwest Coast painting and sculpture (e.g. totem poles are of pre-White origin, but were fully developed only after arrival of the Europeans.

Copy seen: DLC.

29190. GARFIELD, Mrs. VIOLA EDMUNDSON, 1899- . Tsimshian clan and society. (Washington. University. Publications in anthropology, Feb. 1939. v. 7, no. 3, p. 167-340. 4 tables, 4 plates, 2 fold. maps) 10 refs. Ph. D. thesis to Columbia Univ.

Contains a study based on the author's field work in the summers of 1932, 1935, and 1937 at the Tsimshian village of Fort Simpson, B. C. The situation of chieftainship, the potlatch ceremonies, social structure of the family (including customs at birth, marriage, and funerals), property and warfare, secret societies, and modern social and religious activities are discussed. All the Tsimshian-speaking people are divided into four matrilineal, totemic, non-localized, exogamous clans: those of Eagle, Raven, Wolf, and Blackfish or Killerwhale. Tsimshian customs (e.g. potlatching) and social organization strongly influenced those of the Tlingits. The move of a group of Tsimshians from Port Simpson to Metlakahla in 1862 and thence in 1887 to New Metlakahla on Annette Island, Alaska, is noted. (No. 5547). *Copy seen:* DLC.

29191. GARLAND, THOMAS OWNS-WORTH, and P. D'A. HART. Tuberculosis in Newfoundland. [St. John's, Newfoundland] Trade printers and publishers, Ltd. [1946] 58 p.

Contains reports of a survey made in 1945-46 by two specialists from England with the cooperation of the Newfoundland Dept. of Public Health and Welfare. Information is given on earlier surveys, tuberculosis incidence and mortality, factors responsible for the high TB incidence, measures for reducing the incidence, etc. Some data on Labrador are included and several aspects of the study, e.g., nutrition, housing, are of general interest for arctic study. Abstracted by W. H. Tytler in *Bulletin of hygiene*, London, Feb. 1947, v. 22, p. 105-106.

29192. GARLICK, J. K. Reflexion coefficient of radio waves from frozen terrains. (*Nature*, London, Feb. 7, 1953. v. 171, no. 4345, p. 259)

Contains note on measurements made in northern Canada during Jan.-Feb. 1952 from signals transmitted from aircraft flying at 10,000-20,000 ft. Reflection coefficients from frozen muskeg, barren gravel areas north of the tree line, and frozen ice on Hudson Bay were roughly equivalent to that from dry sand; coefficient from frozen snow-covered forest was appreciably less. Data are given.

Copy seen: DGS; DLC.

29193. GARN, STANLEY MARION, 1922- , and M. M. GERTLER. Age and sex differences in serum cholesterol of Aleut. (*Canadian Medical Association Journal*, Apr. 1951. v. 64, p. 338-40, 3 tables) 11 refs.

Contains account of an investigation made on 81 Aleuts during the 1948 Peabody-Harvard Aleutian Expedition. The mean adult serum cholesterol did not differ significantly from that of Point Barrow Eskimos or adult Americans. No sex difference in total serum cholesterol was noted, but an age difference was observed, suggesting a rise after cessation of growth. The cholesterol ester to total cholesterol ratio in 36 Aleuts closely approximated that of Americans; no sex nor age difference in the ratio was found. Despite a common diet, four cases of cholesterolemia were encountered.

Stature, body-build, and tooth emergence in Aleutian Aleut children. (*Child development*, Dec. 1951. v. 22, no. 4, p. 261-70, tables, diagrs.) 12 refs.

Contains a study of the children of post-war remnants of the populations of Attu, Atka, and Umnak. In stature, the children were slightly below white Americans, but above Chinese and Japanese (both native and American-born), and above Mexicans. Their stature, expressed as percentage of adult stature, exceeds expectancy. In body build, Aleut children differ from whites, and tooth emergence is markedly more advanced than in the latter. No growth retardation as result of war experiences of the group, were found.

29198. GATES, GEORGE OSCAR, 1905- . The Geologic Division of the U. S. Geological Survey. (*In*: Alaskan Science Conference, 3d. Alaska mapping programs and needs, a symposium. *pub.* in Surveying and mapping, Apr.-June 1953. v. 13, no. 2, p. 207-212, 3 text maps)

Contains a survey of geologic mapping needs in Alaska, the status of published geologic maps, and of unpublished maps recently completed or now in progress by the Alaskan Geology Branch. Mapping in Alaska may be classified as: (1) reconnaissance mapping at two to eight miles to the inch; (2) semi-detailed to detailed systematic mapping at about one inch to the mile; and (3) large-scale mapping at less than 500 feet to the inch, of local mineralized areas. About 60 percent of the Territory has been mapped geologically at some scale, about five percent at scales of about one inch to the mile. Areas now being mapped are discussed and the type maps described. Units of the U. S. Geological Survey, other than the Alaskan Geology Branch, which are doing geologic mapping, and the areas covered are noted.

29199. GATES, REGINALD RUGGLES, and G. E. DARBY. Blood groups and physiognomy of British Columbia coastal Indians. (Royal Anthropological Institute of Great Britain and Ireland. *Journal*, 1934. v. 64, p. 23-44, tables, diagrs., 5 plates) 52 refs.

Contains results of blood group investigation among some 300 Indians, including Haidas of the Queen Charlotte Island and Tsimshians on the mainland opposite. Blood groups, photographs and other evidence show that there has been much crossing with Whites. Genetical problems connected with the origin and spread of the blood groups are discussed (comparisons between blood groups of various North American Indian tribes and those of several Asiatic coastal island peoples are given). The present tests show that the Pacific Coast tribes are not a later Mongoloid wave (only two cases of blood group B were found), but resemble other Amerinds in blood groups and other essentials. *Copy seen:* DSI.

29200. GAUB, WILLIAM HENRY, 1899- . An epidemic of typhoid fever at Spenard, Alaska. (*Journal of laboratory and clinical medicine*, June 1951. v. 37, p. 931-36, table) 7 refs.

Contains a report of an epidemic of typhoid fever at Spenard, Alaska, Mar.-Apr. 1950. Seventeen patients aged 4-11 were involved, and an adult carrier incriminated in the outbreak. Chloramphenicol (chloromycetin) accompanied by a high calorie-vitamin diet was effective in treating all cases, and no death occurred. *Salmonella typhosa*, untypeable by bacteriophagy, was the cause of the disease. *Copy seen:* DLC.

29201. GAUBERT, HENRI. Le Cosaque Dezhnev, chasseur de zibelines . . . et géographe. (*Géographia*, Dec. 1953. No. 27, p. 40-45, col. illus., text map) *Title tr.:* The Cossack Dezhnev, fur hunter . . . and geographer.

Contains a popular account of 17th century Cossack penetration of Siberia and arctic seas in search of furs, whales, walrus and mammoth ivory. The voyages in 1636 of Buza and Buldanov on the Laptev and East Siberian Seas are noted. Semen Dezhnev's trip with 25 men from Yakutsk, up the Lena, down the Indigirka and Kolyma to the East Siberian Sea is described, also his voyage to the mouth of the Anadyr' through Bering Strait in 1648, and subsequent exploration of the Anadyr' to 1652. The question of the discovery of Bering Strait, Dezhnev vs. Bering, is discussed.

29202. GAUBERT, HENRI. Le Cosaque Yermak, premier explorateur de la Sibirie. (*Géographia*, Nov. 1953. No. 26, p. 41-46, col. illus., text map) *Title tr.:* The Cossack Yermak, first explorer of Siberia.

Contains a popular historical account of Russian penetration of northwestern Siberia (Omskaya Oblast'). Prior to the late 15th century, Tartar power kept the Russians west of the Urals, but in the reign of Ivan the Terrible, the Stroganov family ascended the Pechora into the Urals in search of furs. In 1580 a band of Cossacks came up from the south, and in 1581, in the pay of the Stroganovs, crossed the Urals and entered Siberia. Cossack-Tartar battles along the western upper tributaries of the Ob' River are described. Following Cossack victory in 1582, Yermak explored north along the Ob' to about latitude 65° or 66° N. until his death in 1584. Although his explorations were of little value in themselves, they paved the way for further Russian expeditions between 1584 and

1636 when the Sea of Okhotsk was reached.

Contains an introductory note on the leading institutions for arctic research, followed by sections on Alaska, Greenland, the European Arctic, the Siberian Arctic. Geographical features, area, population, conquest and exploration, colonization and history, natural resources and their exploitation, communication, settlements, etc., of each region are dealt with. The arctic cap and its significance in military geography is considered in a final section.

29206. GAULT, HUGH RICHARD, 1915-, and others. Some zinc-lead deposits of the Wrangell district, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1953. p. 15-58, 2 plates, 12 maps (8 fold.), 5 tables. (U. S. Geological Survey. Bulletin 998-B. Zinc and lead deposits of southeastern Alaska) 4 refs. **Other authors:** D. L. Rossman, G. M. Flint, Jr., and R. G. Ray.

Contains report in four parts on the deposits at Groundhog Basin, Glacier Basin, Lake claims, and Berg Basin, near Wrangell, southeastern Alaska. Investigations were carried out in 1942-43, 1947-48. In each case, geology, ore deposits, and mines are described, and reserves and grade of ore calculated. Some chemical analyses are given.

Copy seen: DGS.

29207. GAULT, HUGH RICHARD, 1915-, and R. E. FELLOWS. Zinc-copper deposit at Tracy Arm. Petersburg district, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1953. 13 p. text map, diagr. (U. S. Geological Survey. Bulletin 998-A. Zinc and lead deposits of southeastern Alaska)

The Tracy Arm region, northwest of Wrangell, was mapped in 1944 during investigations for lead and zinc. It is underlain by metamorphic rocks flanking the west side of the Coast Range batholith, and intruded by igneous rocks. The deposit is a replacement vein in a shear zone, the average grade of ore being 3.9 percent zinc, 1.5 percent copper. Reserves are calculated.

29209. GEDDES, ARTHUR. Scots Gaelic tales of herding deer or reindeer;

traditions of the habitat and transhumance of semi-domesticated "deer," and of race rivalry. (Folk-lore journal, 1951. v. 62, no. 2, p. 296-311, illus.)

Contains investigation of habitat and habit of reindeer and herdsfolk in Lapland, with comparison of deer-herding in Gaelic tales. A conclusion is suggested that the Gaels (or some preceding people) coming to Scotland with their cattle, found northern reindeer-herding people who had followed the retreat of the ice; that herding gradually disappeared and the reindeer became hunted with other deer. Another possibility is that the legends of a primitive deer-herding people were encountered by the hunters of an advanced people, brought to Scotland, and handed down there. The similarities between reindeer-keeping Lapps and Gaelic fairies are striking; both milked deer, lived "underground," worked at the smith, wove narrow bands, made skin garments, etc. **Copy seen:** DLC.

29210. GEDEONOV, A. A. A. E. Fersman; k 70-letiiu so dnuu rozhdeniia, (Geografiia v shkole, Oct. 1953, no. 5, p. 21-28, port.) **Title tr.:** A. E. Fersman; on the 70th anniversary of his birth.

Biographical sketch of an outstanding Soviet mineralogist, and member of the Academy of Sciences, Aleksandr Evgen'evich Fersman, 1883-1945. His role in the discovery of the industrial deposits of Khibiny in Kola Peninsula and the organization of their exploitation is described (p. 26-28). **Copy seen:** DLC.

29211. GEE, DANIEL H. The Mackenzie River mapping project. (Surveying and mapping, July 1945. v. 5, no. 3, p. 53)

Contains a brief summary of a mapping project along the Mackenzie to the Arctic Ocean and between Norman Wells on the Mackenzie, and Whitehorse in Yukon Territory. The project was undertaken to pick a route for an oil pipeline from the Mackenzie River basin to the Pacific Coast to serve the Pacific war theatre. Maps were compiled in a period of nine months from 34,000 aerial photographs taken by the U. S. Army Air Forces. The maps covered about 160,000 square miles. **Copy seen:** DLC.

29212. GEHENIO, Sister MARIE PIERRE, 1909-, and **B. J. LUYET.** Effect of a preliminary slight dehydration on the survival of "vinegar eels" frozen at -77°C . (Biodynamica, May 1951. v. 7, no. 130, p. 41-52, 2 tables)

Contains an account of experiments with eel-worms, subjected to ultra rapid freezing to -77°C ., followed by quick rewarming. Ninety percent of the worms remained alive when partially dehydrated at 95 percent relative humidity prior to freezing; less than one percent remained alive when dehydration was omitted. Of three relative humidities used, the 95 percent was most effective. A step-wise dehydration using 98 percent prior to 95 percent relative humidity proved superior to a single exposure to 95 percent. **Copy seen:** DLC.

29213. GEHENIO, Sister MARIE PIERRE, 1909-, and **B. J. LUYET.** Effect of light in inducing reproductive processes in the mycetozoon *Physarella oblonga*. (Biodynamica, Dec. 1951. v. 7, no. 136, p. 85-99, 2 fig.) 14 refs.

Contains an account of experiments on the effect of light on sporulation of this species of slime molds. When kept continuously in the dark, none of plasmodia sporulated. When grown in the dark and then exposed to electric light or to diffuse daylight, all cultures fruited. Starvation alone did not induce sporulation but did seem to enhance the action of light in bringing about fruition.

Contains an account of observations on the freezing point of the slimemold *Physarum polycephalum*. Its dead protoplasm consistently exhibited a lower freezing point than the living. Slight variations were observed in the freezing point of living material due apparently to changes in the physiological state of the organism. **Copy seen:** DLC.

29215. GEHENIO, Sister MARIE PIERRE, 1909-, and **B. J. LUYET.** Improved method for obtaining the survival of vinegar "eels" after their solidification at low temperatures. (Biodynamica, Dec. 1947. v. 6, no. 114, p. 140-49, table)

Contains a description of a method through which it became possible to increase to 92 percent, the survival rate of "vinegar eels" solidified at -77°C ., and then rewarmed. It consists in keeping the worms for several hours prior to rapid freezing in a concentrated mass, in a

moist chamber. This treatment also increased the degree of recovery, half of the animals appearing normal 24 hours after freezing.

Contains description of the geology and petrology of the iron ore body on the eastern slope of Luossavaara mountain, Kiruna, northern Sweden. The position of the ore body, and the three geological units, (1) quartz-bearing porphyry below the ore body, (2) Rektor porphyry above, and (3) the ore body itself and its contact phenomena, are described. Origin of the ore and the time sequence of intrusion and alteration are discussed.

29219. GELLERT, JOHANNES F. Die gesellschaftliche, politische und wirtschaftliche Entwicklung der kleinen Völker des sowjetischen Nordens und ihre Auswirkung auf das Landschaftsbild. (Petermanns geographische Mitteilungen, 1953. Jahrg. 97, Heft 2, p. 149-54) 9 refs. **Title tr.:** The social, political and economic development of the small peoples of the Soviet North and its effect upon the form of the landscape.

Introductory account is given of the names of these peoples as used in the past and present. Changes under Soviet rule in the life of northern natives (Paleo-Siberians, Samoyeds, Ugrians, Tungus,

and others, altogether some 27 "small peoples") is reviewed; compared with the situation before the Revolution of 1917; and evaluated from the Soviet viewpoint. Description is given of the administrative reorganization (forming of native soviets and six national districts, voting, etc.); the work of Gostorg (State trading organization) and its some 1700 trading points; the organization of schools and the "cultural bases", ("red tents" etc.); the establishment of a collective economy and arts; attempts to make the nomads into settled people, and to develop among them the Russian form of stable dwellings; the introduction of agriculture, keeping of cattle and horses in the North, and several other experiments in relation to human geography which should alter the "natural" towards a "cultural" landscape. Based on Russian sources, chiefly a paper by M. A. Sergeev (*Arctic Bibliography*, No. 15751). **Copy seen:** DLC.

29229. GEORGI, JOHANN GOTTLIEB, 1729-1802. Beschreibung aller Nationen des Russischen Reichs, ihrer Lebensart, Religion, Gebräuche, Wohnungen, Kleidungen und übrige Merkwürdigkeiten . . . St. Petersburg, C. W. Müller, 1776-

80. 4 pts. in 1 v.: 2 p. l., 530, [10] p., 1 illus. (music), 7 engraved head and tail pieces; and 95 plates in separate vol. **Title tr.:** Description of all the nations of the Russian Empire, their mode of life, religion, customs, dwellings, clothing and other curiosities.

Contains ethnographical description of the peoples of European and Asiatic Russia in four groups: (1) nations of Finnish stock; (2) Tataric; (3) Samoyedic, Manchurian and East Siberian; (4) Mongolian peoples, Russians, and others. The material and spiritual culture of each people is described separately, and their ethnic groups characterized generally at the beginning of each part. The author, a German chemist who settled in Russia, traveled in Central Siberia with Pallas in 1772-74. It is stated in the introduction to the Russian edition that he utilized in his ethnographic descriptions, the works of Müller, Gmelin, Krashennnikov, Steller, and many others; and also that for the copper-plate engravings by Roth and Schlepper, sketches and paintings in possession of the Russian Academy of Sciences were used in part and in part living models. While errors of fact and interpretations are numerous, considerable genuine or only slightly distorted ethnographical data are presented. The northern peoples described and pictured are: Lapps (p. 3-14, plate 1-2); Finns (p. 15-21, plates 3-6), Voguls (p. 65-70); Ostyaks (p. 71-84, plates 22-25); Zyryans (p. 72); Yakuts (p. 260-71, plates 50-55); Samoyeds, including Koibals, Soyots, Kamasins, Karagas and other tribes (p. 273-92, plates 56-58); Yeniseians (p. 293-95); Tungus (p. 306-325, plates 59-63); the Paleo-Siberians, i. e. Yukaghirs, Kamchadals, Koryaks, and Chukchis (p. 326-63, plates 64-73), and the Aleuts (p. 357-74, plate 74). A characterization of the religion of the Eurasian peoples, "shamanistic paganism," is attempted (p. 375-96). *Plates* show men and women (often front and rear views) in national garb, evidently the best or festival garments. Several pictures of shamans in regalia are included. **Copy seen:** DLC.

Lepidoptera, t. 1, vyp. 2. (Nov. ser. no. 56) 145 refs. Title tr.:* Butterflies and moths, v. 1, pt. 2. Caterpillars, pt. 1.

Contains a morphological and systematic study of lepidopterous larvae, with a morphological sketch (p. 5-110); age modifications in external morphology (p. 110-20); biological types of cater-

pillars (p. 120-54); types of damage they cause to plants (p. 154-65); notes on gathering and preparation, and a bibliography (145 items). In the special part (p. 174-316) are keys to the families, genera and species of the larvae of the suborders Microjugata, Macrojugata and Frenata, including a key for the genus *Stigmella* (a leaf borer), arranged by host plants and the types of mines (p. 206-226); a systematic list of about 275 species (three described as new), with descriptive notes and data on habitat, injurious activity and geographic distribution. Indexes are appended (p. 317-36) for subjects, host plants, and Latin names of insects. Some of the species are native to northern regions of the U.S.S.R. and adjoining countries. This work was prepared for publication by the author (in 1941) before his death in 1942. **Copy seen:** DLC; MH-Z.

29236. GERASIMOVSKIĬ, VASILII IVANOVICH. K voprosu o genezise loparitovykh i murmanitovykh mestorozhdenii Lovozerskikh tundr. (Redkie metally, 1936. god 5, no. 5, p. 30-31) 8 refs. **Title tr.:** Problem of the genesis of the loparite and murmanite deposits of the Lovozerskaya Tundra.

Contains a description of the nepheline syenite group where murmanite and loparite occur. Concentration of murmanite in these is not high enough for industrial treatment. Pegmatite formations are also poor in murmanite, though they contain rare earths, niobium and tantalum. Titanium as niobium and tantalum are products of primary crystallization of igneous rocks. **Copy seen:** DLC.

29237. GERASIMOVSKIĬ, VASILII IVANOVICH. Murmanit Lovozerskikh tundr. (Redkie metally, 1936. god 5, no. 4, p. 37-39, table) 5 refs. **Title tr.:** Murmanite of the Lovozerskaya Tundra.

Contains some data on physical and chemical characteristics of murmanite. Its crystal is rhombic, monoclinic. It occurs in pegmatitic rocks: foyaites, urtites and others. The most important deposits are Ninchurt Mt. (urtites) and the eastern slope of Malyy Punkaruayv Mt. in central Kola Peninsula. Murmanite is often combined with feldspar, nepheline, aegirite, sodalite and others.

29241. GERBIL'SKIĬ, N. L. Novyĭ etap v istorii otechestvennogo rybovodstva i zadachi nauki. (Leningrad. Universitet. Vestnik, Aug. 1950. t. 5, no. 8, p. 6-17, tables) *Title tr.:* A new stage in the history of domestic pisciculture, and the tasks of science.

Construction of hydroelectric plants on many rivers of the U.S.S.R. hampers the natural propagation of salmon and other anadromous fish species, and results in a serious decrease in the catch in northwestern and northern fisheries. Artificial mass reproduction of these species in hatcheries is urged, especially in Kola Peninsula, Pechora and other northern districts; so is the acclimatization of non-anadromous species. Experimental data on artificial reproduction in fish farms are given. The paper was delivered to the Conference on reproduction of fish resources, Leningrad Mar. 1950.

denie reduktsii. Leningrad, Izdanie Vsesoiuznogo arkticheskogo instituta, 1934. 36 p. 3 tables. "Improved ex-meridian tables; use explained in English, French and German."

Ex-meridian tables, used in latitude determinations by the meridian altitude method, are for calculating the meridian altitude of any heavenly body from sextant observations made within a few minutes before or after the body crosses the meridian.

The present tables are based upon the formula:

$$r = \frac{200 \sin^2 1/2 t}{K \sin 1'}, \text{ where}$$

$$K = 100 \operatorname{tng} \varphi \pm 100 \operatorname{tng} \delta.$$

(φ = latitude of the observer by dead reckoning; δ = declination of the heavenly body; and t = the hour angle). Table I gives the values of 100 tng (tng = tangent) for angles from 0° to 90°. Table II is for finding the correction by arguments K and by hour angle t . Second corrections are given in Table III.

29246. GERSON, N. C. Noise levels in the American sub-Arctic; (Institute of Radio Engineers. Proceedings, Aug. 1950. v. 38, no. 8, p. 905-916, text maps, diagrs., graphs) 6 refs.

Continuous measurements were made of atmospheric static intensity (terrestrial radio noise) during Jan.-June 1947 at a frequency of 150 kc. at six stations in Canada, including Baker Lake (Keewatin District), Churchill (Northern Manitoba), and Norman Wells (Mackenzie District). Diurnal, seasonal, continental, and latitudinal variations are discussed. Conclusions are that "the greatest portion of terrestrial atmospherics is generated in thunderstorms." Two other sources are noted. The geographical source of most radio static in middle and high latitudes is in the tropics and subtropics where most thunderstorms occur.

v. 76, art. 7, p. 277-442, illus. 1-271) 197 refs.

Contains a critical revision of 86 species of crab-spiders of the United States, Canada and Alaska. The section on biology (p. 278-95) deals with the habits of the Thomisidae, mating habits, spinning activity, post-embryonic development, food and capture of prey, enemies, autospasy and the regeneration of lost appendages, and protective resemblance. In the taxonomic section (p. 295-301) are characteristics of Thomisidae, Misumeninae, and Philodrominae, a key to the Misumenoid genera and descriptions of male and female genitalia. In the special section (p. 302-412) are keys to the species, critical notes, dimensions, type localities and data on distribution; nine species are described as new. *Xysticus nicholsi* n. sp., *X. elegans* and *X. labradorensis*, native to Alaska and a few species occurring in Labrador are included.

Contains a brief description of the cases and the therapeutic problems involved, followed by a presentation of the plaster cast method applied, and discussion of its value in certain cases.

Copy seen: DSG.

29250. GESSAIN, ROBERT, 1907-. L'ajagag, bilboquet Eskimo. (Société des Americanistes de Paris. Journal, 1952. nouv. sér., t. 41, fasc. 2, p. 239-94, 18 text illus., plates 16-25) 46 refs.

Title tr.: *Ajagaq*, the Eskimo cup-and-ball game.

Contains a study based on description and examination of 446 specimens of this popular game of skill, usually made of animal bones. Fifty-one specimens were collected by the author at Angmagssalik, East Greenland, in 1936, another eleven examples of various origins, also data are preserved at Musée de l'Homme in Paris, and the remaining 384 are known from literature or as in possession of different museums; 138 specimens are treated here for the first time. The game may be divided into seventeen types, of archeological or recent origin, and these are disseminated in 13 geographical regions: northeast, east and west and northwest (Thule district) Greenland; Labrador, Pond Inlet, southern Baffin Island and Hudson Strait regions; Southampton and Vansittart Islands, and among the Iglulik, Netsilik, Copper, Caribou and Alaska Eskimos. Only three specimens are known from Alaska (Point Barrow). A detailed description of the game as played at Angmagssalik was given by P.-E. Victor, q.v. **Copy seen:** DSL.

29251. GESSAIN, ROBERT, 1907- - *Masques de danse Eskimo et masques Indiens.* (International Congress of Americanists. 28th, Paris, 1947. Actes. Paris, 1948. p. 265-69, plate) **Title tr.:** Eskimo dance masks and Indian masks.

Contains description of wooden masks of the Angmagssalik Eskimos in East Greenland, collected by the author in 1934, and preserved at Musée de l'Homme in Paris. The Eskimo technique of making masks, their expression, use, and their great similarity with masks of the Iroquois Indians, are discussed. Angmagssalik masks, the author found in 1934, are used now only in entertainment on social occasions, and have no connection with religion or shamanism; and the best dancers and mask makers were in the northerly settlements of the Angmagssiliks. Eskimo masks in other regions, especially Alaska, are noted.

29259. GIDDINGS, JAMES LOUIS, 1909- Chronology of the Kobuk-Kotzebue sites. (Tree ring bulletin, 1948. v. 14, no. 4, p. 26-32)

Contains account and results of the dating of archeological sites in the valley of the Kobuk River (66°45' N. 161°45' W.) northwest Alaska, on its tributary, the Squirrel, and at Kotzebue. The field work headed by the author, was done in 1941-42 and 1947. The region was occupied by well-established Eskimo groups. On the basis of the end dates derived from house timbers, the excavated settlements are estimated to range from 1200 to 1760 A. D. (Ahteut, 1200-1250; Ekseavik, 1380-1420; Old Kotzebue, 1350-1400; intermediate Kotzebue, 1500-1550; Ambler Island, 1730-1760). Some complexes of artifacts are dated as follows: Thule types harpoon heads (Ahteut), through 1400; typical Thule engraving, after 1250 through 1400; points of flinty material which showed striking changes after 1250, 1400 and 1500 are stable after 1700; dog traction (sled shoes and parts of built-up sledge) first appears 1500-1550, etc.

Copy seen: DSI-M.

29260. GIDDINGS, JAMES LOUIS, 1909- Dated Eskimo ruins of an inland zone. (American antiquity, 1944. v. 10, no. 2, p. 113-34, 3 plates, sketch map) 24 refs.

Contains description and evaluation of excavations made in 1940-41, under leadership of the author and sponsored by University of Alaska. The banks of the Kobuk River, from Shungnak to Kotzebue Sound were explored, 66 house sites excavated, a large collection of artifacts made, and tree-ring dates established for five major sites. The sites may be classified into those of the upper river (nomadic hunters sites), middle river (per-

manent fishing sites), and coastal types (sealing sites). Ekseavik and Old Kotzebue sites are roughly contemporary, house pits at Ambler River (right tributary of Kobuk) carry bark dates ranging from 1830 to 1890, and most of the building at Ambler Island was done shortly before A. D. 1730. *Copy seen:* DLC.

29261. GIDDINGS, JAMES LOUIS, 1909- . Dated sites on the Kobuk River, Alaska. (Tree ring bulletin, 1942. v. 9, no. 1, p. 2-8, 2 graphs)

Contains account of the excavations, made during 1940-41 in five major sites on the Kobuk River, which brought significant results in the fields of Eskimo prehistory and tree-ring dating. The investigation was headed by the author, and supported (in 1941) by the University of Alaska. One site was dated actually (Ambler Island site, 1700-1760 A. D.) and four relatively dated in a floating chronology approximately 500 years long. From the results in the Kobuk region, the author concludes "any future archeology in the timbered area can be systematized by actual dating, and can be counted upon to explain the Eskimo culture not as an exclusively specialized coastal unit but as a flexible, highly complex culture adaptable to various environments." *Copy seen:* DSI-M.

29262. GIDDINGS, JAMES LOUIS, 1909- . Diagonal flaking from Kotzebue, Alaska. (American Antiquity, 1948. v. 14, no. 2, p. 127, illus.)

Contains a short note on a tip of a broken thin blade of chalcedony, purchased from an Eskimo with other archeological specimens at Kotzebue.

29265. GILBERT, JOSEPH EVAN JO-SAPHAT, 1915- . Northern Quebec, a new mining area; a study of the territory between Eastmain River and Ungava Bay. Québec, R. Paradis, Printer to the Queen, 1953. 29 p., 31 plates, 2 maps (1 fold.). (Quebec, Province. Dept. of Mines. Geological Surveys Branch. Geological report 56) 53 refs.

Contains a general survey of the Province of Quebec north of 52° N. Means of access, early and recent exploration, physical geography, bedrock and glacial geology are reviewed. The Quebec-Labrador iron ores and mining companies, manganese, and other minerals are also briefly discussed. A list of permanent Hudson's Bay Co. posts, government stations, and missions is included. Text is supplemented by many photographs and a detailed base map of Quebec Province showing some geology (scale: 1 in.: 32 mi.). *Copy seen:* DGS.

29267. GILKEY, ARTHUR K., and others. Progress report, Juneau Ice Field Research Project, Alaska, 1952. New York, American Geographical Society, Jan. 1953. 37 p. sketch map, table. Mimeographed. **Other authors:** E. R. LaChapelle, C. J. Heusser, G. W. Argus, J. B. Howe, D. B. Lawrence, and M. M. Miller.

Contains report on work and observations of a three- to eight-man party (varying during season) led by A. K. Gilkey, during May 17-Sept. 17, 1952. Principal objective was a study of the regimen of Taku Glacier (with emphasis on snow research and the accumulation area) and its postglacial variations. Glaciological work is described in some detail, followed by notes on meteorology, plant ecology, and triangulation. Equipment, clothing, and travel on the ice field are also dealt with. A special three-man group led by M. M. Miller carried on glaciological work in Aug.-Sept. coordinating its work with the main party, and another group under D. B. Lawrence studied areas near Mendenhall, Herbert, and Eagle Glaciers.

(Torfianaf promyshlennost', 1952. t. 29, vyp. 10, p. 13-16, illus., tables, graphs) **Title tr.:** Measures against the freezing of peat deposits and methods of freeing the lump peat mining areas from frost.

"Measures counteracting frost penetration constituted 11 percent of the total cost of mining peat in the Sverdlovsk (56°50' N. 60°38' E.) region. Covering excavations with tree branches increased the thickness of the snow cover by an average of 41.7 percent during the period of 1947-1952 and decreased frost penetration by 10-20 cm. The course of frost penetration in relation to the thickness of the snow cover, and the course of thawing in relation to the number of times thawed layers were removed are indicated graphically. The operations of a grader used in conjunction with a TE-2 excavator and hook are described. The grader, drawn by a tractor, is 3 m. wide and chops frozen ground (4-5 cm. thick) at a rate of 318 cu. m./hr."—SIPRE.

29273. GIRGOLAV, S. S., and T. ÎA. AR'EV. Klinika i lechenie otmorozheniĭ. (Vrachebnoe delo, 1940. god 22, no. 6, column 415-24, 8 illus.) **Title tr.:** Clinical aspects and therapy of frostbite.

Contains an account of the four degrees of frostbite, their pathology, diagnosis and clinical course; difficulties in early diagnosis; special forms of frostbite (frostbite of the face, ears); complications; therapy: warm baths, short waves, surgical intervention; amputation. Treatment of frostbite of all degrees and in successive stages is concisely presented. Cf. No. 5767. **Copy seen:** DSG.

29274. GIRGOLAV, S. S. Novye dannye ob otmorozheniĭakh. (Vestnik

khirurgii, 1937. t. 50, kn. 133-34, p. 42-46) **Title tr.:** New data on frostbite.

Results of investigations carried out in the Dept. of Clinical Surgery at the Academy of War Medicine, Leningrad, by the author (head), Ar'ev, Esberg, and Kazakov, are summarized to a meeting of the Pirogov Surgical Society, Dec. 8, 1936. The action of low ambient temperature is normally checked by body warmth and by low heat conductivity of the tissues; in pathological disturbances caused by cold, time is a decisive factor. The gradual rewarming of frostbitten tissues is found questionable as therapy and rapid rewarming is advocated. **Copy seen:** DLC.

29281. GJESSING, GUTORM, 1906- Culture contact in a Lapp (Same) community: Karasjok in Eastern Finnmark. (Man, London, Aug. 1953. v. 53, p. 116-17)

Contains a rough outline of the situation of the culture contact in the interior of Finnmark based on writer's field work in summer 1950. The geography and the economic development of the region is outlined. Immigration of Finnish agriculturists since 1720 changed the production form from arctic hunting to stock-farming of the Finnish mode; these Finns soon became Lapps themselves. The "Pomor trade" (with Russians from Arkhangel'sk) led to the first breach in the old self-sufficient economy, and the motor road opened through Porsanger to Hammerfest in 1936 was the final blow to the Lappish economic system. Relations of the Karasjok Lapps with Reindeer and Sea Lapps, and with the Norwegian minority is outlined. The Lapp language is now on the decline and everything is working toward the extinction of the Lapp culture.

Copy seen: DLC.

29282. GJESSING, GUTORM, 1906- A note on changing Norwegian attitudes towards the Lapps (Sames). (Man, London, May 1953. v. 53, p. 69-71)

Contains review of social relations between the Sea Lapps and Norwegians; attitudes towards Lapp nationality, character and morals as depicted in Norwegian literature. The suppression of the Lapp language in schools and barring of Lapps from purchasing land (law of 1902), and finally a radical revision of cultural policy towards the Lapps by the government authorities are outlined.

Copy seen: DLC.

29283. GJESSING, GUTORM, 1906- Petroglyphs and pictographs in British

Columbia. (International Congress of Americanists. 29th, New York, 1949. Selected papers, v. 3, *Indian tribes of aboriginal America*. Chicago, 1952, p. 66-79, 18 fig.)

Includes notes on petroglyphs from Tlingit territory of southeastern Alaska (fig. 11). The author finds it impossible however, to determine whether these Tlingit petroglyphs are contemporaneous with, or more recent than the Tsimshian, Kwakiutl, and Bella Coola panels (p. 75).

29285. GLASER, ERIC MICHAEL, and T. S. LEE. Activity of human sweat glands during exposure to cold. (Journal of physiology, Oct. 1953. v. 122, no. 1, p. 59-65, illus.) 10 refs.

Contains an account of experiments on young, healthy men, exposed to controlled ambient temperature, humidity and air movement. Sweating of hands and feet (especially palms and soles) and of the axillae took place when the subjects were shivering, sometimes even before shivering began. No correlation between the degree of cooling and the onset of sweating was observed, and no evidence found for a specific reflex mechanism responsible for sweating in cold environment. It is assumed that the above kind of sweating, and that from emotional or mental

causes are the result of non-specific control of nervous excitation.

Copy seen: DSG.

29286. GLASER, ERIC MICHAEL. The effects of cooling and of various means of warming on the skin and body temperature of men. (Journal of physiology, Sept. 1949. v. 109, no. 3-4, p. 366-79, 3 illus.) 37 refs.

Contains a study on the ways the human organism, after its rectal temperature fell by ca. 1° C., warms up under the following conditions: (1) rest at room temperature; (2) a drink of hot, sweet cocoa followed by rest at room temperature; (3) alternate periods of exercise and rest at room temperature; (4) rest at about 30° C. Seven healthy sailors were used in the experiments. The effect of prior heat or cold acclimatization were also investigated.

Copy seen: DLC.

29287. GLASER, ERIC MICHAEL, and others. Effects of heat and cold on the distribution of blood within the human body. (Clinical science, May 1950. v. 9, no. 2, p. 181-88, illus., table) 15 refs. *Other authors:* F. R. Berridge and Kathleen M. Prior.

Contains a radiographic study of seven normal young subjects. The contour of the liver was found to be larger and the radiographic shadows of the pulmonary vessels wider and more numerous during exposure to heat. The observations suggest that lungs and liver contain more blood when the body surface is cooled.

Copy seen: DSG.

29288. GLASER, ERIC MICHAEL, and R. V. H. JONES. Initiation of shivering by cooled blood returning from the lower limbs. (Journal of physiology, July 1951. v. 114, no. 3, p. 277-82, illus., table) 16 refs.

Contains an account of tests performed on nine healthy men, having their legs immersed in water of 7°-12.5° C. It was demonstrated that increasing the blood flow through the muscles of the chilled limbs causes more cooled blood to pass from these limbs to the body, and in turn activates some center or receptors of shivering.

Copy seen: DSG.

29289. GLASER, ERIC MICHAEL, and G. R. HERVEY. Swimming in very cold water. (Journal of physiology, 1951. v. 115, p. 14P) 3 refs.

Contains a summary of observations on three men of different fitness and

swimming ability, who, dressed, swam in water of 2° C. The onset of gasping; duration of swim; calculated and observed loss of calories, and body temperature; skin reaction; etc., are briefly discussed.

Copy seen: DSG.

29292. GLENN, WILLIAM WALLACE LUMPKIN, 1914-, and others. Treatment of frostbite with particular reference to the use of adrenocorticotrophic hormone (ACTH). (New England journal of medicine, Aug. 7, 1952. v. 247, no. 6, p. 191-200, 10 fig.) 18 refs. *Other authors:* F. B. Maraist and O. M. Braaten.

Contains a case report and detailed study of two frostbitten patients treated with ACTH (apparently the first so treated), and an account of experimental

frostbite in rabbits treated as above, or with the rapid thawing method. The effect of ACTH in the patients was doubtful and of no significance in the rabbits; rapid thawing in the latter confirmed the efficacy of this method claimed by others. A brief addendum on an additional case, this one treated by the rapid thawing method is attached; as it was a mild case no conclusions are made as to the effectiveness of the method.

Copy seen: DLC.

29293. GLENNEN, EDWARD J. The problems of permafrost. (Western construction news, Apr. 1953. v. 28, no. 4, p. 72-73, illus.)

"Site selection to permit a large percentage of construction on non-frost-susceptible materials saves construction time. The characteristics of underlying soils must be accurately determined, the depth of exploration varying with the size and importance of the building. It is assumed that the initial volume reduction which would occur when heat from the building thaws the underlying material, will be made when the area under a building is thawed and that no additional settlement will occur. Thawing by means of steam points and compacting by blasting the permafrost are recommended. Overlying soil not suitable as foundation material is usually removed. Pile foundations used when a thick layer of frost-susceptible material is present are discussed."—SIPRE.

29296. GLOBUS. Schimkjewitschs Reisen bei den Amurvölkern. (Globus, 1898. Bd. 74, p. 251-56, 267-73, 21 illus.) **Title tr.:** Shimkievich's travels among the peoples of the Amur.

Contains description (apparently based on Pëtr Shimkievich's own report) of peoples met on his travels in the Amur Region in 1893. The Tungus (Orochi) on the Bureya River, their physical appearance, clothing, hunting, and trade with Yakut merchants are described. Another group of reindeer Tungus was encountered on the Kerbi River, and their practice in bear-killing and disposal of the skull, their riding and milking of reindeer are noted in some detail. The traveler further visited the Gold fishing people whose fish-skin clothing, use of dogs, customs and beliefs are described. His observations on a wedding party and a shamanistic performance are given. Photographic illus. show types and scenes from the life of Buryats, Tungus, Yakuts, and Golds.

Copy seen: DLC.

29297. GLOBUS. Eine Ueberwinterung auf Novaja Semlja. (Globus, 1873. Bd. 24, p. 284-86) From the Hammerfest paper *Finmarksposten*. **Title tr.:** A wintering on Novaya Zemlya.

Contains account of the experience of seven Norwegian seamen who abandoned their fishing ship *Freia* beset in ice off Novaya Zemlya, attempted to reach Vaygach Island in a small boat, and failed. After hazardous traveling, they found Russian-speaking Samoyeds (six adults and one child) at Rusanovo for seal and walrus hunting, and wintered (1872-73) with them comfortably. The Samoyeds, they found, kept free of scurvy. They had much exercise, drank fresh reindeer blood and ate raw meat; they were able to reckon time from stars and sun, and had a calendar stick with carved marks. In mid-June 1873, the Norwegians reached Vaygach, and found another settlement of friendly Samoyeds who took them south by reindeer sledge. Of the seven seamen, four reached home, one had died in a snow storm, and two

had remained with the Samoyeds, one on Novaya Zemlya, and one on Vaygach Island.

29301. GODDARD, PLINY EARLE, 1869-1928. Similarities and diversities within Athapaskan stocks. (International Congress of Americanists. 22nd, Rome, 1926. Atti, pub. 1928, v. 2, p. 489-94)

Includes notes on the possibility of a relationship of Athapaskan with the Tlingit and Haida languages (suggestions having been made by Boas and Sapir). The morphological resemblance is striking, but the lexical connection is unsatisfactory.

Copy seen: DSL.

29302. GODFREY, W. EARLE. Notes on Ellesmere Island birds. (Canadian field-naturalist, Apr.-June 1953. v. 67, no. 2, p. 89-93) 7 refs.

Contains an annotated list of 20 species. Collections were made Apr.-Sept. 1951, on west and northeast coastal areas of

Ellesmere at Eureka (80°13' N. 86°11' W.) by J. S. Tener, and in the Alert region (82°29' N. 62°15' W.) by S. D. MacDonald. Specimens from older collections were also examined. "Affinities of the Ellesmere Island birds with the Greenland avifauna are noteworthy, involving breeding range extensions of such Old World races as *Arenaria interpres interpres*, *Calidris canutus canutus*, and probably *Acanthis hornemanni hornemanni*, into Canada." **Copy seen:** DGS.

29303. GODSON, WARREN L. Map projections for polar latitudes. (Canadian journal of technology, 1953. v. 31, no. 1, p. 29-33, 3 tables) 3 refs.

The general properties and defining relations of the Lambert conformal conic projection, and its limiting case, the Polar Stereographic projection, are examined in relation to requirements for aeronautical and meteorological purposes in polar regions. The Polar Stereographic projection is compared with the recently modified Lambert projection. It is claimed that data show a Polar Stereographic projection with minimum mean scale error to remain the most suitable polar projection available if conformality is a major requirement.

Contains an account of local therapy of second and third degree frostbite with a sulfonamide preparation (Marfanil-Protabin powder). Quicker healing, greater cleanliness and reduction of infection are claimed. The patients were injured soldiers; pre-treatment procedures as well as therapy of sequelae are also discussed and one case history included.

29311. GOL'DMAN, L. M. Aërofotos'emka i geografiā. (Geografiā v shkole, 1951, no. 5, p. 28-35, 5 illus.) **Title tr.:** Aerial surveying and geography.

Contains popular description of aerial surveying and its application in modern cartographic work, particularly in regions difficult of access: northern coast of Siberia, tundras and arctic islands. In the tundra zone, aerial photography is used in identification of different types of vegetation. In the forest area, it aids in delimitation of coniferous and deciduous zones, of cut-out and burned-over spots, even in determination of diameter and height of trees, their age, and quantity of timber per area unit, etc.

Contains suggestions for first treatment of frostbitten soldiers in the field: massage, followed by an ointment which contains histamine as vasodilator; cod-liver oil as source of vitamin A and D; picric acid as antiseptic; camphor, lanoline and vaseline.

Copy seen: DSG.

29319. GOLLAN, FRANK, 1909-, and others. Studies on hypothermia by means of a pump-oxygenator. (*American journal of physiology*, Nov. 1952. v. 171, no. 2, p. 331-39, illus.) 24 refs. *Other authors:* Peter Bloss and Howard Schuman.

Contains an account of experiments with dogs whose blood has been cooled, or rewarmed, while circulating through a

pump-oxygenator. Blood pressure, respiratory rate, heart rate and electrocardiograms resemble those of immersion hypothermia; differences, and special precautions to be taken, are also discussed. All animals cooled to 29° C. survived; mortality rose between 29° and 27° core temperature; all animals died below 27° C. of ventricular fibrillation as a complication of cardiac catheterization.

Meleshko, and A. K. Chaurov. *Title tr.:* Hydrological materials of sea coasts of the Soviet Arctic according to observations of polar stations.

"The ice régime and the structure of the ice cover of the Yugor Strait (Yugorskiy Shar Proliv) are described for the period 1913-1934. Data are given on the drift, offshore ice, duration of freezing, open water and maxima of ice cover thickness. The thickness of the ice cover, direction and velocity of ice movement at various depths in the Vil'kitskiĭ Strait (Borisa Vil'kitskogo Proliv) were measured. The friction between water and ice is pronounced near the coast. The winter hydrological régime of the southern part of the Chaun Bay is influenced by the Chaun River. Iso-curves of water salinity and temperatures in this area are indicated."—SIPRE. The four papers comprising this volume were previously listed in this Bibliography under their authors' names as No. 5909, No. 3849, No. 11231, and No. 3020.

"A device used for the measurement of ice thickness at Cape Shmidt (68°58' N. 179°24' E.) is described. A pipe of length greater than the maximum winter ice thickness was frozen into the ice at the beginning of winter. A rod passing through the pipe has a disc at the lower end. The pipe is filled with a mixture of kerosene and petroleum to prevent freezing. A cm.-measuring rod was installed over the ice cover. The disc rises as the ice thickness increases, indicating the increase on the rod."—SIPRE.

(Akademiia nauk SSSR. Doklady, 1948, nov. seriia, t. 60, no. 3, p. 485-88)

Title tr.: Ecological associations of early blooming plants in larch forests of the mountains of Siberia.

Of such plants, always present in Central Siberian forests where *Larix sibirica* is predominant, typical herbs are noted: a group of anemones (*Anemone altaica*, *A. coerulea*, *A. reflexa* and *A. jenseiensis*), *Corydalis bracteata*, *C. halleri*, *Erythronium sibiricum*, and others; their areas and life cycle are indicated. A few members of the plant association, especially *Anemone altaica* and related species, form an arctic group spreading to northern regions of Siberia. The origin of this group and its phylogeny are discussed.

GORDON, ERIC VALENTINE, 1896-, see Shetelig, H., and H. Falk. Scan. archeol. 1937. No. 31946.

29337. GORDON, GEORGE. The mechanism of the vasomotor reflexes produced by stimulating mammalian sensory nerves. (Journal of physiology, June 1943, v. 102, no. 1, p. 95-107, 8 diagrs.) 10 refs.

Contains a report on electrical stimulation applied to the central end of the cut posterior tibial and other mixed nerves in cats. When the nerve was blocked by cold or freezing (-4° to +10° C.) the depressor effect was abolished first, and the pressor reflex often became larger than before. **Copy seen:** DLC.

29338. GORDON, MARVIN L. An immediate response of the demedullated adrenal gland to stress. (Endocrinology, July 1950, v. 47, no. 1, p. 13-18, tables) 14 refs.

Insulin, histamine or exposure to cold for one hour produced a marked decrease of ascorbic acid concentration in the demedullated adrenals of female rats; histamine produced eosinopenia four hours after administration. It is concluded that the adrenal medulla is not essential for activating the pituitary by stressing agents. **Copy seen:** DSG.

29339. GORETSKIĬ, G. I. Dokazano li sushchestvovanie Onezhsko-belomorskogo pozdnelednikovogo soedineniia? (Vsesoiuznoe geograficheskoe obshchestvo. Izvestiia, Mar.-Apr. 1951, t. 83, p. 186-93, tables) 20 refs. **Title tr.:** Is the existence of a late-glacial Onega-White Sea connection proved?

The problem of an ancient connection of Lake Onega with the White Sea by

the so-called "Karelian Sea" was raised 85 years ago. New paleontological discoveries by Soviet scientists in Karelia in 1928-33, seemed to offer a positive solution of the problem. On the basis of extensive literature, the author critically evaluates this evidence, and asserts that the fossil marine fauna and flora found in Karelia is of more ancient origin, or is too scarce and mixed with fresh-water relics to be regarded as a decisive argument for the existence of a former sea. He concludes that the hypothetical connection of Onega Lake with the northern sea is paleontologically not yet proved.

Copy seen: DLC.

29340. GORETSKIĬ, G. I. Dolednikovai kora vyvetrivanii na Kol'skom Poluostrove. (Priroda, 1938, no. 4, p. 101-102) **Title tr.:** The pre-glacial crust of weathering in the Kola Peninsula.

Contains notes on pre-glacial crust of weathering discovered on the bank of Tuloma River, 12 miles from Kola. Quaternary morainic deposits, weathered rock formations are described, and chemical analysis given of alluvial clay underlying the morainic deposits. The geologic age of the Tuloma valley and Kola fiord is discussed.

29341. GORETSKIĬ, G. I. Neoliticheskie stoianki v raione g. Kemi. (Akademii nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1941. vyp. 9, p. 111-14) **Title tr.:** Neolithic sites in the region of the town of Kem.

Contains report on excavations made by the author in 1937 near the town of Kem. The first three neolithic sites on terraces of the Kem River (about 8-10 km. from the White Sea) were rich in comb-ornamented potsherds, scrapers and sharp flakes of quartz, some obviously man-made, also other knife-like implements of gray stone. The potsherds belong to the third period of comb ceramics following the classification of Ailio (about 1600-1900 B. C.). Two other sites (nos. 4 and 5) contained also quartz flakes and potsherds belonging to the second period of comb ceramics. Investigation of the clay, its composition, percentage of pollen and spectrum analysis show that geologically, sites 4 and 5 belong to the sub-Boreal period, transgression Tapes in northern Fennoscandia. On another terrace of some 18-40 m. height, many scrapers and

flakes of quartz, but no ceramics, were found, and the cultural layer was not apparent. This was, perhaps, a mesolithic site (the so-called "arctic paleolithic"?), or merely a stone worksite of people living on the lower terraces.

Contains a report on the levels of serum protein-bound iodine, and of the basal metabolism of seven subjects, before, during and after a winter (1948) sojourn at Churchill, Canada. None of them increased during exposure to the arctic cold, which suggests that thyroid stimulation did not occur. Protein-bound iodine determined in the serum of 17 Eskimos of Southampton Island and Chesterfield Inlet during the summer was appreciably higher than that in normal persons in Massachusetts, suggesting hyperactivity of their thyroid glands.

Theses (12) of a paper delivered to the Second All-Union Geographical Congress, Leningrad, 1947. New ideas concerning the formation of soils in the Arctic, as developed by Dokuchaev's Russian school of soil science are emphasized. Expansion of tundras into polar deserts, and of forests into tundras are recognized as the main factors of the arctic soil formation. The necessity for dividing tundras into various soil zones is pointed out.

Jahrg. 23, Heft. 21-26, p. 230-34, 4 fig., 3 tables) 2 refs. **Title tr.:** Cold resistance and nutrition, 2. The influence of vitamin A and B intake on resistance to cold.

Contains an account of experiments with rats, fed vitamin-deficient diets and exposed to an environmental temperature of +1° C. Body temperature and survival time were registered. Lack of vitamin A and B-complex lowered considerably cold resistance (measured by survival time and compared with normally fed controls). A minimal supply of these vitamins increased cold resistance, but not to an optimal degree; the latter was only obtained by administration of abundant amounts of vitamins. However, cold resistance could not be raised beyond a certain point by further increasing the vitamin supply. For parts 1, 3-4 of this study, see under Lang, Karl, and W. Grab.

Contains a description of glacial and postglacial features in the Kuvnilik Fjord area, north of Frederikshåb Glacier, west coast of Greenland, at about 62°45' N., the result of field work by the author with the Geological Survey of Greenland party in summer 1952. Ground and terminal moraines are discussed, the characteristic type of ground moraine being isolated boulders with sharp edges. Terraced and unterraced lateral melt-water deposits were found. The last direction of continental ice movement was from about N 75° to 80° E; since

breakup of the inland ice glaciers have been controlled by underlying topography. Effects of ice erosion are roches moutonnées with triangular pits, and bedrock slopes showing glacial polish. Two cirques, formed before the last ice advance, may indicate an earlier glaciation, or possibly only an introductory phase of the last glaciation.

29361. GRAHAM, MICHAEL. English fishery research in northern waters. (Arctic, Dec. 1953. v. 6, no. 4, p. 252-59, illus., chart, 2 graphs) 4 refs.

Contains description of the research vessel *Ernest Holt* and the hydrographical and biological program carried out in the Barents and Greenland Seas and Svalbard waters. Approximately seven voyages of 29 days each are made annually, four scientists aboard on each voyage. Observations are worked up in the laboratories of the ship (which resembles a commercial arctic trawler) by the end of each voyage, and form the basis of planning the next. The main fishery investigated has been the Bear Island Shelf. Two hydrographic sections set up to observe currents, water densities, etc., are (1) LoppHAVet (northern Norway)—Kapp Bull (Bjørnøya) and (2) Bjørnøya westward to deep water.

29363. GRAND, NICHOLAS G., and others. The transplantability of a mouse adenocarcinoma frozen in liquid nitrogen after treatment with ethylene glycol. (Biodynamica, Dec. 1952. v. 7, no. 140, p. 133-39, table). 5 refs. Other authors: J. F. Keane Jr., W. H. Bauer, and B. J. Luyet.

Contains a report on experiments with small transplants measuring about one cu. mm. When glycol-treated prior to freezing, they produced tumors in 92.2 percent of the inoculated mice; when frozen but not glycol-treated, only in 30.6 percent of the animals. Glycol-treated, not frozen controls produced 98.7 percent takes, and untreated controls 98 percent. The survival of 30.6 percent of transplants frozen without protective treatment supports the concept that, in tumors, a few cells survive freezing.

29367. GRANT, RONALD THOMSON, and E. F. BLAND. Observations on arteriovenous anastomoses in human skin and in the bird's foot with special reference to the reaction to cold. (Clinical science, 1931. v. 15, no. 4, p. 385-407, 9 fig., 4 illus., 7 tables) 13 refs.

Contains an account of observations and experiments showing that in man as well as in the hen and duck, the soles of the feet are rich in arteriovascular anastomoses and also react very strongly to cold. In the human palm the situation is similar. The anastomoses not only take in vascular reaction to cold but are

also believed to be responsible for the increased blood flow in the extremities.

Copy seen: DSG.

29368. GRANT, RONALD THOMSON, and others. Observations on the vessels and nerves of the rabbit's ear with special reference to the reaction to cold. (Clinical science, 1932. v. 16, no. 2, p. 69-101, 12 fig.) 11 refs. *Other authors:* E. F. Bland and P. D. Camp.

Contains a study on lightly anesthetized animals with ears exposed to 20° and 30° C. The temperature reaction resembles that observed in the human finger and consists of repeated rises and falls in temperature during cooling. Vascular dilatation affected chiefly the arteries and arteriovenous anastomoses with involvement of the capillaries, and was not confined to the cooled part only. It seems to differ from that in man by being largely independent from the nervous system. The vascular reaction is not due to release of a H-substance during cooling; rather the action of a choline-like substance is suggested.

Contains evaluation of Petitot's work *Quinze ans sous le cercle polaire*, 1889 (q. v.). Bibliography of G. Gravier's printed works, including five arctic papers, is added. **Copy seen:** DLC.

29376. GRAY, EDWARD Le BRETON, 1905-, and others. Nutritional requirements for men at work in cold, temperate and hot environments. (Journal of applied physiology, Oct. 1951. v. 4, no. 4, p. 270-75, tables) 4 refs. Other authors: F. C. Consolazio and R. M. Kark.

Caloric output for a standard amount of work performed at a constant temperature increased each time when clothing was changed from a desert to a temperate type, or from temperate to arctic type. Caloric output for a standard amount of work performed in a given outfit of clothes decreased each time by ca. 2 percent when temperature rose from -15° F. to 60° F., and from 60° to 90° F.

Copy seen: DSG.

29377. GRAYBIEL, ASHTON, 1902-, and CLYDE J. DAWE. Auricular fibrillation following hypothermia. (U. S. Armed Forces medical journal, Apr. 1950. v. 1, no. 4, p. 418-21, illus.) 9 refs.

Contains a case report of a man, 32, white, who accidentally fell and remained in cold water (55°-58° F.) for nearly six hours. Prior to immersion he had drunk half a pint of whisky. Auricular fibrillation was among the clinical findings.

Copy seen: DSG.

29378. GRAYSON, JOHN. Cold and warmth vasoconstrictor responses in the

skin of man. (British heart journal, Apr. 1951. v. 13, no. 2, p. 167-76, 6 fig., 3 tables) 7 refs.

Contains a report on changes in blood flow of the skin as indicated by venous occlusion plathysmography and temperature measurements. Removal of cold stimulus produced considerable skin vasodilation in normal subjects without significant change in rectal temperature. Subsequent exposure to temperatures colder or hotter than the body caused reflex vasoconstriction in the skin, which is diminished or abolished by high rectal temperatures. Some deviations from this behavior in apparently normal men, and "cold hypersensitivity" in Raynaud's disease and acrocyanosis, are also discussed.

Copy seen: DSG.

29379. GRAYSON, JOHN. The sensitivity of the cold and warmth vasoconstrictor responses. (Journal of physiology, 1950. v. 111, p. 39P)

Contains an abstract on experiments made with 25 subjects. When completely covered with blankets in a cold environment, an exposed finger showed a temperature rise to about 35° C., without rise of rectal temperature. Subsequent exposure of the head and an arm produces a drop of about 2° C. in the finger. Further vasoconstrictor responses were elicited by exposure of the trunk or limbs. Raising the rectal temperature always reduced the sensitivity of these responses.

29386. GREENAWAY, KEITH ROGERS, 1916- . Navare '52. RCAF's top arctic navigator tells of northern flights in Avro-converted Lancaster aircraft. (Jet age, summer 1952. v. 1, no. 2, p. 12-13, illus.)

Contains an account of a series of flights made between Apr. 27 and May 6, 1952 from Summerside (Prince Edward Island) via Goose Bay to Resolute on Cornwallis Island (74°42' N. 94°34' W.), thence over the arctic islands and waters to the North Pole. The flights, made each spring by the best navigators of the Royal Canadian Air Force Specialist Navigation School at Summerside, covered this year 18,000 nautical miles in two Lancasters. In addition to practicing and assessing new techniques in arctic navigation the participants set astronomical control points and checked elevations. Some data on previous flights are given.

Copy seen: CaMAI.

29387. GREENAWAY, KEITH ROGERS, 1916- . Radar as an aid to air navigation in the Arctic. (Institute of Navigation, London. Journal, 1951. v. 4, no. 4, p. 399-401, illus.)

"Summary of a paper presented to the Canadian Institute of Navigation at a meeting held in Montreal on 22 September 1950." *Contains* a discussion of the use of search radar to supplement or take the place of astronomical navigation. Cloud cover restricts or prevents astronomical observations on most arctic flights except in winter. Radar provides continuous contact with the ground and can be used both for the determination of drift and ground speeds and for pinpointing. These two techniques are discussed in turn. In the first, the bearings of a target such as an ice lead, pressure ridge, or prominent topographic feature are recorded as the target crosses the radar scope, or at known time intervals. Dead reckoning may be kept in this manner with a minimum of other navigational aid. In pinpointing, the dead reckoning position is computed, and a topographic map consulted. Features are noted on the map that are liable to be present on the radar picture, and an attempt is then

made to interpret the picture. Accurate maps and skillful interpretation are necessary for this method. Interpretation of the radar picture for various types of topography and at different seasons of the year is discussed. In winter, the snow and ice cover obscures many topographic features on the picture which may easily be interpreted in summer.

29388. GREENE, RAYMOND. The immediate vascular changes in true frostbite. (Journal of pathology and bacteriology, July 1943. v. 55, p. 259-67, 10 illus.) 17 refs.

Contains a review of studies on the physiological and pathological effects of moderate cold (chilling) and of actual freezing (frostbite), followed by an investigation on experimental frostbite in mice. The affected parts (tails) were studied microscopically at various intervals after exposures of varying duration. Damage to the blood vessels, transudation and silting up of afferent vessels by stranded erythrocytes, but no true thrombosis, were observed. Abstracted by J. R. Learmonth in *Bulletin of war medicine*, Dec. 1943, v. 4, no. 4, p. 199-200.

Copy seen: DSG.

29389. GREENE, RAYMOND. The prevention and treatment of frostbite. (Practitioner, London, Jan. 1942. v. 148, no. 883, p. 38-43)

Contains an account of the symptoms of frostbite, trench foot, shelter foot, etc.; causes of frostbite, objective and subjective; prevention (proper clothes and shoes, warm, sufficient food, etc.); therapy (slow rewarming, gentle massage, etc.).

Copy seen: DSG.

29390. GREENE, RAYMOND. Trenchfoot. (*In:* Inter-Allied Conferences on War Medicine, London, 1942-1945, pub. 1947. p. 140-43)

Contains information and data on trench-foot casualties in World War I; on avoiding it through proper discipline, preliminary training in cold weather, proper clothing (and its characteristics), prevention of dampness in clothing by frequent changing, prevention of circulatory stagnation, proper food, proper trenches, etc.

Copy seen: DLC.

GREENE, RAYMOND, *see also* Learmonth, J. R., and *others*. Discussion immersion injuries . . . in wartime. 1948. No. 30363.

29391. GREENFIELD, ARCHIBALD DAVID MANT, and *others*. The average internal temperature of fingers in cold water. (Clinical science, London, Aug. 31, 1950. v. 9, no. 3, p. 349-54, 5 fig., (table) 2 refs.) *Other authors*: J. T. Shepherd, and R. F. Whelan.

Contains description of a calorimetric method for determining the average internal temperature of the finger, followed by an investigation on the relationship of this temperature to the blood flow through the finger during vascular reaction to local cold. The temperature gradient in the finger is also discussed.

Copy seen: DSG.

29392. GREENFIELD, ARCHIBALD DAVID MANT, and **J. T. SHEPHERD**. A controlled temperature plethysmograph for the index finger. (Journal of physiology, 1950. v. 111, p. 40P-41P. fig.)

Contains a description of a plethysmograph for observations at controlled temperatures and with heads of pressure up to 35 cm. of water. The principles and the ways the apparatus works are also explained.

Copy seen: D.L.C.

29393. GREENFIELD, ARCHIBALD DAVID MANT, and *others*. The effect of local infiltration of anesthetics on the response to cold of the circulation through the finger tip. (Journal of physiology, 1951. v. 115, p. 44P) 4 refs. *Other authors*: J. T. Shepherd and R. F. Whelan.

Contains a summary of a reinvestigation of the effects of infiltration of novocain and other local anesthetics on the cold response. The temperature of the water, in which the finger was immersed prior to exposure to cold, largely determined the vasomotor response in the finger.

Copy seen: DSG.

29394. GREENFIELD, ARCHIBALD DAVID MANT, and *others*. Heat loss from toes and forefeet during immersion in cold water. (Journal of applied physiology, July 1951. v. 4, no. 1, p. 37-45, illus., tables) 9 refs. *Other authors*: G. A. Kernohan, R. J. Marshall, J. T. Shepherd, and R. F. Whelan.

Contains a study on heat loss in water of 0°-6°, 6°-12°, 12°-15° C. of com-

fortably warm or heated subjects. When the toes of a comfortably warm subject are placed in water of 0°-6° C., there is almost complete arrest of circulation followed by a vasodilation and then by alternating periods of vasoconstriction and vasodilatation. Similar but smaller responses follow immersion at 6°-12° C.; there is no initial arrest of the circulation or cold vasodilatation at 12°-15° C. (No. 22204).

Copy seen: DSG.

29395. GREENFIELD, ARCHIBALD DAVID MANT, and *others*. The loss of heat from the hands and from the fingers immersed in cold water. (Journal of physiology, Feb. 1951. v. 112, no. 3-4, p. 459-75, illus., tables) 10 refs. *Other authors*: J. T. Shepherd and R. F. Whelan.

Contains a study of heat loss from the hand, fingers and fingertips to water of 0°-6° C., by a new method described. There was very little heat loss from the circulating blood during the first five minutes; thermal loss per surface unit was largest in the fingertips, smallest in the hand and is generally reduced when the subject is cold and increased when he is hot. The cooling effect of the returning venous blood, size of blood flow, pain, etc. are also discussed.

Copy seen: DSG.

29396. GREENFIELD, ARCHIBALD DAVID MANT, and *others*. The part played by the nervous system in the response to cold of the circulation through the finger tip. (Clinical science, Aug. 1951. v. 10, no. 3, p. 347-60, 7 fig.) 9 refs. *Other authors*: J. T. Shepherd, and R. F. Whelan.

Contains a report on a reinvestigation of the problem by quantitative methods. It is concluded that "the response to cold does not depend on the integrity of somatic sensory nerve fibres, although when they are intact the response is much larger than when they are not." The results are discussed in relation to discrepancies of some early investigations.

Copy seen: DSG.

29397. GREENFIELD, ARCHIBALD DAVID MANT, and *others*. The part played by the nervous system in the response to cold of the circulation through the finger tip. (Journal of physiology, Sept. 1951. v. 115, no. 1, p. 10P-11P) 3 refs. *Other authors*: J. T. Shepherd, and R. F. Whelan.

Contains an abstract of observations

on six cases of peripheral nerve injury, all of whom had complete anesthesia of at least one finger, and in three of whom a peripheral nerve had been completely divided. The examinations showed that it is unnecessary to claim a local axon reflex as the basic mechanism of cold vasodilatation; however, the response to cold is much improved when the somatic nerves are intact. **Copy seen:** DLC.

29398. GREENFIELD, ARCHIBALD DAVID MANT, and J. T. SHEPHERD.

A quantitative study of the response to cold of the circulation through the fingers of normal subjects. (Clinical science, Aug. 31, 1950. v. 9, no. 3, p. 323-47, 12 fig., plate, table) 22 refs.

Contains account of observations made with the venous occlusion plethysmograph supplemented by calorimetric observations. Heat exchange between the finger and environment; blood flow through the finger; range of response to cold, and the problem of pain due to cold are studied and discussed.

Copy seen: DSG.

29400. GREILING-KNOLL, URSULA. Berufung und Berufungserlebnis bei den Schamanen. (Stuttgart. Linden-Museum. Tribus, Jahrbuch, 1952-53. Neue Folge, Bd. 2-3, p. 227-28) 26 refs. **Title tr.:** Vocation and the vocational experience among the shamans.

Contains an investigation based on the literature, of the social and psychological aspects of a person's taking over the duties of a shaman. The functions of a shaman may be inherited, or an individual may receive the call from supernatural powers directly through a spirit, usually in animal's shape, or get the vocation from inner compulsion, or by seeing signs of omen. The office of shaman, however, can be also acquired by buying access into the class of shamans, although vocation is essential. The personal reactions vary: some individuals are glad to be selected to this office by the spirits, others are anxious; it is possible not to respond to the call, it is dangerous, however, to reject the wish of spirits. Many references are made to shamanism among the Paleo-Siberians, Eskimos and Ural-Altaic peoples. **Copy seen:** DLC.

GRIFFIN, DONALD REDFIELD, 1915- . The comparative physiology of Alaskan bird migrations. See Alaskan Science Conference, Nov. 1950. Proceedings, 1951. No. 20117.

29409. GRIFFIN, DONALD REDFIELD, 1915- , and others. The effects of cold and rate of ascent on aero-embolism. (Journal of aviation medicine, Feb. 1946. v. 17, p. 56-66, 2 fig., 3 tables, 10 refs.) Other authors: S. Robinson, H. S. Belding, R. C. Darling, and E. S. Turrell.

Contains an account of observations on 18 men aged 18-40, during simulated ascents in a refrigerated altitude chamber. Men kept comfortably warm suffered much less from the bends (aero-embolism, decompression sickness, caisson disease) than they did when they were definitely cold. This partial protection from the bends occurred either when the experiments were conducted in warm air or when the subjects wore electrically heated clothing. Heavy (alpaca) but unheated clothing however did not reduce the incidence of bends from the rate found in the subjects kept cold; these alpaca-clad subjects were comfortable but chilly, and probably vasoconstricted.

29410. GRIFFIN, DONALD REDFIELD, 1915- . Physiological thermodynamics of arctic animals. (In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 93-97, 2 fig.)

Contains an introductory discussion of heat production, insulation, and the regulation of both in animals and man, followed by an account of measurements of temperature gradients (and estimated heat flow) in the fur of huskies and in that of a snowshoe hare.

Copy seen.: CaMAI; DLC.

29411. GRIFFIN, JAMES BENNETT, 1905- . A preliminary statement on the pottery from Cape Denbigh, Alaska. (In: *Asia and North America, trans-Pacific contacts*, pub. as: Society for American archaeology. Memoirs, no. 9;

supplement to American antiquity, Jan. 1953. v. 18, no. 3, pt. 2, p. 40-42)

Contains short examination of the ceramic material excavated by Giddings in 1948-49 at the site of Iyatayet on Cape Denbigh, Norton Sound, northwestern Alaska.

The pottery was found in levels above the flint complex and separated from the latter by a sterile zone. The top layers contain some artifacts and ceramic materials similar to nearby finds dated roughly 1500-1600 A. D., and some suggestive of early Punuk. The lower layers represent a significantly new find which author terms Norton ceramic complex. Its relative age is indicated by radiocarbon-dating of roughly 50 B. C. to 500 A. D. and by similarity to Ipiutak, early south Alaskan and Dorset. Its features are discussed comparatively with Eurasian and eastern North American materials, and further investigations called for, to locate ceramic sites in the geographic gap between eastern and western finds.

(Problemy fizicheskoi geografii, 1939. no. 7, p. 3-54, 7 tables) 60 refs. *Title tr.:* Essay in characterization of the basic types of physical-geographic environments, part 3. Types of physical-geographic environment of dry land of the arctic belt.

The climate of the arctic "belt" is characterized by very low annual air temperature, negative balance of radiant heat and positive water balance. Mean air temperature of summer is never higher than +5° C. Roughly this area comprises Europe and western Siberia north of 75° N. lat. and eastern Siberia north of 70° N. lat. The temperature conditions of the area are connected with a great loss of heat reflected from ice and snow cover of the Arctic Basin. The coldest months are Jan. and Feb. As a consequence of the lack of insolation, the difference between their temperature is small. In summer and winter, the daily variations are also small. The relative humidity for the

entire area is very high, 80-90 percent. Cloudiness and atmospheric precipitations frequent but in small quantities characterize the area. A brief treatment of this subject was pub. in 1928 (*see* Arctic Bibliography, No. 22233). Summary in French. *Copy seen:* DLC.

29416. GRIGORE'EV, N. F. Geologicheskii ocherk stoľanki Kullaty. K morfologii i genezisu Lenskikh terras v ralone r. Kullaty-ŭrėkh, Ordzhonikidzevskii r-n, ĬASSR. (In: Okladnikov, A. P. 29419. GRIGOROV, I. P. Ischezazhshchie ostrova. (Priroda, 1946. no. 10, p. 65-68) *Title tr.*: Disappearing islands.

Contains notes on the disappearance of Vasilevskiy Island in Laptev Sea. It had been explored and put on the map by Lt. Anzhu in 1823; and was visited by the expedition on the *Vatgach* in 1912, when the process of its destruction was noted. The island was not to be found in 1936. The same process is taking place on Semenovskiy Island in the same area of Laptev Sea. The author who studied this problem for a long time is of the opinion that the heat of the sun and the activity of warm sea water in the summer time are the chief factors in the destruction of these islands. Under the influence of such forces, the fossil ice which forms an important component of these arctic islands starts to degenerate, and its degradation leads to a rapid erosion. The warming up of the climate in the Arctic is a contributing factor in this process. *Copy seen*: DLC; MH.

29431. GROGAN, K. C. Treatment plant operation at Giant Yellowknife. (Canadian mining and metallurgical bulletin, Apr. 1953. v. 46, no. 492, p. 210-21, illus., diagrs., 3 tables) Also pub. as: Canadian Institute of Mining and Metallurgy. Transactions, 1953. v. 56, p. 88-99.

Gold ore from Giant Yellowknife Mine, west side of Yellowknife Bay, Great Slave Lake, is complex; gold occurs closely associated with other minerals. Ore dressing investigations began in 1944 and plant construction in 1947. Processes in recovery of gold include fine grinding, flotation, roasting of the flotation concentrate, subsequent cyanidation of the calcine, and refining. These, with equipment used, are described in turn. Brief discussion of the paper appears in the same issue of the journal, p. 338.

29432. GROSSE-BROCKHOFF, FRANZ, and W. SCHOEDEL. Das Bild der akuten Unterkühlung im Tierexperiment. (Naunyn-Schmiedeberg's Archiv für experimentelle Pathologie und Pharmakologie, June 1943. Bd. 201, no. 5, p. 417-42, 10 fig., 3 tables) 46 refs. **Title tr.:** The picture of acute hypothermia in animal experiments.

Contains a study of dogs made hypothermic by immersion in water of 6° - 8° C. Changes in body temperature, in energy metabolism, breathing, circulation, sugar and lactic acid levels of the blood, the alkaline reserve and arterial oxygen saturation, are described. It is concluded that changes of metabolism or

of hormonal regulation play only a minor role in causing death from hypothermia; the main causes of it appear to be paralysis of the medullary centers and disturbances in cardiac excitability. In cases of chronic hypothermia, exhaustion furnishes an additional, contributory factor. Abstracted by R. Green in *Bulletin of war medicine*, May 1944, v. 4, no. 9, p. 508. **Copy seen:** DSG.

29433. GROSSE-BROCKHOFF, FRANZ, and W. SCHOEDEL. Tierexperimentelle Untersuchungen zur Frage der Therapie bei Unterkühlung. (Naunyn-Schmiedeberg's Archiv für experimentelle Pathologie und Pharmakologie, June 1943. Bd. 201, no. 5, p. 457-67, 8 fig.) 12 refs. **Title tr.:** Experimental studies with animals on the problem of therapy of hypothermia.

Contains a study on the therapeutic value of adrenalin, veritol, sympathol, atropine, glucose and rapid rewarming on hypothermic, anesthetized dogs. Of the substances, only atropine and glucose had a slight and passing beneficial effect. Rapid rewarming in water of 40° C. led in nearly all cases to recovery. Abstracted by R. Greene in *Bulletin of war medicine*, May 1944, v. 4, no. 9, p. 508. **Copy seen:** DSG.

29434. GROSSE-BROCKHOFF, FRANZ, and W. SCHOEDEL. Zur Wirkung der Anaesthetica auf unterkühlte Tiere. (Naunyn-Schmiedeberg's Archiv für experimentelle Pathologie und Pharmakologie, June 1943. Bd. 201, no. 5, p. 443-56, 7 fig., table) 6 refs. **Title tr.:** On the effect of stimulating drugs on hypothermic animals.

Contains a study on the effects of cardiazol, coramine, lobeline, and strychnine on dogs made hypothermic under morphium-urethane narcosis. None of these substances had a therapeutic effect during the phases of declining excitability or paralysis. Coramine and lobeline in doses normally well tolerated caused slowing of heartbeat, arrhythmia and drop of arterial pressure in cooled animals; this behavior was traced to an increased vagus action. Abstracted by R. Greene in *Bulletin of war medicine*, May 1944, v. 4, no. 9, p. 508.

29441. GRUENING, ERNEST HENRY, 1887- . Alaska: progress and problems. (Scientific monthly, July 1953. v. 77, no. 1, p. 3-13, illus.)

Population trends between 1880 and 1953, and factors responsible for increase in population after 1930 are discussed. Such factors include programs of private industry and of the Territorial legislature in housing, industry, tourism, revenue, aviation, etc. Reasons for statehood are outlined. Present Territorial needs include revision of land laws, highway development, harbor projects, power development, judiciary reforms and law enforcement, and research in agriculture, fisheries, and public health. Continued need for federal assistance following statehood is stressed. Author was Governor of Alaska 1939-1953. Paper is based on his address to the Third Alaskan Science Conference, 1952.

Copy seen: DLC.

29442. GRUENING, ERNEST HENRY, 1887- . The political ecology of Alaska. (*In: Alaskan Science Conference* . . . 1951. Proceedings, pub. 1953, p. 7-24)

Contains a discussion on the interrelationship of natural, social, and political sciences in Alaska, based on a summary of Alaskan history, government, laws, of land, highway, and tax programs, population trends, influence of World War II on Alaskan development and defense, and the position of Eskimos and Indians in Alaskan government and social structure.

29445. GRUPP, GEORGE W. Navy overland transportation methods in the polar regions. (U. S. Naval Institute. Proceedings, Oct. 1949. v. 75, p. 1123-26, illus.)

"Routes for overland transportation are selected on the basis of aerial photograph and map studies, and aerial and land reconnaissance. Long routes are surveyed daily by aerial reconnaissance to ascertain snow shifting. Insulated, hydraulic-type bulldozers precede the tractor trains to smooth the surface of the proposed trail. The tractor trains consist of trailer units mounted on bobsleds, go-devil sleds or tracked atthey wagons drawn in tandem by tracked-wheel tractors. All batteries and carburators are heavily insulated. Engines are preheated by three types of heaters including a self-powered unit producing 250,000 B. t. u./hr. used for tractors' batteries, crankcases, carburators, intake manifolds and oil pans; a portable unit producing 100,000 B. t. u./hr. and another producing 40,000 B. t. u./hr. for small engine parts at temperatures not lower than -30° F. Idle engines are protected by hoods with solid sidedoors and radiator curtains or shutters. Traction on ice is increased by welding steel pieces cut from the track plates to the existing cleats. Other winterization methods include replacement of the top track carrier rollers with hardwood blocks, placing of steel plates on the side of the roller frames, and installation of track extensions."—SIPRE.

29446. GRYC, GEORGE, and D. J. MILLER. Developments in Alaska in 1952. (American Association of Petroleum Geologists. Bulletin, June 1953. v. 37, no. 6, p. 1477-84, 2 text maps, table) 4 refs.

Contains a survey of explorations for oil and gas in Alaska during 1952. Interest in Alaska possibilities, especially in southern Alaska, increased. The exploration program in the U. S. Naval Petroleum Reserve No. 4 continued and was the only program to use drilling, geological, and geophysical methods. These are described and results sum-

marized. Gas is being produced at South Barrow for use at the Point Barrow base. Work in southern Alaska by major oil companies and the U. S. Geological Survey included exploration in the Gulf of Alaska Tertiary province and the Alaskan Peninsula - Cook Inlet Mesozoic province. The lower Yukon River area is also being investigated as a possible petroliferous region. *Maps* show petroliferous provinces in Alaska, and test wells and areas explored in northern Alaska in 1952.

Copy seen: DGS; DLC.

29447. GRYC, GEORGE. Petroleum possibilities in Alaska. (*In*: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 183-95)

Contains a brief history of oil and gas exploration followed by a discussion of various sections of Alaska. The bedrock geology and structure of the Brooks Range, foothills, and coastal plain of northern Alaska, and the Gulf of Alaska Tertiary province and Alaska Peninsula - Cook Inlet Mesozoic province of southern Alaska are discussed. Interior Alaska and the continental shelf are covered briefly. At present, only one gas well near Pt. Barrow is producing, but favorable structure and oil showings, particularly in parts of northern and southern Alaska, encourage further exploration.

Compte rendu, 1939. p. 326) **Title tr.:** The ethnological connection between the Hungarian pastoral culture and the Asiatic horse and reindeer nomads.

Contains speculation on the unsolved

problem of the relationship between the techniques of horse- and reindeer-breeding. Two possibilities are stressed: either the old Hungarians knew reindeer-breeding, or the Tures had, in very old times, some relations with a reindeer-breeding people, probably Samoyeds.

Copy seen: DLC.

GUNNERUS, JOHAN ERNST, 1718-1773, see Leem, K. Beskrivelse over Finmarkens Lapper. 1767. No. 30372.

29463. GUNTHER, ERNA, 1896- . An analysis of the first salmon ceremony. (American anthropologist, 1926. v. 28, no. 4, p. 605-617, text map) 40 refs.

Four typical ceremonies at the first salmon run of the season, as practiced among North Pacific Coast Indians, are described. The distribution of the ceremony, its relation to the ceremonial complex of the tribe, and attitude toward the salmon shown by the ceremony and by myths and taboos, are discussed. The northernmost people practicing the ceremony are the Tsimshians; the attitude toward the salmon as expressed in mythology and taboos, however, has a much wider distribution, including the Haida and Tlingits. **Copy seen:** DLC.

29464. GUNTHER, ERNA, 1896- . A further analysis of the first salmon ceremony. (Washington. University. Publications in anthropology, June 1928. v. 2, no. 5, p. 129-73, 2 tables, text map) 67 refs. Ph.D. thesis to Columbia Univ.

Contains investigation of ceremonies, practiced by the Pacific Coast Indians (including Tsimshians) on the arrival of the salmon in its first run of the season; they consist in handling the fish ceremonially and eating the first catch in festivity. Salmon myths are known also among Haidas and Tlingits. The area of the salmon ceremonies is entirely within the territory covered by the bear cult which spreads from eastern Siberia through northern North America and is based on the belief in the immortality of the salmon and its conscious will in allowing itself to be caught.

tr.: Results of the archeological investigation on the southern shores of the Kola Peninsula.

Contains report on the work of a party headed by the author which traveled in 1946 from the town of Kandalaksha to the village of Umba (about 300 km.), explored the mouths of the small rivers Luvenga, Kolviša and Umba, and discovered 15 sites of ancient man (settlements, and "labyrinths" or sets of stones). The coastal sites, located on terraces about 10-13 m. above sea level, seldom covered an area of more than 200 sq. m.; the cultural layer usually did not differ in color or elevation from the surrounding ground. The objects found were made of local materials: smaller ones of quartz and quartzite, the larger ones (axes and hammers) of slate and sandstone. Artifacts of flint were very rare. The most common finds were quartzite scrapers of various shapes and sizes, and of high technical quality. Potsherds were not numerous; those found were decorated in the comb pattern and engraved in parallel lines. Site no. 10 near the town of Kandalaksha is described in detail, as are the stone labyrinths near the shores where fish are plentiful. These labyrinths apparently served a magic purpose to assure a good catch, and may be dated for the bronze or early iron age. The exploration of these sites show that the inhabitants of the southern Kola coast were of a culture similar to that in Karelia and Scandinavia, but quite different from that of the population south of the White Sea. Thus the supposed relationship between the ancient inhabitants of Kola Peninsula and those of western Siberia cannot be affirmed.

29473. GURINA, N. N. Rezul'taty rabot arkhologicheskoi ekspeditsii v Karelo-Finskuiu SSR v 1940 g. (Akademiâ nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniâ, 1941. vyp. 9, p. 114-20, illus.) **Title tr.:** Results of the work of the Archeological Expedition to the Karelian-Finnish S.S.R. in 1940.

Contains evaluation of the archeological field work done in 1940 (and earlier). The expedition of 1940 was organized by the Karelian Scientific Institute of Culture, the Karelian State Museum and Institute of the History of Material Culture. Investigations were made or continued in the regions of Medve-

zhagorsk, Kem' and Olonets, and sites were discovered belonging to the "arctic paleolithic" (on the Kem' River), early neolithic and the bronze age. The most interesting sites were discovered at Orov-Navolok, on the shores of Lake Omega, where neolithic hole-comb ceramics, and artifacts of bronze and copper were found which may be dated about 1200-800 B. C. Stone implements were used for a very long time in the northern regions, their use persisting even into the metal age, therefore the Karelian neolithic sites must be considered as belonging to a later date.

29474. GURVICH, G. S. Kolūshka (*Gasterosteus aculeatus* L.) i ee znachenie v rybnom khoz'istve Belogo moria. (Priroda, 1938, no. 7-8, p. 140-41) **Title tr.:** The stickleback (*Gasterosteus aculeatus* L.) and its role in the White Sea fisheries.

Contains results of a study of the life habits of this fish. Very abundant in the White Sea, it serves as food of the cod; it is, however, the herring's strong competitor for food. Author claims it is an injurious fish and should be destroyed during the spawning period.

Copy seen: DLC; MH.

29475. GURVICH, I. S. Sosedskaa territorial'nafā obshchina u Kolymskikh ākutov. (Akademiā nauk SSSR. Institut ētnografii. Kratkie soobshcheniā, 1952. vyp. 17, p. 40-43, 3 text maps) 5 refs. **Title tr.:** The territorial community of propinquity among the Yakuts of Kolyma.

Contains an outline of the tribal and administrative organization of Yakuts before the Revolution of 1917. The Kolyma ulus comprised ten tribes (*nasleg*), each consisting of several clans (*aga-usa*) bearing the name of an ancestral animal or bird. Clan exogamy did not exist. The administrative organization was based not on clans, but on territorial groups (*togoi*). Propinquity, not relationship, was the chief factor in forming a *togoi*, which was the smallest administrative unit and comprised from five to 20 households. After collectivization the *togoi* ceased to exist. The material was collected in 1951 during the author's ethnographical travels to Sredne- and Nizhne-Kolymsk.

vom; Laboratoriā VNIORKHa. (Leningrad. Universitet. Vestnik, Aug. 1950. t. 5, no. 8, p. 216-21) **Title tr.:** Pollution of commercial fish reservoirs by logging; Laboratory of the All-Union Institute of Lake and River Fisheries.

The logging, and lumbering industries develop chiefly along rivers important to the fishing industry. In 1946, in the Barents and White Seas basins, 54 salmon spawning rivers were polluted by bark and wood waste, changing chemistry of their waters. A majority of experts claim that pollution endangers the fisheries, while others, headed by N. A. Ostroumov, claim that large amount of wood in the water increases its biomass (benthos and plankton) and is favorable to fish breeding. In view of this controversy, the Institute of Lake and River Fisheries is carrying out a special investigation, still in progress. The preliminary results show that pollution by wood, especially by tannides and acids of pitch, are harmful to fish and kill the fry. The laboratory results are confirmed by analysis of water of several rivers in Karelia. The paper was delivered to the Conference on reproduction of fish resources, held in Leningrad in March 1950.

29478. GUSSAKOVSKIĬ, V. V. Nasekomye pereponchatokrylye t. 2, vyp. 1. Rogokhvosty i pili'shechiki, chast' 1. Moskva-Leningrad, Izd-vo, Akad. nauk SSSR. 1935. xviii, 453 p. illus. (80 fig.). (In: Fauna SSSR. Insecta Hymenoptera, t. 2, vyp. 1 (Nov. ser. no. 1))

Title tr.: Hymenopterous insects. Chalcidastogastra, pt. 1.

Contains a systematic index to the species of the suborder Chalcidastogastra; followed by an introductory part (p. 1-27) giving a morphological sketch of sawflies, their distribution, life habit, enemies, economic importance (agricultural, horticultural and forest pests), and systematics. In the special part (p. 28-331) are keys to the families, genera and species, an enumeration of about 400 species (some 50 described as new), with synonyms, descriptions, critical notes and data on distribution and ecology. Includes some species native to northern regions of the U.S.S.R. and adjoining countries. Summary in English, p. 333-452. **Copy seen:** DLC; MH-Z.

29479. GUSSAKOVSKIĬ, V. V. Nasekomye pereponchatokrylye t. 2, vyp. 2. Pilil'shehiki, Tenthredinoidea, chast' 2. Moskva-Leningrad, Izd-vo Akad. nauk SSSR, 1947. 235 p. illus. (121 fig.). (*In:* Fauna SSSR. Insecta Hymenoptera, t. 2, vyp. 2. (Nov. ser., no. 32)) **Title ts.:** Hymenopterous insects. Sawflies, Tenthredinoidea, pt. 2.

Contains (p. 7-10) a systematic index to the fam. Tenthredinidae (true sawflies), followed (p. 11-176) by a systematic list of 147 species (including 12 new to science), with keys to the genera and species, synonyms, descriptions, biology, hosts and data on geographic distribution in the U.S.S.R. and in adjoining countries. Includes many species native to northern regions. Index (scientific names) is appended (p. 231-34). Summary in English with Latin descriptions of new species (p. 177-230).

29480. GUSSOW, WILLIAM C. Silurian reefs of James Bay lowland, Ontario. (American Association of Petroleum Geologists. Bulletin, Oct. 1953. v. 37, no. 10, p. 2422-24, illus.) 2 refs.

Contains a reproduction of pen and ink sketches made by Robert Bell in 1885 during exploration of the Attawapiskat River in the James Bay lowland, northern Ontario, for the Geological Survey of Canada. His description of the reefs is quoted. Bell had believed the limestones to be Devonian in age, and had not recognized them as ancient coral reefs. A description is included of the same Attawapiskat reef exposed in the Severn River section, 275 miles northwest of

the type locality described by Bell. The importance of buried reefs in petroleum exploration is noted.

Copy seen: DGS; DLC.

29481. GUSSOW, WILLIAM C. Southern part of James Bay lowland, Ontario, by Ontario Department of Mines. (American Association of Petroleum Geologists. Bulletin, Oct. 1953. v. 37, no. 10, p. 2425-26) 3 refs.

Contains a review of *Geologic map no. 1952-3* pub. by Dept. of Mines, Toronto, 1953, scale 1 in.: 8 mi. or 1:506,880, the first detailed geologic map published on the area. Gussow describes previous geologic work and maps, and summarizes the geology and structure of the area as shown on the present map. The region is underlain by Silurian and Devonian rocks and is important as a possible future petroleum province. "Good structures probably exist and there is much evidence of source and reservoir rocks." As a result of present mapping, correlations have been made between formations of this region and of southwestern Ontario, New York, Michigan, and Manitoba.

29482. GUSTAFSON, JOHN KYLE, 1906-, and **A. E. MOSS.** The role of geologists in the development of the Labrador-Quebec iron ore deposits. (Canadian mining journal, June 1953. v. 74, no. 6, p. 61-68, 3 text maps, graphs, tables) 6 refs.

Contains a discussion of the problems and procedures in developing the iron deposits. The objectives of present geologic work are listed, and a summary is given of the geology and ore deposits of the region, history of geologic exploration, and progress of investigation to 1952. Future work is noted. The staff of the Iron Ore Co. of Canada, organization of geologic work throughout the year, and methods of investigating new territory are discussed. Estimates of iron ore reserves and grades are given.

Copy seen: DGS.

29483. GUTSELL, BARBARA. Dawson city. (Geographical bulletin, 1953. No. 3, p. 23-35, 8 illus. incl. map, plan).

Contains an historical sketch of this settlement at the junction of the Klondike with the Yukon River, initiated in 1896 by Joseph Ladue, and developed in the course of exploitation of the Klondike gold discoveries. The environs, town-

site, and urban pattern are described; the population (9,142 in 1901, 754 in 1951) is traced in relation to gold production of the area and gold prices, also analyzed as to occupation, etc. The services of Dawson as supply, power, transport, and communication center for the Klondike and Sixtymile mining areas are noted, as well as its latter-day function as a tourist center. Author concludes that despite the decline of the boom town, the settlement will not stagnate so long as gold is mined in the area. The illus. include a land-use map and photographs of the settlement and environs.

29484. GVOZDETSKIĬ, N. A. *Pervoe morskoe puteshestvie rossiĭan vokrug sveta; k stoletiiu so dnĭa smerti I. F. Kruzenshterna.* (Priroda, 1947, no. 1, p. 85-89) **Title tr.:** First Russian circumnavigation of the globe; on the occasion of the 100th anniversary of the death of I. F. Kruzenshtern.

Contains a brief summary of the epoch-making voyage of the *Nadezhda* in 1803-1806 under Kruzenshtern, whose narrative was published (*Arctic Bibliography*, No. 9377). **Copy seen:** DLC; MH.

29485. GYELNIK, V. *Nephroma-Studien.* (Hedwigia, 1932. Bd. 72, Heft. 1-2, p. 1-30, illus.) **Title tr.:** *Nephroma* studies.

Contains a critical revision of lichen genus *Nephroma*. Following a key to the species, 18 species (nine described as new), and some forms are listed with Latin diagnoses and descriptions, critical notes, exsiccata, affinities, and reaction to certain chemicals, as well as data on habitat and geographic distribution. *N. arcticum* (Labrador and Greenland, *N. expallidum* (Novaya Zemlya and Swedish Lapland), *N. subpubescens* n. sp. (Swedish Lapland), and *N. submontellum* n. comb. f. *variegatum* n. f. (Tromsø, northern Norway) are included.

Copy seen: MH-BL.

29486. GYELNIK, V. *Peltigera*-Daten. (Hedwigia, 1928. Bd. 68, Heft. 1-2, p. 1-4) **Title tr.:** Data on *Peltigera*.

Contains list of 16 species and forms of the lichen genus *Peltigera* from various regions, deposited in the Botanical Museum at Berlin-Dahlem, and determined by the author. Two species are described as new; *P. canina* native to Chilkoot, in Alaska, is included.

Copy seen: MH-BL.

29487. GYERMEK, LASZLÓ. Die Wirkung des Histamins auf den Gasstoffwechsel und die Körpertemperatur. (Naunyn-Schmiedeberg's Archiv für experimentelle Pathologie und Pharmakologie, 1950. v. 209, no. 4-5, p. 456-64, illus., table) 16 refs. **Title tr.:** The action of histamine on the gaseous metabolism and on temperature.

Histamine given subcutaneously (8 mg/100 g) to rats in luminal, urethan or morphine-scopolamine narcosis, raised their body temperature and oxygen consumption when the ambient temperature was 30° C. At 20° C. it lowered the body temperature, without changing oxygen metabolism; at 24° C. it did not affect body temperature but increased somewhat the oxygen consumption. In the summer, oxygen consumption was not increased at 30° C. environmental temperature. Adrenalin was found to have similar effects, including seasonal fluctuations.

29489. HAARTMAN, CARL von. Försök att bestämma den genuina racen af de i Finland boende folk som tala Finska. (Finska vetenskaps-societeten, Helsingfors. Acta Societatis scientiarum fennicae, 1847. v. 2, p. 845-60) **Title tr.:** An attempt to determine the real race of the Finnish speaking inhabitants of Finland.

The author seeks to determine by means of cranioscopy which part of the Finnish population represents the original type of the Finnish race. The three tribal units which have been regarded as undeniably Finnish are the inhabitants of Karelia, Savolax and Tavastland. On the basis of cranial measurements, the

Karelians are claimed to be not Finns, but of Arabian (Bedouin) origin; and the inhabitants of Tavastland or Häme (north and south of 62° N.) to "represent a pure type, the only pure one of the people speaking Finnish."

Copy seen: DLC.

29490. HAAVIO, MARTTI HENRIKKI, 1899-. Über Sagen und Legenden aus Russisch Grenz-Karelien und Aunus. (Suomalainen tiedeakatemia, 1935, pub. 1937. p. 106-111) **Title tr.:** On stories and legends from Karelia on the Russian border and from Aunus.

Contains condensed report concerning author's investigation on legends of this region. About 73 types of them were found, mostly narratives on creation of the world and man, stories from the life of Jesus and the saints, the life after death, and the end of the world, etc. The great influence of Byzantine culture (through the medium of the Russian Orthodox Church) is apparent. This influence emanated from monasteries and places of pilgrimage, primarily from Velamo and Solovefsk. The author deals more extensively with the same subject in his paper, *Über orientalische Legenden und Mythen in Grenz-Karelien und Aunus*, *Studia Fennica*, 1936, v. 2, pt. 1.

Copy seen: DLC.

29491. HABERBOSCH, PAUL. Über arktische Süßwassererustaceen. (Zoologischer Anzeiger, 1916. Bd. 47, no. 5, p. 134-44) **Title tr.:** On arctic freshwater crustaceans.

Contains a simple list of 43 fresh-water crustaceans (Phyllopoda: 2, Cladocera: 21, Copepoda: 11, Ostracoda: 9) from various localities in West Greenland (66°56' N.-70°35' N.). Eleven are new to the fauna of Greenland and five new to that of the western coast. A discussion of systematics and geographic distribution of these crustaceans follows.

Copy seen: MH-Z.

29492. HACKETT, WILLIAM D. Mt. McKinley from the west. (Mazama, Dec. 1951. v. 33, no. 13, p. 5-15, illus.)

Contains excerpts from a report on the eight-man Mt. McKinley expedition, July 18-Aug. 2, 1951, sponsored by the Boston Museum of Science, University of Denver, and University of Alaska. The objectives were to complete a survey and mapping program, to explore the geological structure and secure a photographic record of the west side, and to

discover an easier approach than that formerly used (in view of establishing a permanent cosmic ray station on the summit). A day-by-day narrative of events is given, including weather observations and final data.

Copy seen: DGS.

29493. HACKMAN, WALTER. On the *Choreuthis-myllerana*-group. Lepid., Choreuthidae. (Notulae entomologicae, 1946, pub. 1947. v. 26, no. 3-4, p. 71-75, illus.)

Contains a critical revision of butterflies of *Choreuthis myllerana* group with descriptions of five species of that group, one new. Includes *C. punctosa*, native to the Kuusamo region of northern Finland.

Copy seen: CU.

29494. HAEKEL, JOSEF. Idolkult und Dualsystem bei den Ugriern; zum Problem des eurasischen Totemismus. (Archiv für Völkerkunde, 1946. Bd. 1, p. 95-163, illus., sketch map) **Title tr.:** Cult of idols and the dual system among the Ugrians; contribution to the problem of Eurasian totemism.

Contains comparative study based on literature, of idols and social organization among the Eurasian peoples, especially Ostyaks and Voguls. Author concludes that though totemism of clans does not exist in northern Asia, a certain kind of individual totemism is common which fits well into the shamanistic ideology. The worship of idols among the Finno-Ugrians, Samoyeds and Tungus is based on respect rendered to the ancestral spirits of a large family or settlement. The exogamic dual class system among the Ugrians and Ostyak Samoyeds obviously was transplanted from south-eastern Asia to the North by Yenisiens. *Illus.* show 14 figurines, mostly of bronze, found in northern Asia. *Map* indicates the settlements of Ugrians before the 13th century.

Copy seen: DSI-M.

29495. HÄLLSTÉN, K. Crânes lapons de la paroisse d'Utsjoki, gouvernement d'Uleåborg. (Bidrag till kännedom af Finlands natur och folk. (Finska vetenskaps-societeten) Helsingfors, 1885. Häfte 40, no. 2, p. 3-14, 2 tables) **Title tr.:** Lapp skulls from Utsjoki parish in Uleåborg county.

Brief descriptions of 94 skulls of Laplanders from an abandoned cemetery on the banks of the Utsjoki River, a tributary of the Tana (about 68°50' N.).

Their measurements are given on separate tables. **Copy seen:** DLC.

29496. HÄLLSTÉN, K. Crânes rassemblés dans la paroisse de Paldamo, gouvernement d'Uleåborg. (Bidrag till kännedom af Finlands natur och folk. (Finska vetenskaps-societeten) Helsingfors, 1885. Häfte 40, p. 69-74, 2 fold. tables) **Title tr.:** A collection of skulls from Paldamo parish in Uleåborg county.

Brief descriptions of 37 skulls from an abandoned cemetery at Kirkkonniemi on Lake Oulu (about 65° N.). Most of the skulls date from the 17th century. The population of the district according to Oscar Lännebohm, the collector of the skulls, is of pure Finnish stock, but Lapplanders are known to have dwelt in the parish at one time. Tables give craniological measurements.

Copy seen: DLC.

29497. HÄLLSTRÖM, G. G. Undersökning om ett i Finska Lappmarken gjort fynd af gamla vigter och mynt, m. m. (Finska vetenskaps-societeten, Helsingfors. Acta Societatis scientiarum fennicae, 1842. v. 1, p. 731-40) **Title tr.:** Investigation of a find of old weights, coins, etc., in Finnish Lappmark.

In 1841 a bundle containing 174 small silver coins, a small balance with two scales, 12 weights, and some jewelry was found under a rock on the boundary (about 67° N.) between the Kuolajärvi and Sodankylä parishes. The coins were from various reigns between 800 and 1300; 75 were of Anglo-Saxon, the rest of German origin. The weights were weighed and compared, and the basic weight unit was found to be 4.22 grams. The smallest weight weighed 8.016 g., corresponding roughly to two units, and the largest 100.315 g., corresponding roughly to 24 units. It is highly probable that these twelve weights originally came from Russia, as the Byzantine weight unit, the *solidus aureus*, which became the Russian *zlotnik*, equalled 4.266 grams.

29498. HÄLLSTRÖM, G. G. Ytterligare bidrag till kännedomen af de i Lappland funna gamla vigterne. (Finska vetenskaps-societeten, Helsingfors. Acta Societatis scientiarum fennicae, 1847. v. 2, p. 107-118, tables) **Title tr.:** Further contribution to the interpretation of the old weights found in Finnish Lapland.

The construction of the balance found near the boundary between the Ku-

olajärvi and Sodankylä parishes in 1841 is described in detail. The balance is shown to be very similar to the so-called Palfer balance, described by Friedr. Kruse in his *Necrolionica* (1842), examples of which had been encountered in various parts of the Baltic region. The same similarity exists between the weights found in Finnish Lappmark and those described by Kruse. There can be no doubt, according to the author, that the Byzantine *solidus aureus* (later the Russian *zlotnik*) was the prevailing unit of weight in the northernmost parts of Europe around 1000 A. D.

29501. HÄYRÉN, ERNST FREDRIK, 1878- . Från en havsbiologisk exkursion till Petsamo sommaren 1925. (Terra, 1926. v. 38, no. 1, p. 28-48, 7 illus.) **Title tr.:** A marine-biological excursion to Petsamo in the summer of 1925.

The chief aims of the expedition were to study the animal and plant species along the Petsamo coast, to measure the temperature and determine the salt content of the coastal waters, to photograph the shores and their plant and animal communities, and to select a suitable site for a permanent biological marine station. The expedition set up headquarters first

at Trifona on Petsamo Fjord and then at Punimanki on Rybachiy Peninsula. The birch forests of the area are little more than brushwood vegetation, and the ground is covered with lichen, mosses, scrub, and the like. The algal vegetation in the sea, on the other hand, is luxuriant, but it does not differ to any extent from that of Scandinavia's Atlantic coast farther to the south. The species of marine life mentioned belong to three regions: the supralittoral, the littoral, and the sublittoral, each of which is subdivided into a number of belts.

29502. HÄYRÉN, ERNST FREDRIK, 1878- . Från en resa till Torne Lappmark och Nordlands amt. (Terra, 1916. v. 28, p. 57-99, 8 illus., 4 plates) *Title tr.:* A trip to the Torne district in Swedish Lapland and to Nordland county.

The author conducted phenological investigations in northern Sweden and Norway during the summer of 1915, visiting, among other places, Kiruna (67°52' N. 20°15' E.) and nearby Luosavaara, Lake Torne, Ofoten Fjord and its eastern arm, Rombakken Fjord, nearby Narvik (68°26' N. 17°24' E.), and Hinnøy, largest of the Vesterålen island group. Descriptions and lists of the alpine and subalpine plants found are given, and the influence of such factors as wind and snow cover on the vegetation is discussed.

Copy seen: DLC.

29503. HÄYRÉN, ERNST FREDRIK, 1878- . Norra Finlands första natur-skyddsområde, Malla fjäll vid Kilpisjärvi. (Terra, 1917. v. 29, p. 195-219) *Title tr.:* Northern Finland's first nature sanctuary, the Malla Mts. on Kilpisjärvi.

The Malla region along Kilpisjärvi (Lake Kilpis) (69°10' N. 20°45' E.) in the extreme northwestern part of Enontekis is especially rich in rare plants. The resolution declaring it a nature sanctuary was signed on Nov. 13, 1916. The highest peak of the Malla massif, which extends along the northern shore of the lake, rises 745 m. above sea level. Within this region 21 vascular cryptogams and 217 phanerogams have been found.

Copy seen: DLC.

29504. HÄYRÉN, ERNST FREDRIK, 1878- . Om växtgeografiska gränslinger i Finland. (Terra, 1913. v. 25,

p. 53-75, illus.) *Title tr.:* The phytogeographical boundary lines in Finland.

The phytogeographical boundary lines are drawn in four different ways, according to floristic, phytophysiological, phytotopographic, and cultural aspects. Each of these four divisions is treated separately. The phytophysiological boundaries are based not on the flora of any one region, but on the vegetation taken as a whole. They separate Finland into five regions: (1) the oak region; (2) the maple and elm region to about 62° N.; (3) the linden region to about 63°30' N.; (4) the region south and north of the Arctic Circle; and (5) the Lapland region. The latter is divided into the spruce, pine, birch, and mountain zones. The bulk of the study is devoted to the phytotopography of Finland.

29506. HÄYRÉN, ERNST FREDRIK, 1878- . Växtgeografiska anteckningar nedanför Jebrenjokk vid Torneträsk. (Terra, 1924. v. 36, no. 2-3, p. 196-207, 5 illus.) *Title tr.:* Phytogeographical observations below Jebrenjokk at Lake Torne.

Banks of gravel and sand are formed by the deposits of mountain streams flowing into Lake Torne (in the northwest corner of Swedish Lapland). The gravel stones have a diameter of 1-7 cm. and a thickness of .5-1 cm. Five such banks on the north side of Lake Torne below the Jebrenjokk tourist hut were visited by the author in the summer of 1916. They rise about 1 to 1.5 m. above the lake surface and are from 14 to 200 m. long. The vegetation of each bank and the lagoon it forms is described separately. The development of the

vegetation on the banks and in the lagoons is traced, and mention is made of the alpine plants that grow on the inside slope of some of the banks.

Contains short account on author's trip to Lapland in summer 1886, studying the Lapp language in various localities in Troms, Hatfelddäl, and Jemtland. Two new Lapp dialects were discovered: the Karesuando and the Hatfelddäl. Sixty-two folk tales and other narratives were noted down. Both trips were sponsored by the Hungarian Academy of Sciences. *Copy seen:* DLC.

29515. HALÁSZ, IGNAZ. Bericht über seine dritte Lappland-Reise. (Ungarische Revue, 1892. Jahrg. 12, p. 57) *Title tr.:* Report on his third Lapland journey.

Contains account on author's sojourn in Lapland in 1892 for linguistic investigations. He stayed at Tromsø, Bodø, and (for four weeks) at Rognan in Saltdalen. More than 100 texts of folklore were noted down, of which most important were the mythological legends.

Copy seen: DLC.

29516. HALÁSZ, IGNAZ. Die Frage der ugrisch-samoyedischen Sprachverwandschaft. (Ungarische Revue, 1893. Jahrg. 13, p. 215-16) *Title tr.:* The question of relationship between Ugrian and Samoyedic languages.

Contains summary of a lecture in which the similarities between the two linguistic groups are stressed: more than 200 words are of common origin, and deal with hunting and fishing, spinning and weaving, the use of iron, etc., indicating the same cultural level; common features in grammatical forms are named. The Samoyedic may be considered sister to the Ugrian languages. The two linguistic groups together are called *Uralic*.

Copy seen: DLC.

29517. HALÁSZ, IGNAZ. Die lapplischen Dialekte Schwedens. (Ungarische Revue, 1889. Jahrg. 9, p. 291-92) *Title tr.:* The Lappish dialects in Sweden.

Contains summary of a lecture: the Lappish has at least eight principal dialects which may be considered as separate languages in that the speakers of them cannot understand each other; and there are no less than thirty minor dialects. In Sweden three chief dialects exist, which include numerous subdialects.

The large and sparsely populated territory, and the isolation of people are held to be responsible for the numerous dialects and their considerable differentiation. *Copy seen:* DLC.

29518. HALBERG, FRANZ, and others. Eosinophil rhythm in mice; range of occurrence; effects of illumination, feeding and adrenalectomy. (American journal of physiology, July 1953. v. 174, no. 2, p. 109-22, illus., tables) 38 refs. *Other authors:* Maurice B. Visscher and John J. Bittner.

Mice kept under normal conditions show a morning 'high' and an early night 'low' in the number of tail-blood eosinophils. Reversal of lighting regimen reverses the eosinophil rhythm within four-nine days. The effects of continuous, or alternating exposure to light and darkness, and the role of diet in the illumination experiments were also studied. Extirpation experiments suggest the adrenal as a part of this complicated rhythm. *Copy seen:* DSG.

HALDEMAN, JACK CARROLL, 1912- . Facilities and opportunities for research at the Arctic Health Research Center. See Alaskan Science Conference, Nov. 1950. Proceedings, 1951. No. 20117.

Contains an abstract of a lecture given at the First Alaskan Science Conference at Washington, D. C., Nov. 1950. Data are presented on mortality: among whites, accidents, alcoholism, suicide and homicide cause 32 percent of all deaths in Alaska against nine percent in continental U. S. A.; tuberculosis, 48 percent of all deaths among natives, ten times as much as in continental U. S. A.; whooping cough, syphilis, trichinosis, tularemia and other diseases are also included and the causes of severity of some of them in this area, discussed. *Copy seen:* DLC.

HALDEMAN, JACK CARROLL, 1912- . Problems of Alaskan Indian, Eskimo, and Aleut from the point of view of public health. See Alaskan Science Conference, Nov. 1950. Proceedings, 1951. No. 20117.

29520. HALDEMAN, JACK CARROLL, 1912- . Violent and accidental deaths as a health problem in Alaska. (*In:*

Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 103-107)

Contains an account of death from "external causes" (accidents, alcoholism, suicide and homicide) which, as a group, exceeds even deaths from tuberculosis and is two-and-a-half times higher than in the continental United States. Incidence, among natives and whites, causes or circumstances, particular nature of factors, comparisons with the continental U. S., possibilities of control, etc., are discussed. **Copy seen:** CaMAI; DLC.

29521. HALE, CHARLES REUBEN, 1837-1900. Innocent of Moscow, the apostle of Kamchatka and Alaska. 1877. 20 p. (6 refs.) "Reprinted from the July number of the *American Church review*."

Contains brief sketch of the life of this outstanding dignitary of the Orthodox Church, better known by his family name Veniaminov, 1797-1879. His activities as a missionary among the Aleuts, is described chiefly on the basis of his letters: the great resistance of the Koloshis of Sitka to the Russians and their religion; Veniaminov's use of inoculation against small-pox in 1834, thus gaining confidence of the Koloshis (Tlingit Indians) and making numerous converts, etc.

29522. HALEY, JAMES F. Cold-room studies of frost action in soils; a progress report. (National Research Council. Highway Research Board. Bulletin, 1953. no. 71, p. 1-18, tables, graphs, diagrs.) 8 refs.

"Results of studies by the Frost Effects Lab. from Feb. 1950-Oct. 1952 are given. Frost-action effects in soils were studied as related to grain-size distribution, initial density, overburden pressure, initial degree of saturation, rate of freezing, solidification temperature, clay mineral compaction, and admixtures. The intensity of ice segregation in soils is dependent on the percentage of grains finer than 0.02 mm. and on the grain-size distribution. The intensity of ice segregation is decreased appreciably in an increase in overburden pressure, all other factors being equal. Soils may be made less susceptible to frost action by adding trace chemicals which disperse, aggregate, or waterproof the soil grains."—SIPRE.

29527. HALLDAL, PER. Phytoplankton investigations from weather ship M in the Norwegian Sea, 1948-49; including observations during the "Armauer Hansen" cruise, July 1949. Oslo, Jacob Dybwad, 1953. 91 p. 21 illus. (Hvalrædets skrifter, no. 38) 61 refs.

Contains the results of a quantitative phytoplankton survey at weather ship M (66° N. 2° E.) with weekly observations from Oct. 1948 to Nov. 1949. Materials and methods are noted. Data are given on the phytoplankton population and the causes of its seasonal changes at the station, and on phytoplankton from the *Armauer Hansen* cruise (66°23' N.). A systematic list of about 150 species of diatoms, coccolithophorids, flagellates and ciliates is presented (p. 40-64), with descriptions of three new species and notes on seasonal distribution of plankton. The poverty of phytoplankton in the winter period is concluded to be due mainly to lack of light; the rapid spring and summer increase in this population (especially in *Fragilaria nana*, Aug.-Sept.) coinciding with increase in light, and its decrease in the autumn period caused by turbulencia. Appended are materials collected weekly on station M, Oct. 1948 through Oct. 1949, at the following levels: 0, 10, 25, 50 and 75 m., with added observations on temperature and salinity; also tables (13-15, 20) dealing with plankton from the *Armauer Hansen* cruise July 1949; and (17-19) some diatom measurements.

29528. HALLER, GILMER, B. von. The relation of cold sensitivity to sweat duct distribution and the neurovascular mechanisms of the skin. (*Journal of psychology*, Apr. 1942. v. 13, p. 307-325, table)

Contains a study showing two patterns of distribution of cutaneous cold-spots: (1) on sweat gland openings, and (2) on ductless skin surfaces; 19.1 percent of the sweat gland openings were found to be highly sensitive to cold stimulation, whilst only 10.7 percent of the ductless spots behaved similarly. Explanations of the results are presented in terms of temperature conduction of the skin and

of neurovascular activity, and relations of the latter to cold sensitivity and to other cutaneous experiences, are discussed. Bibliography (16 items).

29530. HALLOWELL, ALFRED IRVING, 1892- . The physical characteristics of the Indians of Labrador. (*Société des Américanistes de Paris. Journal*, 1929. nouv. ser., t. 21, p. 337-71, tables) 13 refs.

Contains anthropometric data on about 41 male and 29 female Montagnais-Naskapi Indians, made in the summers of 1923 and 1924 by the author and F. G. Speck on the southern coast of the Labrador Peninsula, under auspices of the Museum of the American Indian (Heye Foundation), New York. These Indians live in the interior of the peninsula, and in June-July travel by canoe to the trading posts along the coast, to dispose of their winter's catch of furs, some traveling a distance of 600 to 800 miles. Some of the individuals measured were from Ungava and Northwest River bands. The Indians of Labrador show in their ethnology a series of parallelisms with Eskimo culture, therefore, the author wanted to clarify also the anthropological relations. From each person, 13 measurements were taken, ten indices calculated and six observational characters noted. The figures were compared with anthropological statements on Eskimo and other Indian tribes. The analysis of the available data, however, does not indicate that the Montagnais-Naskapi exhibit any features which can be unequivocally traced to Eskimo admixture. The Indians represent a

relatively homogenous physical type, clearly distinguishable from the Eskimo, markedly different from Indians south of the St. Lawrence, and though not purely aboriginal, yet showing limited admixture with Whites, and conserving in a large percentage of individuals, what are essentially Indian characteristics.

29531. HALLSTRÖM, GUSTAF, 1880- . Monumental art of northern Europe from the stone age, I. The Norwegian localities. Stockholm, Thule, 1938. 544 p. text illus. (incl. map), 139 phototype figures on 32 plates, 48 collotype plates in a special folder. Translated by Bernard Norbelle.

Contains a study of prehistoric rock-carving and paintings found in Norway, based on author's field work between 1907 and 1917, and other authors' work. Each of the book's 37 chapters deals with a locality where the petroglyphs were found; the first nine concern arctic localities in a region between 69°19' N. and 65°43'30" N. The pictures are described, a "reading" or attempt at explanation of what they may represent is given; comparative notes are included, and explanations previously suggested by other investigators are frequently discussed.

29535. HAMBERG, AXEL, 1863-1933. Översikt af Lule älfs geologi. Stockholm, 1906. 74 p. illus., fold map. (Sweden. Geologiska Undersökning. Afhandlingar och uppsatser. Ser. C, no. 202) *Title tr.:* Survey of the geology of the Lule River.

The geological formations of the Stora Lule River and the Lilla Lule River in Swedish Lapland are treated separately until Avaudden (66°50' N. 20°40' E.), where they meet to flow southward to Luleå (65°35' N. 22°10' E.) and the Gulf of Bothnia as the Lule River (Luleälv). The species of the microscopic plant and animal fossils studied are listed. These date mostly from late Pleistocene time when a part of the region was a fiord of Ancyus Lake. A separate chapter deals with the geology of the Lule's tributaries, especially the Görje River, which flows into the Lule about twenty kilometers south of Avaudden.

29538. HAMMER, MARIE SIGNE (JØRGENSEN), 1907-. Investigations on the microfauna of northern Canada. Part I, Oribatidae. København, E. Munksgaard, 1952. 108 p. incl. illus., maps, figs., tables. Acta arctica, fasc. 4)

Contains a study of the oribatids (wood-mites) of Canada, particularly those of its arctic regions (collecting areas in Mackenzie District, Hudson Bay, Rocky Mts., Baffin Island and Labrador). 106 forms are described, of which one variation, 40 species and one genus are new; only three species have been described previously from this area. Measurements have shown that the arctic forms are larger than the corresponding southern species, and that about half of the oribatids of northern Canada are larger than their palaearctic counterparts. A great similarity with the oribatid fauna of Greenland and Europe was also established. The study is based on field work carried out in Canada in 1948, supported by the Arctic Institute of North America with funds of the U. S. Office of Naval Research.

tions on the microfauna of northern Canada. Part II, Collembola. København, E. Munksgaard, 1953. 108 p. 3 illus., tables, 4 text maps, 13 plates. (Acta arctica, fasc. 6) 100 refs.

Contains a study of Collembola (a group of primitive wingless insects) collected largely in the arctic areas in 1948: the Mackenzie delta, Yellowknife, and Coppermine in Mackenzie District, Churchill on Hudson Bay, Frobisher Bay on Baffin Island, and the Ungava Bay region of northern Quebec. Altogether 630 samples were examined, 97 species found, 18 of them new. The morphology of the new forms is treated in detail and supplemented with notes on habitat, occurrence, etc. Special sections deal with the ecology and distribution in Canada (p. 65-77) and geographical distribution in general (p. 77-85).

Includes (p. 106-124) description of objects found at the paleolithic site

Mal'ta (85 km. northwest of Irkutsk on the Belaya River), explored by M. M. Gerasimov in 1928-34. Among other things, 20 female figurines carved mostly from mammoth ivory (a few from reindeer horn) were found at Mal'ta (p. 106-124). One such ivory statuette was also found at Bureti (Angara valley) in 1936. The figurines were evidently objects of cult among the mammoth hunters, who probably belonged to the Cro-Magnon race. A parallel is indicated among recent Siberian reindeer hunters (Ostyaks, Yakuts, Golds, Chuvash, Negidals and others), who carve female statuettes of wood, call them *dzhuli*, and consider them as protectors of the family and clan (p. 150-151). **Copy seen:** DLC.

29544. HANSEN, HENRY PAUL, 1907-. Postglacial forests in the Yukon Territory and Alaska. (American jour-

nal of science, July 1953. v. 251, no. 7, p. 505-542, text map, 6 tables, 8 diagrs.) 37 refs.

Contains description of the composition of present forests along the Alaska, Glenn, Richardson, and Slatonok Highways, and presents a reconstruction of postglacial forests from pollen analyses of 75 peat sections collected from muskegs, bogs, and swamps. Three main types of collection sites and their plant communities are described in some detail. Forests in Yukon Territory and coastal and interior Alaskan forests are described, and factors such as slope, exposure, drainage, depth and structure of soil, and fire, which influence present composition are discussed. Climatic trends and chronology cannot be definitely determined by these methods, but author suggests "that on the average the [peat] sections from interior Alaska and in the Yukon Territory represent an age up to 5000 years, while deeper sections near the coast are somewhat older."

29545. HANSEN, POUL. Svingningerne i det Grønlandske torskefiskeri. (Grønland, 1952? hefte 1, p. 32-42, illus.) **Title tr.:** Variations of the cod-fishery of Greenland.

Fluctuation in yield is discussed as a result of over-fishing and of natural conditions. Scientific investigation of such factors as temperature, salinity, and marine biology, especially the natural enemies of the cod fry, is reviewed. Failure of the Icelandic herring fishery is attributed to a cold under-current which the herring would not traverse. Johan Hjort's theory that adequate food for the cod fry is the most important factor, is discussed. Maturation of but two eggs of four million laid by the cod, is sufficient to maintain the stock. The fishery in Greenland waters is summarized, its standards reported as excellent, and its outlook considered favorable.

29546. HANSON, HERBERT CHRISTIAN, 1891-. Vegetation types in

northwestern Alaska and comparisons with communities in other Arctic regions. (Ecology, Jan. 1953. v. 34, p. 111-40, incl. illus., tables, map) 31 refs.

"The preliminary classification of the vegetation of northwest Alaska contains six major physiognomic classes and 22 types. Environmental and aerial recognition of each type is given. Factors influencing the development, maintenance, or change in species within type are soil qualities, depth of summer thaws, congeliturbation, drainage, depth and duration of snow cover, wind exposure, animal activities, and man-caused disturbances. Similarities of the Alaskan and Scandinavian plant communities are pointed out. The presence of certain types of plant colonies indicate soil conditions, depth to perennial frost, surface and subsurface materials, moisture and drainage conditions, and offers useful information for the location of engineering projects."—SIPRE. The study is mainly based on the author's field work during the summers of 1949-51 from the lower Noatak and Kobuk Rivers to the region southeast of Norton Sound. (67°-63° N. lat.). **Copy seen:** DLC.

29547. HANSSEN, ODD E., and L. KREYBERG. The effect of ice water upon the development of skin lesions due to mustard gas in rabbits. (Acta pathologica et microbiologica scandinavica, 1951. v. 29, no. 4, p. 468-72, illus., table) 2 refs.

Contains a report on experiments which demonstrated that injuries caused by contact with a two percent solution of mustard gas are reduced by application of cold; this is especially the case when the injured skin is brought in direct contact with ice-cold water.

HARDY, JAMES DANIEL, 1904-, see Wolf, S. G., and J. D. Hardy. Studies on pain due cooling. 1942. No. 32957.

29551. HARE, FREDERICK KENNETH, 1919-. The climate of the eastern Canadian Arctic and sub-Arctic and its influence on accessibility. Montreal, 1950. 440 p. illus. maps (1 fold.). (Thèse présentée à la Faculté des Lettres, L'Université de Montréal pour l'obtention du grade de Docteur es Arts) 160 refs.

The western boundary of the region discussed runs from Lancaster Sound to just west of Churchill, then south and southwest (excluding the northern and western Canadian Arctic Islands); it is the line east of which "cyclonic influences outweigh the quieter influence of the high pressure typical of western districts." The southern boundary of the sub-Arctic is the line along which only 120 consecutive days have a mean temperature above 50° F. The Arctic - sub-Arctic boundary is the isotherm of 50° for the warmest month.

The three sections of the report include:

(1) the dynamic climatology of the region and influence of physiography on climate; (2) a discussion of the main branches of physical and ecological climatology, a brief review of physiological climatology, classification of climatic regions, discussion of natural vegetation and its climatic correlations, and climatic change in post-glacial times; (3) the effect of climate on transportation overland, by sea, and by air, throughout the year. Statistical data were based upon station records of the Canadian Meteorological Service, Deutsche Seewarte (Hamburg), U. S. Air Weather Service, and Province of Quebec weather stations. Field work was done in the Goose Bay, Labrador, area, aerial traverses were made over interior Labrador-Ungava, and air reconnaissance flights over Hudson Bay.

29552. HARE, FREDERICK KENNETH, 1919-. Recent investigations into the distribution of snow and ice in eastern Canada. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. General Assembly, Brussels, 1951, pub. 1952? t. 1, p. 167-71, graphs) 12 refs.

"Hudson Bay pack ice and the snowfall

in Labrador-Ungava are discussed. Upper-air stations distributed around the shores of Hudson Bay permitted the study of the modifications of continental polar air masses over the Bay. The predominant air flow is across the Bay from northwest to southeast. Cold air crossing the Bay reaches Quebec with an unstable layer in the lower troposphere extending from sea level to 7,000-10,000 ft. in the autumn, its depth and degree of instability diminish in Dec. and no essential change in structure while crossing the Bay occurs from mid-Jan. to June. The unstable layer in autumn is produced by heating from below over the unfrozen waters of the Bay and the stability during winter and spring is attributed to the formation of ice over Hudson Bay. Four winters of photographic aerial reconnaissance have confirmed the existence of Hudson Bay pack-ice sheet, with the area south and west of the Belcher Islands being the last to freeze. Heavy snow along the east coast of Hudson Bay in Nov. and its disappearance in Jan. substantiate the theory of a frozen bay after Jan."—SIPRE.

29556. HARKINS, HENRY NELSON, 1905- , and **J. E. HUDSON.** Shock due to freezing, 2. Composition of edema fluid. (Society for Experimental Biology and Medicine. Proceedings, 1934. v. 32, p. 434-35, table) 2 refs.

Contains an analysis of edema fluid from experimentally frozen areas of dogs. The composition of the fluid was found to be quite similar to blood plasma. This suggests that the loss of this fluid from the blood stream may in part account for the shock resultant to freezing.

Copy seen: DLC.

29557. HARKINS, HENRY NELSON, 1905- , and **P. H. HARMON.** Thermal injuries: the effects of freezing. (Journal of clinical investigation, 1937. v. 16, p. 213-21, 2 fig., 4 tables) 22 refs.

Contains an account of experiments with laboratory animals (dogs, rabbits) on the effectiveness of quick rewarming in treating local frostbite, and on the general effects of the latter. No evidence was found in favor of the old practice of slow thawing of a frozen area. Under certain conditions, local freezing caused a marked lowering of body temperature; thawing was accompanied by an exudation of plasma-like fluid into the local tissue, with resulting blood concentration, lowered bleeding volume and decrease in arterial blood pressure, resembling secondary shock following burns.

Contains a study made during May-Dec. 1947 aided by the Arctic Institute of North America with funds of the U. S. Office of Naval Research and some auxiliary funds. The investigation centered around the northwestern corner of this lake on the Manitoba-Keewatin boundary (60°-61° N., 98°-100° W.), and stressed the habitat, condition of gonads, color of bare parts, weight and ectoparasites. About 130 specimens representing 35 species were collected. The report consists of a general part (p. 1-13) dealing with earlier investigations, physiography and vegetation of the region; general ecological and biological notes on the area; relative abundance of species; plumage, etc.; this is followed by accounts of species; (p. 13-110) with data on earlier studies, present observations, occurrence, movements, habits, color, weight, etc. An alphabetic index of the species studied is attached.

Copy seen: CaMAI.

29560. HARRINGTON, LYN. Jewels from mastodon tusks. (Popular mechanics, Mar. 1950. v. 93, p. 162-63, illus.)

Describes the carving of fossilized mastodon-ivory tusks, about 20,000 years old, uncovered in placer gold mining operations in the Yukon. The work now done by Jack Elliot, of Whitehorse, Yukon Territory, with a power-drill produces costume jewelry souvenirs for the tourist trade. **Copy seen:** DLC.

29561. HARRINGTON, LYN, and R. HARRINGTON. They put the home town on skids. (Popular mechanics, July 1952. v. 97, p. 106-107, illus.)

Describes the wholesale midwinter movement of about 250 buildings and 1,200 people from the abandoned settlement of Sherridon, Manitoba, Canada, in that worked-out copper-nickel area, to Lynn Lake, 165 miles to the north, where new deposits have been discovered. The transportation by tractor and sleigh, mostly over a chain of frozen lakes, required 50 hours each trip, and cost \$40 a ton; but it was cheaper to move than to rebuild.

29576. HASS, GEORGE MARTIN, 1907-, and C. B. TAYLOR. A quantitative hypothermal method for the production of local injury of tissue. (Archives of pathology, May 1948. v. 45, no. 5, p. 563-80)

Contains a description of two sets of instruments, cooled to a low temperature by expanding carbon dioxide, which permit local, quantitative tissue injury to be made for experimental purposes: one

set consists of a circular disc, 2 to 25 mm. in diameter causing, when applied to surfaces, lesions 1 to 13 mm. deep; the other consists of a needle which when inserted into tissues produces cylindrical lesions of a determinable diameter and depth; results of operations with the instruments, on various organs, are presented.

29577. HASSAN, M. YOUSSEF. Tertiary faunas from Kap Brewster, East Greenland. København, C. A. Reitzel, 1953. 42 p. 5 plates, sketch map (Meddelelser om Grønland. Bd. 111, nr. 5) 46 refs.

Contains results of a study of material collected from Kap Brewster, south of Scoresby Sund, during the Danish East Greenland Expedition in 1951. On the basis of faunal assemblages, the sediments overlying basalts at Kap Brewster have been divided into two series, the older probably late Eocene, the younger Miocene. Stratigraphy is described in some detail, and a list given of 45 species of fossil molluscs, crustaceans, and a few corals and foraminifera, with descriptions and locations.

29579. HASSERT, KURT, 1868- . Die Nordpolargrenze der bewohnten und bewohnbaren Erde. Naumburg a.S., 1891. 103 p. fold. map. **Title tr.:** The North polar limit of inhabited and habitable territory. Dissertation, University of Leipzig.

Anthropogeographical study on natural conditions in the Arctic with regard to their habitability by man and possibilities of his survival. Formerly inhabited zones in the far North and those of recent times are reviewed, and the cultural status of the inhabitants outlined. The diminishing number of arctic peoples and its causes are discussed. The Polar Eskimos reach to the 76°-79° N. lat., and remains of former settlements have been found as far as 82° N., the northernmost spot inhabited by man. Many references are made to the conditions of life in Greenland, Canadian Arctic Islands, and in Siberia. The map shows the former and recent limits of the inhabited Arctic, and territories inhabited by Eskimos. An extensive abstract is given in *Petermanns geographische Mitteilungen*, 1891, Bd. 37, p. 141-52; and a brief one in *Globus*, 1891, Bd. 60, no. 7, p. 111.

29580. HATFIELD, H. STAFFORD. A heat-flow meter. (Journal of physiology, 1950. v. 111, p. 10P)

Contains a description of an apparatus which measures directly the strength, in thermal units, of a current of heat per unit area and unit time. It registers heat loss by both radiation and convection. The way in which the device works and its possible uses for physiologists, are explained. **Copy seen:** DLC.

29581. HATT, GUDMUND, 1884- . Early intrusion of agriculture in the North Atlantic subarctic region. (Alaska. University. Anthropological papers, 1953. v. 2, no. 1, p. 51-107) 115 refs.

Contains a survey of Norse colonization activities, introduction of cattle breeding and agriculture in Helgeland, Scottish islands, The Faroes, Iceland, and finally Greenland (p. 79-99). Early Norse and

Swedish domination of the Lapps (p. 57-60), exaction of tribute (peltry, hides, ship ropes, feathers) and economic interest in reindeer breeding are noted. The origin and forms of Lapp reindeer breeding is discussed: dairy production, transport; its Scandinavian origin but few Scandinavian traits. Norsemen's colonization of Greenland is treated in detail: their voyages to Vinland and Markland, forms of production (chiefly cattle breeding, supplemented by sealing and walrus hunting), their means of maintaining good pasturage, building warm stables, getting wood and iron, their commercial relations with the homeland, etc. The Norse colonists' relations with the Eskimos, their slight cultural influence upon the latter, climatic change as cause of the downfall of the Norse settlements in Greenland and of a new (present-day) agricultural impulse in the sub-Arctic, are among the topics discussed.

HECKER, N. L. See Gekker, Naum Leont'evich, 1861-1920.

29586. HEDBERG, OLOV, and others. Botanical investigations in the Pältsa region of northernmost Sweden, with an account of its geology and geomorphology. Lund, Gleerup forl., 1952. 209 p. illus. (Botaniska notiser. Suppl. vol. 3, no. 2) 147 refs. *Other authors:* Olle Martensson and Sten Rudberg.

Chap. 1. A brief account of botanical exploration in the Pältsa area, by O. Martensson (p. 7-13) contains historical notes on exploration trips of various Scandinavian naturalists (Göran Wahlenberg, L. L. Laestadius, C. P. Laestadius, H. Möller, etc.) to the Pältsa region close to the Norwegian Balsfjord, approx. 69° N. 20° E. (text map, p. 16).

2. Some observations on the geology and morphology of the Pältsa area, by S. Rudberg (p. 14-44) contains data on the petrology, tectonics, morphology, and Quaternary deposits of the region, and discussion of whether or not the Pältsa peaks have been ice-free (the "nunatak problem"): bibliography (50 items).

3. Vegetation, by O. Hedberg (p. 45-73) contains discussion of the vegetation belts, habitat factors, plant communities, differentiation of *Dryadion*, the *Empetrium* - *Myrtillion* complex and five tables of comparative vegetation analyses of the Pältsa area and other Scandinavian regions.

4. List of vascular plants, by O. Hedberg (p. 74-115) is an annotated list of about 300 species with data on habitat, ecology and local distribution.

5. A contribution to our knowledge of the moss flora of the Pältsa area, by O. Martensson (p. 116-98) contains a systematic annotated list of 109 liverworts and 226 mosses, with data on abundance, habitat, ecology and localities.

Some remarks on the geographic names, by O. Martensson (p. 199-201) and a comprehensive bibliography complete the study.

Contains a description of 14 species of pycnogonid crustaceans collected by Capt. Robt. A. Bartlett on the coast of Greenland and in the Foxe Nasin up to 1935. Localities, distribution, synonyms, and zoogeographical remarks are included. Most of the collection is in the U. S. National Museum.

Copy seen: DLC.

29589. HEDGPETH, JOEL WALKER, 1911- . The United States Fish Commission Steamer *Albatross*. With an appendix by Waldo Schmitt. (American Neptune, Jan. 1945. v. 5, no. 1, p. 5-26, plate)

The former marine research steamer *Albatross* of the U. S. Fish Commission, the first vessel built especially for marine

research by any government, was launched in Aug. 1882. Her forty years at Government service included many trips to Bering Sea and the North Pacific between 1888 and 1912. Although the primary purpose of these voyages was the investigation of the fisheries resources and fishing grounds, the *Albatross* was also used for hydrographic work in Bering Sea, in the investigation and patrol of the Pribilof Islands seal herd, and for occasional ethnographic surveys. The vessel is described here and her record given.

Appendix by W. L. Schmitt presents a detailed annual chronology of the *Albatross* from 1882 to 1928. She was de-commissioned by the U. S. Bureau of Fisheries in 1921 and sold in 1924. Thereafter she was used as a school ship until 1928 when the crew's demand for wages forced a tie-up in Hamburg, Germany. No record of the *Albatross* is available after this.

29590. HEDIN, NABOTH. Sweden's iron mountains. (American-Scandinavian review, June 1940. v. 28, no. 2, p. 129-34, 2 illus.)

Contains description of the mining industry at Kiruna (67°51' N. 20°13' E.); mining development in the last 40 years; the Grängesberg Co. exploitation of these iron mines, technical equipment, production (12,685,151 tons in 1938), economic importance of the mines for Sweden, earnings and living conditions of the miners, etc. **Copy seen:** DLC.

29591. HEDTOFT, HANS. Baggrunden for nedsaettelsen af den store Grønlandskommission. (Grønland, 1952? hefte 1, p. 13-17, illus.) **Title tr.:** Background for establishing the great Greenland Commission.

Contains brief popular account of circumstances of the post-war undertaking to revise the constitutional laws and administration of Greenland. Author visited the country in 1948 as Danish prime minister, and found Greenlanders ready to assume equal rights and responsibilities with Danes. The Greenland Commission of 1950 recommended various changes in government, economic and social life on the principle of "Greenland for the Greenlanders." The results of the reorganization are still to be seen, but the trend seems favorable and

fisheries are indicated as the main industry of the future.

29594. HEINTZ, ANATOL, 1898-. Noen iakttagelser over isbreenes tilbakegang i Hornsund, V. Spitsbergen. (Norsk geologisk tidsskrift, 1953. v. 31, p. 7-36, illus., 4 sketch maps. Also pub. as: Norsk Polarinstitutt. Meddelelser, 1953. No. 73) 12 refs. **Title tr.:** Some ob-

servations on the retreat of the glaciers in Hornsund, West Spitsbergen.

Contains the results of field work in summer 1949 by a Norsk Polarinstitutt party of four, and a study of maps and aerial photographs of the Hornsund fiord region (76°50' N. 15°30' E.), made during 1900-1949. In 1900 one large glacier fed the upper part of Hornsund. Between 1900 and 1949 retreat of the glacier freed 30 sq. km. of land, and the large glacier became six smaller ones. Steps in the retreat on Treskelodden, a tongue of land covered by the Horn glacier in 1900 and ice-free in 1949, are shown on a series of maps. Present evidence of the retreat, moraines, glacial striae, melt-water deposits, fossil ice, and strandlines (showing former presence of an ice-dammed lake), are described in some detail. Shells of marine molluscs found in morainic material from the beach to the high ridge of Treskelodden were probably transported there by the glacier and do not represent marine deposits. Summary in English.

29595. HELK, J. V., and M. DUNBAR. Ice islands: evidence from North Greenland. (Arctic, Dec. 1953. v. 6, no. 4, p. 263-71, 8 illus., text map) ref.

Contains discussion of eight air photographs (from the Danish Geodetic Institute) of three regions of northern Greenland: (1) Sherard Osborn and Victoria Fjords on the north coast; (2) Kronprins Christians Land and Independence Fjord on northwest coast; and (3) east coast 78°-80° N. The glacial ice shown in some areas is similar in appearance to the Ellesmere Ice Shelf, and it is suggested that in the recent geologic past, the same icecap covered both areas. Land ice has since disappeared leaving a relic fringing the coast which may break away only when the sea ice around it moves out. The Ellesmere coast retains more fringing ice than does the North Greenland coast.

29596. HELLAND-HANSEN, BJØRN, 1877- . Oseanografiske undersøkelser i Norskehavet og Atlanterhavet. Vegaforedrag, 24 april 1941. (Ymer, 1941. Årg. 61, hæfte 3, p. 161-73, 6 illus. incl. charts) **Title tr.:** Oceanographic investigations in the Norwegian Sea and the Atlantic Ocean. The *Vega* log for April 24, 1941.

Contains lecture delivered on the occasion of the conferring of the Vega medal upon the author Apr. 24, 1941, by the Swedish Association for Anthropology and Geography. He reviews major physical oceanographic work in these areas from the *Michael Sars* expedition of 1900-1901 in which he participated as assistant to Johan Hjort. His results published jointly with Hansen (*Arctic Bibliography*, No. 6923) shed new light on physical and dynamic conditions of the ocean; particularly with regard to vortexes with vertical axis and indications of wave formations in the Gulf Stream. A schematic chart for the upper couple of hundred meters of the Norwegian Sea was constructed. Contributions of V. W. Ekman, V. Bjerknes, J. W. Sandström, and work aboard the research vessel *Johan Hjort* 1930 (in southern waters) and 1935-36 in Norwegian Sea are summarized. Author's formula for computing some mean speed components for gradient currents is noted. The international investigations in the Atlantic Ocean 1938, which he suggested (Sept. 1936), are outlined.

29603. HELLGREN, GÖSTA, and JOHAN MEOS. Localization of aurorae with 10 m high power radar technique, using a rotating antenna. (Tellus, Aug. 1952. v. 4, no. 3, p. 249-61, illus.) 11 refs.

"The paper describes the 10 m high power recorder with a rotating antenna that is used since May 1951 for the localization of aurorae at the Radio Wave Propagation Laboratory of the Kiruna Geophysical Observatory (Northern Sweden) 67°8' N. 20°5' E.). Continuous observations during the time of May 1951-March 1952 have disclosed periods of auroral activity. The preliminary results from these observations indicate that there is a good correlation between the auroral activity, the magnetic activity, and the appearance of the N₁-layer, a special type of sporadic E ionization often appearing in connection with magnetic bays and supposed to be caused by the same ionizing agent as the aurora. The distribution in range and bearing of the recorded aurorae agrees with the simple theory that most of the radio wave scattering comes from those points where the radar beam is perpendicular to the surface of the auroral discharges. The calculated height distributions of the reflection centres have maxima around 120 km."—*Meteorological abstracts and bibliography*, June 1953. v. 4, no. 6, p. 730.

Copy seen: MH-BH.

29604. HELLPACH, WILLY HUGO, 1877- . *Geopsychie; die Menschenseele unter dem Einfluss von Wetter und Klima, Boden und Landschaft.* 6. verb. Aufl. Stuttgart, F. Enke, 1950. 271 p. 13 fig. **Title tr.:** Geopsychie; the human psyche under the influence of weather and climate, soil and landscape. First published in 1911 as *Die geopsychischen Erscheinungen*, this work appeared with title as above in the fourth edition. It is also published in French: *Géopsychie, l'âme humaine sous l'influence du temps, du climat, du sol, et du paysage*, 1944.

Contains a comprehensive study on the effects of the natural environment on the psyche. The influence of the elements of weather and climate are discussed first, including: extreme cold and heat, humidity, winds, solar radiation, air pressure, air composition and electricity. This is followed by discussion of regional and other types of climate; including the subarctic (p. 85-88), and the high-altitude

climate (p. 96-103), and by sections on: psychological reactivity and acclimatization to climate; the psychological effect of the seasonal and diurnal changes; the effect of the moon and other "cosmic rhythms;" artificial climate. Soil and landscape are discussed in separate sections and the last chapter deals with problems of climatic hygiene (proper régime, clothing, housing, etc.

Contains a report on experiments on the influence of corticotrophic hormone on the cortin content of blood and adrenals of rats, including such kept at low temperature. The cortin content in the blood of animals exposed to cold rose considerably more than in those kept at room temperature.

Copy seen: DLC.

29609. HEMSTOCK, RUSSELL A. Some northern lights on oil development. (Petroleum engineer, Feb. 1953. v. 25, no. 2, p. A41-A44, illus. map, diagr.)

"Roads and airports are needed to develop oil resources in the Northwest Territories. Special construction methods are required in permafrost regions for satisfactory results. Roads are constructed by packing moss and scrub from the roadside on undisturbed moss and covering with a filled subgrade to provide drainage. Two general methods of construction are used in permafrost regions. The active method entails elimination of frost by thawing before starting construction, and is adequate where permafrost is thin, sporadic and ground temperatures

are above 29.5° F. The passive method maintains the permafrost by added insulation and is applied where permafrost is more than 40 ft. deep and ground temperatures are below 25° F. Building sites are selected according to ground texture and structure, ground and air temperatures, and hydrology. The footings of light, temporary buildings are erected on timber pads, or posts on pads. Permanent structures are founded on piles anchored in permafrost at 2.5 times the depth of the active layer. Pipelines have been laid on the surface, but it is recommended that future lines be buried under insulation. Two methods of constructing water and sewer lines are briefly discussed."—SIPRE.

29610. HENDERSON, JAMES FENWICK, 1905-, and **I. C. BROWN.** The Yellowknife greenstone belt, Northwest Territories; preliminary report. Ottawa, 1952. 41 p. fold. map. Mimeographed. (Canada. Geological Survey. Paper 52-28) 12 refs.

Contains detailed discussion of the geology and structure of the bedrock on the west side of Yellowknife Bay, Great Slave Lake. The Archean and Proterozoic sedimentary, intrusive and volcanic rocks are discussed in order of their formation, and details given on the ore-bearing shear zone systems and faults. The ore deposits are not discussed. Accompanying maps on the folded map sheet show general geology and fault systems.

Supplementary maps. The following detailed geologic maps at scale 1 in.: 500 ft., each bearing the title, *Preliminary map Yellowknife, Northwest Territories*, and together covering 62°22' N.-62°37' N. at the 114°20' W. long. meridian, were prepared by the authors for use with this report: sheet 1-2 (Canada. Geological Survey. Paper 48-17 pub. 1948); sheet 3 (*Its:* Paper 49-26 pub. 1949); sheet 4 (*Its:* Paper 50-34 pub. 1950); sheet 5 (*Its:* Paper 52-24 pub. 1952).

29611. HENNIG, RICHARD, 1874- . Das Ende der Normannenkolonie in Grönland; ein geschichtliches Rätsel. (Vergangenheit und Gegenwart, 1937. Jahrg. 27, Heft 6, p. 317-21) *Title tr.:* The end of the Norsemen's colony in Greenland; an historical riddle.

Contains an historical sketch of the two Norse colonies in West Greenland, found-

ed by Erik the Red from Iceland in 982 near the Godthaab and Julianehaab of today. The two colonies are said to have flourished for centuries with a population of about 5,000; yet by about 1540 the Norse settlers in Greenland had become entirely extinct without an obvious cause. Recent excavations of the Norsemen's graves (at Herjolfsnes) suggest that the physical degeneration, caused by climate and inbreeding, may explain the riddle. It is also possible that some of these Norsemen migrated further to the West. The mysterious Tunits of Labrador and Baffin Island, and the "blond Eskimos" of Victoria Island were probably, it is suggested, of Norse origin.

29614. HENRY, JAMES PAGET, 1914-, and **O. H. GAUER.** The influence of temperature upon venous pressure in the foot. (Journal of clinical investigation, July 1950. v. 29, no. 7, p. 855-61, illus., table) 28 refs.

Contains an account of experiments on 12 normal male subjects, with cold (or heat) administered by foot bath or by placing the subject in an air-conditioned room. Venous pressure in the foot at erect posture was found to depend on the rates at which blood flows into the veins

from the arteries and is removed from them by muscular activity. In cold environment even normal, involuntary postural movements reduce pressure to 50 mm. Hg, a level approximating that of the counter-balancing osmotic and tissue pressures. **Copy seen:** DSG.

29615. HENRY, T. J. G. A comparison of mean temperatures obtained with Canadian and American types of radiosondes. Ottawa, Nov. 1951. 17 p. illus. tables. (Canada. Meteorological Division. Circular 2041, Tec. 103) refs.

"Canadian type radiosondes are used at eight stations in Canada (Aklavik, Baker Lake, Coppermine, Fort Nelson, The Pas, Port Hardy, Moosonee and Sable Island). A comparison of the accuracy of Canadian and U. S. type radiosondes was made by plotting mean temperature at 300, 500 and 700 mb levels on maps for each month in four-year period 1946-49, drawing isotherms based on U. S. radiosonde data from U. S., Canada, Alaska, and Greenland, and computing amount of temperature and height difference resulting. At night, the Canadian radiosonde gave consistently higher temperatures than the U. S. type, indicating greater lag. Daytime ascents showed greater radiation error in Canadian instruments, besides the cumulative lag effect noted at night. However, radiation error is small. Tables are given to permit corrections to be applied to radiosonde data (or charts) for lag, radiation error at various solar altitudes, lapse rates and sky conditions. Theory is elaborated and scatter diagrams presented."—*Meteorological abstracts and bibliography*, May 1953. v. 4, no. 5, p. 568.

tr.: Geographic-pathological problems concerning Norrland.

Contains an account of the frequency and distribution of disease in this northern Swedish province, (66°-69° N. lat.) with a relatively stable population. Vital statistics show a high child mortality, which in some areas is three times as high as the country's average. Diseases due to lack of vitamins (anemia, rickets) are also frequent among children. Diseases frequently met are those of an endogenous, hereditary character (mental diseases, congenital myotonia, etc.) or of a degenerative nature (muscular atrophy, rheumatoid diseases). Of several infectious diseases discussed (leprosy, venereal diseases, tularemia), tuberculosis holds the first place with the highest mortality in Sweden. The history of the disease in the area, its incidence, etc., are also dealt with.

Contains a study of discharges of cold and warm fibers in the lingual nerve of the cat, in response to application of menthol solutions and to controlled thermal stimuli. The substance caused strong discharge of the cold receptors at warm temperatures, and an increase of the cold impulses at low temperatures. Means of compensating the effect of menthol, thresholds of its effects, etc. were also studied.

Copy seen: DSG.

29619. HENSEL, HERBERT, and Y. ZOTTERMAN. The persisting cold sensation. (*Acta physiologica scandinavica*, Apr. 1951. v. 22, p. 106-113, 3 illus.) 10 refs.

Contains a study of after-sensation of cold in the cat, performed with precise electro-physiological methods. The experiments showed that after-sensation of cold is due to "a true, adequate stimulation of the cold receptors by the prevailing low temperature" and that below a certain temperature (21° C.) cold impulses are always present, whether the temperature rises or falls.

Copy seen: DSG.

29620. HENSEL, HERBERT, and Y. ZOTTERMAN. Quantitative Beziehungen zwischen der Entladung einzelner Kältefasern und der Temperatur. (*Acta*

physiologica scandinavica, Sept. 21, 1951. v. 23, fasc. 4, p. 291-319, illus.) 35 refs. **Title tr.:** Quantitative relations between the discharge of single cold-fibrils and the temperature.

Contains an account of experiments and observations on the action potentials of single, specific cold-fibrils of the cat's tongue exposed to controlled thermal stimuli. The conditions at various, constant temperatures (including low temperatures) as well as with change of temperature were studied in detail. The results, which do not tally with any of the current theories of temperature sense, are discussed. **Copy seen:** DSG.

29621. HENSEL, HERBERT, and Y. ZOTTERMAN. The response of mechanoreceptors to thermal stimulation. (Journal of physiology, Sept. 1951. v. 115, no. 1, p. 16-24, illus.) 13 refs.

Contains an account of experiments performed on the mechanoreceptive areas of the cat's tongue. It was found that the mechanoreceptors are stimulated by cooling. Action potentials in response to application of cold, pressure, etc., to several kinds of receptors are presented and discussed. **Copy seen:** DSG.

29622. HENSEL, HERBERT, and Y. ZOTTERMAN. The response of the cold receptors to constant cooling. (Acta physiologica scandinavica, Apr. 1951. v. 22, p. 96-105, 6 illus.) 7 refs.

Contains a study of action potentials in the cold fibers of the lingual nerve of the cat and dog, when constant temperatures are applied to the tongue. At temperatures below 23° C. the impulses did not cease when the tongue temperature became constant, but persisted throughout the investigation (one hour). Upon rewarming the tongue, the impulses ceased. The results show that constant temperature can produce prolonged stimulation of thermo-receptors and that excitation of thermo-receptors is probably possible even without external physical energy. **Copy seen:** DSG.

Contains a study of geographic races of the shore larks of the United States, with descriptions of eight races in relation to the area they occupy, their comparative diagnoses, including *Otocorys alpestris*, native to northeastern North America, Labrador and Greenland and *O. a. leucolaema* inhabiting Alaska, and descriptions of five new varieties of *O. alpestris*. **Copy seen:** MH-Z.

HEPNER, GEORGES, see Herman, R., and others. Processes of emission of the molecular and atomic spectra of nitrogen . . . aurora. 1952. No. 29628.

29624. HEPNER, JAMES P., and others. The association of absorption and Es ionization with aurora at high latitudes. (Journal of geophysical research, Mar. 1952. v. 57, no. 1, p. 121-34, illus., tables) 8 refs. **Other authors:** E. C. Byrne, and A. E. Belon.

"Nocturnal Es ionization and 'no echo' occurrences, as recorded on Hf records, have been classified according to the absence or presence of aurora and to its form when present in the zenith areas. The analysis supports the following generalizations: (1) Es ionization increases at successively greater heights as aurora approaches the College [near Fairbanks, central Alaska] zenith from the north. (2) In the presence of different nonpulsating auroral forms, the Es ionization varies with changes in auroral form in a manner similar to the change in luminosity. Likewise, variations in the height of maximum ionization parallel variations in auroral heights. (3) Complete absorption is only slightly more frequent during non-pulsating aurora than during absence of aurora but prevails in the presence of pulsating aurora. Geomagnetic relationships are discussed."—*Meteorological abstracts and bibliography*, Feb. 1953. v. 4, no. 2, p. 184.

29640. HILDÉN, KAARLO, 1893-. Some aspects of the physical anthropology of Finland. (Baltic and Scandinavian countries, May 1937. v. 3, no. 2, p. 232-37) 12 refs.

Contains sketch of the history of colonization in Finland, Finnish anthropological data, and a review of racial elements in that country. The Finns arrived in their present territory about 100-600 A. D. and found wandering groups of nomadic Lapps who had possibly been already settled in the land during the stone age. The East-Baltic race constitutes the most important element in the population of Finland; the elements of Nordic race have been brought into the country by Swedes; the Lappish racial element is evident among the Finns in northern and eastern parts of the country, although weakly represented. Lapps were the first inhabitants of this area, and as late as the 14-15th centuries, historical documents refer to scattered Lapp families in central, and in northern and eastern Finland at an even later date. At the present time, about 2,000 Lapps live in the northernmost districts of Finland and only a few decades ago there were Lapp families immediately to the east of its eastern frontier, on the Russian side. **Copy seen:** DLC.

29641. HILDÉN, KAARLO, 1893-. Some aspects of the physical anthropology of Finland. (In: Congrès International des Sciences Anthropologiques et Ethnologiques. 1st, London, 1934. Compte rendu, p. 129-30)

Contains some conclusions as to the racial composition of Finns: the principal racial element is the East Baltic race; the Nordic race component is important, too; other racial elements are comparatively feebly represented, and the idea extensively held in the past as to the connection of the Finns with the Mongolian race cannot be substantiated.

Copy seen: DLC.

29645. HINES, EDGAR ALPHONSO, Jr., 1906-, and G. E. BROWN. Cold pressor test for measuring reactivity of blood pressure; data concerning 571 normal and hypertensive subjects. (American heart journal, Jan. 1936. v. 11, p. 1-9, fig., 2 tables) 7 refs.

Contains a report on the results of a simple, standard test. According to it, normal persons are divided into those with minimal reactions of blood pressure and those with excessive responses. Ninety-eight percent of persons with essential hypertension show abnormal ranges and abnormal maximal responses to the test. A correlation between the range of the response and the maximal rise of blood pressure was found. The reaction is constant and is apparently based on a generalized vascular constriction initiated through a neurogenic reflex arc.

Copy seen: DLC.

29646. HINES, EDGAR ALPHONSO, Jr., 1906-. Reaction of the blood pressure of 400 school children to a standard stimulus. (American Medical Association. Journal, 1937. v. 108, no. 15, p. 1249-50, table) 4 refs.

Contains report on the cold pressor test performed on 400 school children. 18 percent were hyperactive in both systolic and diastolic blood pressure, the incidence of hyperreactors being the same in various age groups. Reaction of blood pressure increased during pre-puberty and puberty; in children the reaction of the diastolic pressure was much greater than in adults.

Copy seen: DLC.

29647. HINES, EDGAR ALPHONSO, Jr., 1906-, and G. E. BROWN. A standard test for measuring the variability of blood pressure: its significance as an index of the prehypertensive state. (Annals of internal medicine, Aug. 1933. v. 7, no. 2, p. 209-217, 5 illus., 2 tables) 7 refs.

Contains the original description of the "cold pressor test" and the results of its application in 230 normal and diseased subjects. At least some 98 percent of persons with essential hypertension showed excessive reaction to the cold test; the latter was found useful in determining the efficacy of therapeutic controls of vasomotor irritability.

29649. HINZ, JOHN, 1874?- . Grammar and vocabulary of the Eskimo language, as spoken by the Kuskokwim and southwest coast Eskimos of Alaska. Bethlehem, Pa., The Society for Propagating the Gospel, The Moravian Church [1944]. xiii, 194 p.

Contains chapters on the alphabet, pronunciation, noun and other parts of speech, with an extensive treatment of affixes, also exercises for the student. Eskimo-English vocabulary of some 3,500 words and expressions follows (p. 139-94). The author, long a Moravian missionary in Alaska, states the grammatical structure of the Eskimo language there to be with but few exceptions, the same as that of Greenland, some words identical and many very similar, but pronunciation to differ considerably from the Greenlanders'. The vocabulary he suggests is incomplete, because prepared from memory 14 years after leaving Alaska, when he was over 70 years old.

29650. HIRN, K. E. Några höjdbestämningsar gjorda i Kuusamo Lappmark, sommaren 1893. (Terra, 1895. v. 7, no. 6, p. 257-62, table) **Title tr.:** Some altitude determinations made in Kuusamo Lappmark during the summer of 1893.

The altitude above sea level of lakes and heights in the Kuusamo region of northeastern Oulu was determined with the aid of an aneroid barometer. The results are compared with the earlier findings of Holmberg, Ignatius, and others. The absolute altitude above sea level of all points was found to be considerably higher. Kuusamojärvi (65°50' N. 29°15' E.), for example, is 277.3 m. above sea level according to Hirn rather than 240.6 m. (Holmberg) and 224 m. (Nordqvist).

29651. HIRSCHBERG, ERICH, and H. P. RUSCH. Comments on recent experiments with frozen and dried tissue as

evidence for the virus etiology of tumors. (Cancer research, June 1950. v. 10, p. 335-38) 28 refs.

Contains a summary and discussion of the work of Gye *et al.* in propagation of mammalian tumors with freezing and drying techniques. The survival of normal and neoplastic cells after exposure to low temperatures is pointed out and the use of freezing (even with subsequent drying) does not exclude a survival of some cells.

Copied seen: DLC.

29652. HIRSH, JOSEPH. Comfort and disease in relation to climate. (U. S. Dept. of Agriculture. Climate and man, yearbook of 1941, p. 237-45) 10 refs.

Contains a general discussion on the effects of climate and climatic elements on man's physiology, comfort and health. Cold and heat, humidity, winds, sunshine, weather changes, etc. are dealt with, as well as the physiological responses to them and mechanisms of adjustment. The direct ill effects of extreme climates and climatically conditioned diseases are summarized.

Contains a report on the pressor response to cold in morphine addicts, post-addicts and normal controls. It was found that this response in addicts is greater than normal and the recovery slower; following withdrawal of morphine the condition slowly returns to normal. The acute effect of the drug in normal persons and in post-addicts is to reduce the blood pressure response to cold and to hasten recovery, an action also exhibited by hypnotics, analgetics, and anesthetics.

29654. HJERL HANSEN, HANS PETER, 1870-1946. Danske pionerer i Sibirien. Efterladt manuskript tilrettet af Finn Hjerl-Hansen; epilog af

Holger Rosenberg. København, Gyl-
dendal, 1949. 334 p. illus., ports., maps
(1 fold.) **Title tr.:** Danish pioneers in
Siberia. Posthumous manuscript edited
by Finn Hjerl-Hansen; with a postscript
by Holger Rosenberg.

A former Danish Minister of Finance
recounts his experiences in Siberia from
1897 to the outbreak of the Russian
Revolution as head of the Siberian
Company, Ltd. (Sibiko), the chief export
commodity of which was Siberian butter.
The company's head office in west Siberia
was at Omsk, but its operations covered
a vast area, from Mongolia in the south
to the mouths of the Ob', Yenisey, and
Lena Rivers in the north. Two chapters
by former colleagues of the author relate
some of the company's activities near and
on the Ob' River, terminating at Obdorsk,
just below the Arctic Circle. The author
gives a survey of the economic life of
Siberia from about 1896 to 1926 and
includes incidentally considerable in-
formation on the social life and customs
of native peoples, Ostyaks, Samoyeds,
as well as more southerly groups. Numer-
ous photographic illus.

**29655. HJORTZBERG-NORDLUND,
BORJE.** Underground mining trends in
the great Swedish export iron ore mines.
(American Institute of Mining and
Metallurgical Engineers. Transactions,
1952. v. 193, no. 2, p. 187-92, 12 illus.;
pub. in Mining engineering, Feb. 1952.
v. 4)

Describes briefly the geology of the
Kiruna, (67°52' N. 20°15' E.) Malm-
berget (67°10' N. 20°40' E.) and Grän-
gesberg mines in Sweden. Discusses
mining, drilling, blasting, and loading
methods in use at these mines.

graphy in the lower Kuskokwim region,
Alaska. (Geological Society of America.
Bulletin, Dec. 1952. v. 63, no. 12, pt. 2,
p. 1332)

*Contains abstract of a paper presented
at the Apr. 1952 meeting of the Society,
Tucson, Arizona. An area of about
11,000 sq. mi. was mapped on a recon-
naissance basis. Precambrian, early
Paleozoic, Permian, Triassic, Upper
Jurassic(?), Lower Cretaceous, and mid-
dle Upper Cretaceous rocks are briefly
described.*

see Buck, C. W., and others. Temp. reg.
schizophrenia. 1950. No. 28358.

**29657. HOBBS, WILLIAM HERBERT,
1864-1953.** The Greenland glacial anti-
cyclone. (Journal of Meteorology, Sept.
1945. v. 2, no. 3, p. 143-53, 5 sketch
maps, diagrs., tables) 36 refs.

*Contains a summary of the Hobbs
glacial anticyclone theory based upon
observations of expeditions crossing the
inland ice, not upon data from estab-
lished weather stations. Hobbs con-
cludes that Greenland is overlain by a
fixed anticyclone. Air currents descend
in a central cold region of the icecap from
which winds blow outward with forces
varying from near-calm to surges of 100
mph. or more, always downslope in a
fixed direction. Such storms have no
connection with cyclonic disturbances
which, approaching from the west, are
diverted north by the anticyclone and
prevented from crossing the icecap.
Snow precipitation is "frequent and
heavy," taking place within the near-
surface air layer as fine crystals, its
source "fine needles of the cirri" brought
down by descending air currents, melted,
vaporized, and again "separated out."
Summer meltwater deposits are dried
and blown in winter by the anticyclonic
surges to form a peripheral loess belt
beyond the glacier. The Greenland and
Antarctic anticyclones form "poles of the
winds" for their hemispheres and control
earth's climatic zones. During the Pleis-
tocene similar conditions existed over the
continental glaciers. Previously listed as
Arctic Bibliography, No. 22636.*

**29658. HOBBS, WILLIAM HERBERT,
1864-1953.** Terraced canyons. (Sci-
ence, Apr. 24, 1953. v. 117, no. 3043,
p. 461-63, illus. map) 2 refs.

*Contains a discussion of the great can-
yons recently discovered on the floor of
the Atlantic. In the author's opinion
these were cut by meltwater from a
Greenland glacier much bigger than the
present. To support his view, he stresses
the similarity of the terraces of the lower
Mississippi formed at the same time as
those on the floor of the Atlantic.*

29659. HOCHHE, OTTO. Über Kälte-
schäden und ihre Behandlung. (Monats-
schrift für Unfallheilkunde und Ver-
sicherungsmedizin, 1943. Jahrg. 50,
Heft. 1, p. 299-305) *Title tr.*: On cold
injuries and their treatment.

Deals with the causes of and predispo-
sition to frostbite; occurrence in body
regions; degrees of severity; general
hypothermia; therapy of first- second-
and third-degree frostbite (author's
method, conservative, "dry" treatment,
sulfa drugs, warm air); surgery; late
treatment. *Copy seen*: DSG.

veränderungen nach localer Kältewirkung.
(Virchows Archiv für pathologische
Anatomie und Physiologie und für
klinische Medizin, 1898. Bd. 154, Heft
2, p. 320-34, 6 col. illus. on fold. plate
9 at end of Heft 2) 11 refs. *Title tr.*:
On tissue changes following local exposure
to cold.

Contains a macro- and microscopic
study of the liver and kidney of rabbits
made at various intervals after these
organs were subjected to experimental
frostbite. Cellular and vascular changes,
hemorrhages, leucocytosis were common
to both organs. The differences between
them as well as the restorative processes
are also discussed. *Copy seen*: DSG.

29661. HOCK, RAYMOND J., and others.
Composition of the ground-level atmos-
phere at Point Barrow, Alaska. (Journal
of meteorology, Dec. 1952. v. 9, no. 6,
p. 441-42) 11 refs. *Other authors*: H.
Erikson, W. Flagg, P. F. Scholander,
L. Irving.

Contains results of one series of ex-
periments conducted in the course of
studies on aspects of respiratory phys-
iology. "A series of some 350 analyses
of the atmospheric air at ground level
was undertaken at Point Barrow, from
October 1947 to March 1949. Within
the accuracy of the method (± 0.015
percent), the carbon dioxide and the
oxygen concentrations were found to be
constant through the seasons and within
the standard values from temperate
regions." *Copy seen*: CaMAI.

temperatures of the black bear during
its "hibernation." (In: Alaskan Science
Conference. . . . 1951. Proceedings,
pub. 1953, p. 310-12)

Contains an account of several rectal
temperature measurements on a tame

yearling female living at Anchorage,
Alaska, under conditions approaching
wild state. The temperatures observed
(31.3° C. and 34.0° C.) support the
known fact that the bear is not a true
hibernator. *Copy seen*: CaMAI; DLC.

zur Histologie der Erfrierung. (Mün-
chener medizinische Wochenschrift, 1896.
Jahrg. 43, nr. 15, p. 341-43)

Contains an account of histological
observations on frostbitten tissue from
three different levels: the gangrenous,
the demarkation, and the erythematous
zone. Frostbite is found to be a highly
inflammatory process combined with
regressive phenomena and formation of
several kinds of thrombi. The latter are
considered to be the main causes of
gangrene. *Copy seen*: DSG.

29664. HODARA, MENAHEM. Beitrag
zur Pathologie der Erfrierung. (Derma-
tologische Wochenschrift, 1896. Bd. 22,
nr. 9, p. 445-58, 15 col. illus., on plates
6-7 foll. p. 496) *Title tr.*: Contribution
to the pathology of frostbite.

Contains a histological study, by specific
methods, of frostbitten regions in man
and rabbits. The latter were examined
at various time intervals following
experimental injury. Inflammation,
changes in blood with formation of various
types of thrombi were observed. The
latter are considered the main cause of
necrosis and of other pathological tissue
changes. *Copy seen*: DSG.

ommended field crops. 1953. No. 27686.

29666. HOEL, ADOLF, 1879-, and others. Bjørnøya; med bidrag av Gabriel Smith. Kristiania, A. W. Brøgers boktrykkeri a/s, 1918. 2 p. l., 59, [1] p. 33 illus. (incl. maps, tables, diagrs.) 4 fold. plans. Other authors: A. Kvalheim and Claus Schive. *Title tr.*: Bjørnøya (Bear Island); with a contribution by Gabriel Smith.

A general survey of Bear Island (74°20'-74°30' N. 18°50'-19°21' E.), which is a part of the Norwegian possession of Svalbard, is presented by Adolf Hoel, who discusses its topography, geology, climate, and permafrost and ice conditions. The coal resources of the island are described, and the results of a number of chemical analyses of coal samples are given. Deposits of lead glance and fire clay are also present. Kvalheim and Schive outline a plan for opening up new mines, expanding coal production, and developing transportation and harbor facilities. Smith offers suggestions for the construction of a coal-loading pier in Sydhamna (74°23' N. 19°15' E.).

29667. HOEL, ADOLF, 1879-. Flateinnholdet av breer og snøfonner i Norge. (Norsk geografisk tidsskrift, 1953. Bd. 14, Hefte 1-4, p. 109-123) *Title tr.*: The area of glaciers and snow drifts in Norway.

"The development and present recession of glaciers, initiated in 1740-1743, are discussed. Records maintained in Norway for the past 100 yr. indicate that increased air temperatures are concurrent with glacier recession. Tabulated data, based on Helland's calculations (1893-1920), show that 5045 sq. km. or 1.6 percent of Norway are covered by permanent snow and ice. More recent calculations are about the same."—SIPRE. The ice- and snow-covered areas in Finnmark, Troms, Nordland and Nord Trøndelag are given in sq. km. The principal glaciers in Norway are listed with area, investigations, etc.; and recent area calculations of Svalbard and Jan Mayen (also antarctic) glaciers are presented.

29669. HOELSCHER, BERNHARD. Morphological changes of adrenal cortex in frostbitten rabbits with and without heparin treatment. (Archives of pathology, Oct. 1951. v. 52, no. 4, p. 378-83, fig.) 8 refs.

Contains a study of the histological changes in the adrenal cortex of male rabbits partly exposed to cold, with and without subsequent heparinization. An increase was found in the weight of the adrenal, directly related to the degree of cold injury and accompanied by a loss of body weight. Degenerative changes of the adrenal cortex followed severe cold injury, changes which were further exacerbated by heparin treatment. In non-exposed animals, heparin administration caused a slight weight increase of the adrenals.

29670. HØYGAARD, ARNE, 1906-. Im Treibeisgürtel; ein Jahr als Arzt unter Eskimos. Braunschweig, G. Westermann, [1940] 127 p. illus., 21 plates, map on lining papers. *Title tr.*: In the belt of drift ice; a year as doctor among the Eskimos. Translation of his *Innen for drivisen*, 1937 (copy Mn-U).

Contains narrative by the leader, of the Norwegian Medical Expedition 1936-37 to Angmagssalik (65°50' N. 37° W.), East Greenland. Its genesis, composition and preparation, the itinerary and local trips are described, also the building of the laboratory and workshop at Angmagssalik. Eskimo psychology, beliefs, religion, legends; daily life and habits; bears and bear-liver poisoning of the author (p. 66-72); starvation in Angmagssalik; hunting; diseases and Eskimo medicine (p. 87-94); arctic hysteria (p. 94), etc. are dealt with. The aim of the expedition was to study the nutrition and life conditions in pure Eskimo settlements and the effect of their peculiar diet on their physiology.

29671. HOFFMAN, WALTER JAMES, 1846-1899. Comparison of Eskimo pictographs with those of other American aborigines. (Anthropological Society of Washington. Transactions, 1883. v. 2, p. 128-46, 12 illus.)

Eskimo and Indian drawings on wood, and ivory carvings from Alaska (intended to convey a message to another person) are compared with rock paintings of Southern California Indians and drawings on tree bark by the Ojibway Indians. The Alaskan material is from the Alaska Commercial Company's museum in San Francisco, and from drawings by an Alaskan Indian in that city in 1882. The pictographs are explained in the phrases of the Kiatexamiut Eskimo of South Alaska, with literal English translation, the author being aided in his interpretations by a mixed-blood Kodiak Islander also in San Francisco at the time the study was made. The author finds the Eskimo pictographs superior to those of the Indians. **Copy seen:** DLC.

29672. HOLDAR, C. G. Problemet Torne-issjön. (Geografiska annaler 1952. Årg 34, häfte 1-2, p. 73-88, 5 fig., map., col. plate) 44 refs. **Title tr.:** The problem of the glacial lake Torneträsk.

Contains observational data to support author's theory that the glacial lake Torneträsk postulated by Otto Sjögren never in fact existed. It is shown that the last remains of the land ice became isolated and melted as dead ice in the valley of Torneträsk (68°-69° N. lat.). The general conception of the final stage of the land ice, including Sjögren's theory, no longer holds. Summary in English.

29673. HOLDHAUS, KARL, and others. Kritisches Verzeichnis der boreoalpinen Tierformen (Glazialrelikte) der mittel- und südeuropäischen Hochgebirge. (Wien. Naturhistorisches Museum. Annalen, 1912. Bd. 26, no. 3-4, p. 399-440) **Other authors:** Vincenz Brehm, Franz Klapalek, Eduard Reimoser, O. M. Reuter, F. Ris, P. Speiser, A. Wagner, Karl Walter, and H. Zerny. **Title tr.:**

A critical list of boreo-alpine animal forms (glacial relicts) of the central and south European highland.

Contains a systematic list of animal forms (worms, crustaceans, insects, butterflies and moths, beetles, molluscs, birds and mammals) occurring as glacial relicts in the mountainous regions of central and southern Europe, with data on total distribution and mode of life of each species. Many species now native to northern regions of Europe, Asia and North America appear in the record. The work was prepared by a group of specialists under direction of K. Holdhaus. Further data were published by V. Székessy, *Ein neuer Fall*, 1934 (*Arctic Bibliography*, No. 26580).

29675. HOLLIN, JOHN T. Oxford and Cambridge Expedition to North East Land, 1951; notes on equipment and methods. (Oxford University Exploration Club. Bulletin no. 5, 1952. p. 14-19).

Contains an account of equipment and supplies used by a 17-man expedition led by J. M. Hartog and W. B. Harland, July-Aug. 1951. The Oxford party of five made a topographic and glaciological survey, including the whole ice-free area of Nordaustlandet, and studied the temperature régime of the Bråsvellbreen section of the icecap down to 100 feet below the surface. The Cambridge party of seven worked on the pre-Devonian complex of Ny Friesland, making a topographic survey of 600 square miles, and studied glaciers, raised beaches, and soil polygons. The remaining five men were Royal Marines in charge of the boats and various reconnaissance work.

Supplies and equipment described include clothing, transport for sea and land, base and (in detail) sledging rations, cooking and camping equipment, first aid. Care and operation of boats

used for coastwise journeys, and sledges and other equipment in overland work, are described in some detail.

29681. HOLMES, JOHN F., and L. V. WORTHINGTON. Oceanographic studies on Project Skijump II. Woods Hole, Mass., Apr. 1953. 11 p. illus. 3 text maps, graph, table. Mimeographed. (Woods Hole, Mass. Oceanographic Institution. Technical report. Reference no. 53-23) 5 refs.

Project Skijump II, March 11-27, 1952, continued the oceanographic observations from aircraft on the polar sea ice initiated in spring 1951. Two P2V aircraft were used to refuel the R4D laboratory plane and extend its range. Stations 4-8 were made on the ice of the Arctic Basin north of the Beaufort Sea between approx. 73°-85° N. Methods and equipment are described, observations on ice conditions given, and former expeditions noted. The three main layers of the polar sea (1) North Polar water, (2) Atlantic water, and (3) polar deep water are discussed with reference to temperature, circulation, and salinity.

29682. HOLMES, THOMAS WILBURN, Jr., 1920-. Modern concepts in the treatment of frostbite, with the presentation of a case successfully treated with tetra-ethyl ammonium. (Detroit. Alexander Blain Hospital. Bulletin, Feb. 1948. v. 7, no. 1, p. 12-18, 5 illus.) 14 refs.

Contains information on the occurrence of frostbite among civilians in the United States and Canada, the degrees of frostbite and a critical discussion of anticoagulant therapy, and sympathetic intervention. The ability of the tetra-ethyl ammonium ion to block temporarily the autonomic nervous system, and its successful use in circulatory diseases, is stressed. This is followed by a presentation of a case successfully treated with injections of tetra-ethyl ammonium chloride.

Copy seen: DSG.

29683. HOLST, JOHAN. Winter campaigning. (*In:* Inter-Allied Conferences on War Medicine, London, 1942-1945, pub. 1947. p. 284-89)

Contains an account of military-medical problems in arctic warfare or under severe winter conditions. Transportation in snow-covered country, means of transportation (including reindeer), maintenance of roads, etc., are discussed. Clothing and its rational use is commented on, and standard Norwegian winter equipment listed. The collection, care, and transportation of wounded is outlined.

Copy seen: DLC.

29684. HOLTEDAHL, OLAF, 1885-. Norges geologi. Oslo, H. Aschehoug & Co., 1953. 2 v.: 1118 p. 24 plates (22 fold. in separate portfolio). (Norway. Norges geologiske undersøkelse, nr. 164) bibliog. *Title tr.:* Geology of Norway.

Basic work presenting in detail the geology of Norway. Vol. 1 concerns the Precambrian through Tertiary, and v. 2 Quaternary geology, including the ice age and formation of the present landscape. Under discussion of formations of each age, sections of the country are taken in turn. Substantial treatment is given to Nordland, Troms, and Finnmark.

29685. HOLTEDAHL, OLAF, 1885-. On the oblique uplift of some northern lands. (Norsk geografisk tidsskrift, 1953. Bd. 14, Hefte 1-4, p. 132-39, 2 text maps) 14 refs.

Contains a general discussion and comparison of the Canadian and Baltic shields with emphasis on their similar features. The "symmetrical design" of the region as a whole is pointed out, with Greenland as a central land block and the shields tilted away from it on either side. This design favors the theory that the whole region was once a structural unit which has been fractured and dissected, both the western Scandinavian and the eastern Baffin Island - Ellesmere Island regions being uptilted, the former sloping toward the Baltic, the latter to the Hudson Bay region. Baffin Bay - Davis Strait and the Greenland - Norwegian Sea may be accounted for by the drifting away of the uptilted regions from the central Greenland block. Various continental drift hypotheses and present depth conditions in the Greenland - Norwegian Sea are discussed.

29686. HOLTVED, ERIK, 1899-. Archaeological investigations in the Thule District. (*In:* Congrès International des Sciences Anthropologiques et Ethnologiques. 2d, Copenhagen, 1938. Compte rendu, 1939. p. 305-306)

Contains summary report on archaeological excavations made in northwest Greenland (between 76° and 79° N.) in 1935-37: a total of 55 houses and two areas of kitchen midden were excavated in Inglefield Land, in the region of Marshall Bay and Cape Kent, also some sites at Rensselaer Bay. About 12,000 archaeological specimens were found; the greater part belonging to the Thule and Inugsuk cultures. A large collective find of Cape Dorset culture was discovered on Inglefield Land. A number of objects originating from the old Norsemen were also found there and at Thule. See *Arctic Bibliography* No. 7369 for author's results from these excavations.

11 cross-sections, 3 tables) ref. **Title tr.:** Seismic soundings.

The 1950 seismic program on the inland ice was continued June 14-Aug. 27, 1951, by six-man groups, "Blue" led by A. Joset and "Red" led by the author. Soundings were made over the southern half of the icecap to determine position of the bedrock surface relative to sea level. Equipment, position of seismographs, types of explosives, and seismic methods are outlined. Results of traverses are described in the text, and profiles show ice and bedrock surfaces along each traverse. Preliminary conclusions are drawn as to bedrock topography, ice thickness, speed of longitudinal waves in the ice, of refracted waves in bedrock, and the existence of an east-west fault at about 69° N. (Disko to Scoresby Sund). **Copy seen:** CaMAI.

29691. HOLZAPFEL, RUPERT. Deutsche Polarforschung 1940-45. (Polarforschung, 1951. Bd. 3, Jahrg. 21, Heft 2, p. 85-97) 21 refs. **Title tr.:** German arctic research 1940-45.

Contains a chronological review of German activities in weather service during World War II, particularly as conducted in the Arctic; based in part on unpublished materials. A network of aircraft, sea and land stations as well as automatic weather stations were in operation in occupied and enemy territories as well as in the arctic ice regions. Although their work was primarily collection of weather data for military purposes, scientific research was carried on as circumstances allowed. Twenty missions including those of weather ships are summarized. The development of new improved automatic land- and sea-weather stations is discussed and described briefly. The meteorological network included Trondhjem, Tromsø, Kirkenes, Porsangerfjord, Nordkapp Kemi, Bjørnøya, Bardufoss (whence extensive flights were taken regardless of weather), stations in Svalbard and East Greenland. **Copy seen:** DLC.

29692. HONIGMANN, IRMA, and J. J. HONIGMANN. Child rearing patterns among the Great Whale River Eskimo. (Alaska. University. Anthropological papers, 1953. v. 2, no. 1, p. 31-47) 16 refs.

Contains account of the rearing and education of children among this southernmost Eskimo group (42 families, 190 persons in 1950), inhabiting the southeast coast of Hudson Bay, in the region of Great Whale River. They spend summers in the trading post settlement which they share with Cree-speaking Indian families, and make winter camps on the coast. They live on family allowances from the Canadian government, and by trapping, sealing and ptarmigan hunting. All are members of the Anglican Church; men and some of the women are literate. The material was mostly obtained from the authors' observations (summers 1949, 1950) and was recorded as it occurred; relatively little information came through interviewing. The investigation was supported by grants from the Wenner Gren Foundation. Detailed descriptions are given of: pregnancy and parturition, early care and feeding, induction of affectivity; training for toilet, childhood activities, skill, and social relations; dependence-independence training, discipline, relations of the child with parents and siblings; the illegitimate and orphan child, and illness and treatment of children. **Copy seen:** CaMAI; DLC.

29693. HONIGMANN, JOHN JOSEPH, 1914- . Culture and ethos of Kaska society. New Haven, Yale University Press, 1949. 365 p., 3 text illus., 4 text maps, 12 plates. (Yale University. Publications in anthropology, no. 40) 180 refs.

Contains a study on the contemporary native culture, technical and social, of the Kaska Indians (Yukon Territory-British Columbia border region) with an emphasis on ethos (pattern of culture revealed in emotional behaviors). A new method and an elaborated terminology are applied. The chapter "Ideational culture" treats lore and learning, ethics, religion, reaction to nature, medicine, etc. The chapter "Ethos" includes such topics as egocentricity, utilitarianism, flexibility, emotional isolation, world view and self-view, etc. Autobiographical sketches of five natives are interpreted and evaluated, using a method which was worked out by

the author. He spent several months in 1944-45 among the Kaska at Lower Post (on the Dease River and Alaska Highway) and upper Liard River, B. C. The work is a study in acculturation.

Copy seen: DLC.

29694. HONIGMANN, JOHN JOSEPH, 1914- . Ethnography and acculturation of the Fort Nelson Slave. New Haven, Yale University Press, 1946. 169 p., illus., tables, 3 text maps. (Yale University. Publications in anthropology, no. 33) 125 refs.

Contains a study on the geographical setting, demography, and social culture of a small group of the Slave Indians at Fort Nelson in northern British Columbia near the Alaska Highway. The Slaves are a northern Athapaskan people. The study is in two divisions, the first dealing with the aboriginal technology and society, and the second with the contemporary aspects of the technical and spiritual culture. The primary aim of the study is to demonstrate the configuration of original culture, and the changes occurring in that configuration, following contact with Europeans. The old and new techniques of securing food, of transportation, shelter, technology, dress and adornment, social and community organization, relations with neighbors, religion and beliefs, cycle of life, recreation, adjustment functions, etc., are outlined. A vocabulary, tabulation of aboriginal Slave culture traits and other appendixes are added. The material was collected from informants at Fort Nelson during author's seven weeks' sojourn in June-Aug. 1943.

Contains abstract of a paper presented at the Nov. 1953 meeting of the Society, Toronto, Canada. From a study of fossil flora of early Quaternary interglacial and periglacial deposits, it is suggested that early interglacial intervals were much warmer and more humid than present climate, while early glacial climate had longer warmer summers and

heavier winter precipitation. Investigations should be made in central and northern Alaska. *Copy seen:* DGS.

29698. HOPKINS, DAVID MOODY, 1921- , and J. L. GIDDINGS, 1909- . Geologic significance of Iyatayet archaeological site, Cape Denbigh, Alaska. (Geological Society of America. Bulletin Dec. 1952. v. 63, no. 12, pt. 2, p. 1264-65)

Contains abstract of a paper presented at the Nov. 1952 meeting of the Society, Boston, Mass. "A sequence of late Quaternary climatic fluctuations is recorded at Iyatayet, a stratified archaeological site at Cape Denbigh, Norton Bay, northwestern Alaska." Four layers revealed by excavations are described and a five-stage chronology given from later Wisconsin to the present.

Copy seen: DGS.

29699. HOPKINS, DAVID MOODY, 1921- , and J. L. GIDDINGS. Geological background of the Iyatayet archaeological site, Cape Denbigh, Alaska. Washington, D. C., Smithsonian Institution, June 1953. 33 p. illus., 4 plates, 4 text maps, diagrs., 2 tables. (Smithsonian Institution. Miscellaneous collections, v. 121, no. 11. Its pub. 4110) 29 refs.

Contains description of the site north of Cape Denbigh, Norton Sound, excavated by Giddings in 1948-1950, and a discussion of the late Quaternary climatic fluctuations. Marble bedrock is mantled by several feet of weathered residual material in successive layers. Three culture layers, the Denbigh flint culture, Paleo-Eskimo, and Neo-Eskimo, are recognized and artifacts typical of each are described. An attempt is made to correlate Quaternary climatic changes of this area (inferred from the layer sequence) with those of the Fairbanks area and Seward Peninsula. Evidence indicates that the people of the Denbigh flint culture lived during a warm period 8,000-9,000 (or perhaps more than 12,000) years ago, the Paleo-Eskimos during a warm period 1-500 A. D., and the Neo-Eskimos in a cooler period ("little ice age") 1100-1600 A. D.

Drumlins i nordöstra Norrbotten. (Geografiska annaler, 1951. Årg. 33, häfte 3-4, p. 157-64, 5 illus. incl. map) 18 refs. **Title tr.:** Drumlins in northeast Norrbotten.

Contains description of several glaciated areas in northernmost Sweden in which occur low (6-7 meters high) drumlins, elongated (NE to SW) in the direction of the last glacial flow, and transversely asymmetrical.

The till composing the drumlins studied was mostly sandy. The longer axes of the included pebbles, even in the surface layers, were oriented, by the ice pressure and movement, in the same direction as the drumlins, indicative of continued activity of the ice in the border zone during the recession of the glacier, a condition not always the case in northern Sweden above the highest shoreline. Summary in English.

Copy seen: DLC.

29702. HOPPE, GUNNAR, 1914-

Hummocky moraine regions, with special reference to the interior of Norrbotten. (Geografiska annaler, 1952. Årg. 34, häfte 1-2, p. 1-72, 38 illus. incl. sketch maps, diagrs., fold. col. plate) 61 refs.

Contains the detailed results of field work during the summers of 1949-52 in Norrbotten, northern Sweden, where a variety of morainial forms is found. Forms characteristic of hummocky moraine terrain are (1) ridges 30-35 m. in height, (2) dead-ice hollows, and (3) moraine plateaus. The origin of these features is discussed in terms of specific areas studied, and the terms "dead-ice

moraine" and "ablation moraine" rejected. Observations in regions of present glaciation, including Alaska, West Spitsbergen, Greenland, and Iceland are related to forms found in formerly glaciated areas. The formation of regular patterns (of ridges, valleys, etc.) in the moraine terrain was found to be the result of the glacier's movement over uneven bedrock topography, the type of pattern dependent upon the alignment of crevasses in the glacier into which morainial material was forced. Specific areas are cited to illustrate these features. It is concluded that the hummocky moraine region in interior Norrbotten "cannot be combined into end moraine belts which indicate distinct pauses in the recession of the ice margin," that the slight differences found in bedrock topography cannot account for the uneven distribution of hummocky moraine terrain, and that both this type of moraine and "more even moraine surfaces" may have originated at the same time.

29703. HOPPE, GUNNAR, 1914-

Isrecessionen från Norrbottens kustland i belysning av de glaciala formelementen. Uppsala, 1948. 112 p. illus., maps (1 fold.) (Geographica, nr. 20) **Title tr.:** Ice recession from the coastal regions of Norrbotten as illustrated by the land forms.

Contains a detailed study of terminal moraines in northern Sweden over an area of 3000 sq. mi. between the valleys of the Lule and Råne Rivers (65-66° N. lat.). The study is based on extensive air photographs and author's field observations. Speed of ice movements, melting along the ice front and calving of icebergs are discussed in light of glaciological data from Scandinavia, Greenland and Spitsbergen. End moraines, or "annual moraines," a term coined by De Geer, lack geochronological values and were not found immediately below the highest coast line. Those found above the highest coast line reflect the yearly thinning of the ice which is estimated at 3-5 m. Summary in English.

Copy seen: DLC.

29704. HOPPE, GUNNAR, 1914-

Några exempel på glaciälvial dränering från det indre Norrbotten. (Geografiska annaler, 1950. Årg. 32, häfte 1-2, p. 37-59, 13 illus., incl. diagrs., fold. map) 15 refs. **Title tr.:** Some examples

of glaciofluvial drainage from central Norrbotten.

Contains discussion of the progressive thinning of the inland ice in Sweden as based on field investigations in the northern forest regions, particularly in the eastern part of Gällivare and the immediate surrounding districts. Definite conclusions as to direction of the ice recession require extended observations, but it is obvious that the recession in Gällivare parish was in a northwesterly direction. Summary in English.

29705. HOPPE, GUNNAR, 1914-, and **V. SCHYTT.** Some observations on fluted moraine surfaces. (Geografiska annaler, 1953. Årg. 35, häfte 2, p. 105-115, illus., sketch map, table) 9 refs.

Includes description of the fluted ground moraine in front of the Isfall Glacier, Kebnekaise region, northern Sweden. The glacier is described and the measurements of, and material composing, the moraine ridges are discussed in detail. The fine grain size, high ice content, and shape of the ridges suggests that they were formed by debris "pressed up into cavities in the ice while more or less fluid."

29706. HOPPE, GUNNAR, 1914-. Vägarna inom Norrbottens län; studier över den trafikgeografiska utvecklingen från 1500-talet till våra dagar. Uppsala, Appelbergs boktr., 1945. xx, 345 p., 9 plates, 69 illus., maps (7 fold.). (Geographica, nr. 16) approx. 200 refs. Text in Swedish. Summary in German.

Title tr.: Routes in Norrbotten District; a study of the development of communications geography from the 16th century to the present.

A summary of physical features of northernmost Sweden is followed by a chronological description of the development of routes from 1500 to 1600, 1600-1730, 1730-1850, 1850-1940. In each section, the people of the period, settlements, commercial and industrial life, trades, routes, and traffic along the routes, are discussed. Trails, cycle paths, and local as well as main roads and bridges are included in the study. Lappmark is treated in detail throughout.

29714. HOWELLS, WILLIAM WHITE, 1908-. Physical types of the Northeast. (In: Johnson, F., ed. Man in northeastern North America, 1946, p. 168-77, plate, table)

Contains a discussion on racial affinities in northeastern North America, based on examination of crania in the Peabody Museum and on the literature. The most striking physical characteristic of the area is its predominant dolichocephaly. The Eskimos of Labrador and Greenland are long-headed and narrow-nosed. The Algonkian Naskapi and Montagnais from the southerly bands are unexpectedly round-headed (index around 81). The Algonkians appear to be narrow-nosed. The Montagnais and Naskapi are apparently late arrivals in the eastern and northern parts of their territory. The author has suggested that there are faintly Eskimo-like aspects in some of the Maine crania. Shapiro and Seltzer have raised the possibility of relationship among various Eskimo and Indian groups because of likenesses in measurements. If the skulls are considered, those of the Red Paint culture might be thought of as possibly related to the Eskimos.

29722. HULLEY, CLARENCE CHARLES, 1907-. Alaska 1741-1953. Portland, Ore., Binsford & Mort, 1953. 406 p. illus., maps on lining-papers.

Comprehensive and (despite numerous typographical errors) basic work, by the head of the Dept. of History and Political Science, University of Alaska.

Following a summary account of its climate, geography and aboriginal inhabitants, the author relates the history and exploration of Alaska in its Russian period to 1867 (p. 30-202), and its subsequent American period (p. 203-370), analyzing throughout the economic and political factors which influenced developments. He describes Russian expansion to the Pacific in the 18th century; the voyages of Bering and Chirikov discovering Alaska, and a new source of commercial furs; the development of Russian hunting and trading in the Aleutians; penetration of the British, French and Spanish in the Alaskan area; establishment (1799) of the monopolistic Russian-American Co. to offset foreigners' encroachment on the trade. Author outlines the Russians' early subjugation of the Aleuts; the company's efforts (particularly under Baranov) to make profits and to colonize, contending with hostile Tlingits, shipwrecks of outgoing fur cargoes, and of incoming trade goods and supplies; attempts to utilize American and other visiting traders, and to develop food sources in California by trade and founding of Fort Ross (1812). Business and government interests within the company, and predominance of the latter are discussed; also the contracting markets and depletion of fur-bearers, the rise of whaling and finally the relations of Russia, Great Britain and the U. S. and sale of Alaska to the U. S. in 1867.

Part 2 chronicles in detail successive phases of American administration from the early military to territorial (1912)

government, and the issue of statehood (since 1915). Exploration and prospecting, the gold rushes, the mining of gold, copper and coal, and the railroads also are treated, with emphasis on political controversies and business interests involved. Developments in education, treatment of natives, agriculture, road construction, air transportation are presented, with discussion of the territorial school system, Alaska University, Alaska Native Service, Matanuska Valley Settlement, Alaska Highway, and other topics of special interest. Final chapters cover Alaskan conditions during the Depression and the New Deal, Second World War, and post-war years to 1952. An extensive bibliography (approx. 500 refs.) is appended, as well as brief statistical and chronological tables.

29733. HUNTER, JAMES M. Thule Air Force base. (Progressive architecture, Dec. 1953. v. 34, no. 12, *Housing projects*, p. 107-111, illus., map, plans)

The U. S. Air Force Base was erected in 1951 at Thule, approx. 76°34' N. 68°48' W. in northwestern Greenland, and only 910 miles from the North Pole. Commissions for the installation were given Jan. 2, 1951 to Alfred Hopkins & Associates, architects of New York City, and to Metcalf & Eddy, civil engineers of Boston, Mass.

Previous construction work in the area had encountered difficulties because of the permafrost which began only four ft. below the surface. Heat from the buildings had thawed the top of the permafrost and the buildings had sunk into the resultant muck. To prevent similar difficulties in the new work, the permafrost was insulated from the heat of the man-made structures and also the sun, and the buildings erected on top of this insulation. The insulating material used was coarse, cracked-stone gravel from nearby creek-beds, which both insulated the ground and leveled it for future construction. General use of reinforced concrete for foundations was not practical because of the short building season. The only exceptions were the hangar foundations, which required piles and reinforced concrete to support the heavy loading of the larger aircraft. For most structures timber-crib foundations answered the dictates of the soil by providing an airspace between the undersides of the floor and the insulation over the permafrost. Airspaces were necessary because integral floor insulations were inadequate to allow the floors to be placed directly over the permafrost insulation. These airspaces likewise assisted in snow removal. Constant winds exist at Thule and provide a continuous movement of air around and under all structures. By placing the longitudinal axes of the buildings parallel to the prevailing winds, air blowing under the structures kept the snow from piling up around their sides.

Flat-roofed buildings were used because snow did not accumulate on top of them. Also there was less air to be heated within the buildings. Integral roof and ceiling members and simple construction could

be used. Gable ends of the few pitched roof buildings were faced directly into the wind. All entrances were placed on windswept sides of the buildings. All structures were built of relatively non-ignitable Clements wall and roof panels, prefabricated in the United States. These were made of two sheets of laminated aluminum and plywood with glass fibre insulation between. Exterior joints were sealed by sprayed-on vinyl plastic. The prefab. floor panels were glued-plywood assemblies of unusual strength. They were similar to the wall and roof panels but had no aluminum facings. Small clear-span buildings had wood frames. Larger installations used structural steel bents.

Copy seen: DLC.

29734. HUNTER, JOHN, and others. The relation between joint stiffness upon exposure to cold and the characteristics of synovial fluid. (Canadian journal of medical sciences, Oct. 1952. v. 30, no. 5, p. 367-77, 9 illus. (2 on 2 pl.), 2 tables) 14 refs. *Other authors:* E. H. Kerr, and M. G. Whillans.

Contains a report of investigations on man and some animals. Fall in temperature was observed to cause increased resistance of joints to movement, and a decrease of the maximum speed attained. This decrease of efficiency is explained by the characteristics of the synovial fluid; in bovine synovial fluid, the viscosity, and its increase with drop of temperature are a function of its content in mucin.

29736. HUNTINGTON, ELLSWORTH, 1876-1947. Geography and aviation. (Air affairs, 1947. v. 2, no. 1, p. 46-60)

Includes a discussion of the effects of trade centers on choice of arctic air routes (p. 50-52). Concludes that the geographic principles that govern the location of routes of transportation seem to make it highly

improbable that arctic, commercial air routes will ever be of much importance. States that the main routes will presumably always follow the courses dictated by the location of the larger cities. These principles do not, however, apply to military aviation.

29737. HURLEY, JOHN B. Birds observed in the Bristol Bay region, Alaska. Pts. I-V. (Murrelet, 1931, v. 12, no. 1, p. 7-11; (II) no. 2, p. 35-42, illus.; (III) no. 3, p. 71-75; (IV) 1932, v. 13, no. 1, p. 16-21; (V) no. 2, p. 38-40).

Contains a general account of the trip from Seattle to Bristol Bay region, Alaska, and a list of 46 birds (chiefly aquatic) with notes on habitat, abundance, plumage, nesting, eggs and life habits. A few photographs of nests and eggs are added.

Copy seen: MH.

29738. HURLEY, LLOYD A., and others. Preliminary investigation of the value of the dihydrogenated alkaloids of ergot in the treatment of experimental frostbite. (Surgery, gynecology and obstetrics, Mar. 1951. v. 92, p. 303-308, fig., tables) 11 refs. *Other authors:* J. E. Roberts, A. R. Buchanan, and G. Tillquist.

Contains an account of experiments on rats with experimental local frostbite; injection of a mixture of three dihydrogenated alkaloids of ergot showed a "statistically significant" improvement over non-treated controls; one group of animals received in addition heparin; the improvement in this group is attributed largely to the vasodilatory action of the alkaloids.

Copy seen: DLC.

29739. HURLEY LLOYD A., and A. R. BUCHANAN. Prophylactic and therapeutic value of hydergine in high altitude frostbite. (Surgery, gynecology and obstetrics, Oct. 1952. v. 95, no. 4, p. 423-30, illus. tables) 22 refs.

Contains an account of experiments with rats exposed to standard cold under conditions simulating a 25,000 ft. altitude. Tail losses in animals receiving the drug prophylactically were significantly less than in animals receiving it after freezing. The drug has a profound vasodilator effect upon peripheral vessels and optimum results can be expected if administered early, or before onset of thrombosis.

29740. HUSTICH, ILMARI, 1911- *Bartrådsarternas polara gräns på norra halvklotet.* Helsinki, 1952. 20 p. 6 maps, diagr. (Helsingfors. Metsätieteen tutkimuslaitos. Julkaisuja. Institutum Forestalis Fenniae. Communicationes, 1952. v. 40, no. 29) 62 refs. **Title tr.:** The polar limits of the coniferous species.

"The author gives a phytogeographical and taxonomical basis for a discussion of the relationship climate/tree-lines. The maps are approximate only. They illustrate the fact that the polar tree-lines are formed by different coniferous species in different parts of the Subarctic. The ecology of the different species is, however, almost the same in the climatically extreme conditions at the polar tree-line. The author also mentions the recent climatic fluctuation, which i. a. affects the polar forest-limit in a positive direction." Maps show the northern limits of *Picea*, *Abies*, *Pinus*, *Larix*, *Juniperus*, and *Thuja*. Summary in English; also rewritten in English as below.

29743. HUSTICH, ILMARI, 1911- Den klimatiska hasardfaktorn för jordbruk och skogsskötsel i Finland. (Ymer, 1948. Årg. 68, häfte 2, p. 121-27, 3 diagr., 4 tables) 6 refs. **Title tr.:** The

climatic hazard factor for agriculture and forestry in Finland.

The mean dispersion, expressed in percent of a variation coefficient as demonstrated for growth of rye in eight districts (1886-1925) is defined by the author as the climatic hazard factor, which is 13 percent in Nyland district and 26 percent in Uleåborg district. The variation coefficient for radial growth of coniferous forest in the Utsjoki Lappmark (69°30' N. lat.) was 30 percent. The climatic influence on production of organic substance is apparent from the tables presented. The practical application of the climatic hazard factor is not analyzed, but at least indicates its significance in agriculture and forestry in Finland.

29746. HYLAND, WILLIAM L., and G. M. REECE. Arctic conditions com-

plicate supply problems in Alaska. (Water works engineering, Apr. 1951. v. 104, p. 378, 414-15, 2 illus., incl. diagr., table)

The occurrence of water in permafrost areas is discussed and description given of the water supply at the Ladd Air Force Base, Fairbanks, Alaska, and of the treatment problems involved in removing excess iron and manganese to produce a potable water. This paper is a summary of the data regarding the Fairbanks supply presented in the item following.

Copy seen: DLC.

29747. HYLAND, WILLIAM L., and G. M. REECE. Water supplies for army bases in Alaska. (New England Water Works Association. Journal, Mar. 1951. v. 65, no. 1, p. 1-16, 4 illus., 3 tables)

Discusses the occurrence of water in permafrost areas where water is obtainable between or below permafrost zones, and in other areas where there is no permafrost, the climatic conditions are more moderate, and surface water supplies may be used advantageously. Descriptions are given of two water supplies: that at Fairbanks, Alaska, a ground water supply in a permafrost area; and that at Anchorage, Alaska, a surface supply from Ship Creek, in an area having no permafrost and a moderate climate. The water supply at the Ladd Air Force Base, Fairbanks, Alaska, comes from wells, 60 to 80 ft. deep, extending in most cases below the permafrost zone. The water contains iron and manganese in excess of the U. S. Public Health Service standards of a potable water. Corrective treatment consists in the addition of gaseous chlorine to the raw well water, settling, and filtration. At Anchorage the seasonal turbidity of the water supply from Ship Creek has required the installation of a coagulating (with alum and lime), settling and filtration system to produce a water supply unobjectionable for domestic use. Previously listed as *Arctic Bibliography*, No. 22762.

Contains an essay on life in the arctic regions from the viewpoint of the natural sciences and of ethics. The influence of environment and adaptation for survival as observed in vegetation, animals and man in the Arctic is discussed. Three zones, the arctic steppe, arctic tundra, and forest tundra are characterized with typical vegetation indicated for each. The author, professor of hygiene at

Kharkov University, describes the close association of man, reindeer and dog in the far North, and exemplifies it in the nomadic life of the Samoyeds of the Kanin Tundra, sketching their economy, mentality and ethics (p. 3-7). Arctic peoples, he states, are being decimated by famine, due mainly to reindeer disease. They are degenerated and impoverished by contact with the white man: alcohol, deprivation of good pastures and exploitation by traders are reducing them to beggary and extinction. Suggestions are made that a cultural mission be undertaken by the state to stay this trend.

29771. ICE AND REFRIGERATION. Army engineers test snow and ice for armed forces. (Ice and refrigeration, July 1953. v. 125, p. 35-36, illus.)

"Arctic snow, ice and frozen ground conditions are studied in laboratories of SIPRE at temperatures ranging from +33° to -68° F. to solve or minimize the problems of arctic warfare, transportation, communications, construction and living conditions. Most of the work is done in the +23° F. laboratory. Ice crystals from Alaska's Mendenhall Glacier and T-3 floating island are studied in the -68° F. laboratory. Ice can be planed, turned on a lathe, sanded, drilled, and polished. An 0.75-in. sq. piece of ice at +15° F. withstands 300 lb. pressure before crumbling. The permeability of different kinds of snow is also studied." —SIPRE. **Copy seen:** DLC.

Contains report of an investigation, the chilled subjects having one arm immersed in ice water for 15-25 min. and capillary and venous blood examined. The blood sugar level on the cooled arm was generally higher than in the one not cooled. The effects of tiredness and worry and the role of the central nervous system in the reaction were also studied.

Contains a comparative study of the cold pressor test in normal, psychoneurotic, schizophrenic and manic depressive subjects. Statistically significant differences were found between the nor-

mal and schizophrenic group (both males and females), and between the females of psychoneurotic and schizophrenic groups. A similar trend was observed when comparing the normal group and the psychoneurotic group with the manic depressive group. The relation of the findings to Gellhorn's theories, are discussed.

Moskva, Gos. izd-vo tekhn. i ekon. lit-ry po voprosam zagotovok, 1952. 336 p. illus. tables, 9 refs. **Title tr.:** Wild animal husbandry. Admitted as a textbook for the fur institute and the faculties of biology of government universities.

Handbook on raising animals for commercial purposes, in three parts: (1) General problems of husbandry of wild animals: history; products; selection; nutrition; breeding; (2) Raising animals in cages; (3) Free and partly free animal management. In part 2, several kinds of arctic foxes are treated: varieties, housing, food, selection, diseases, propagation, the young etc. (p. 143-212). In part 3 seals are dealt with: their biology, rookeries and harems, young, growth, rate of kill, fur, etc. An appendix contains tables on the chemical composition of foods used on animal farms.

. Men against the Arctic: the adventures of men who live and die in the polar regions. Bath, Venturebooks, 1949 vi, 209 p. plates, ports.

Contains 14 articles in popular style about travel and hunting in Canada, Spitsbergen, and Scandinavia, and an episode of World War II in Greenland.

Copy seen: DLC.

29778. ILLINGWORTH, FRANK, 1908-

. Polar air base. The Thule enterprise, and what its construction has involved. (Flight, Oct. 10, 1952. v. 62, no. 2281, p. 466-67, illus.)

Difficulties encountered in the construction of the Thule air base in north-west Greenland are stressed: permafrost, winter-long darkness, long intense cold, constant blizzards, atmospheric disturbances to radio reception; also difficulties of navigation because of nearness to North Magnetic Pole, and inaccessibility of the Thule coast for ten months of the year because of pack ice. Construction and transport achievement on Operation Blue Jay from Mar. 1950 are briefly stated.

Forestry. (In: Geografiska Sällskapet i Finland. Suomi, a general handbook on

the geography of Finland, *pub.* in Fennia, 1952. v. 72, p. 474-94, 7 text maps, 9 tables) 10 refs.

The northernmost tip of Finland is primarily a non-forested field region, but the area from the Arctic Circle to approx. 69° N. contains 51 percent to over 81 percent forested land. Quality of forest lands, tree species, ages of trees are discussed, as well as utilization of forests and possibilities for development. The importance and organization of forestry is stressed. Of principal interest for arctic regions are the maps and tables showing distribution of productive forest land by forest site types (comparison of northern and southern Finland), proportion of forest land to total land area, proportion of forests dominated by pine, by spruce, and by birch, the growing stock of forests and its distribution by forestry regions, and annual growth of forests.

29781. IMLAY, RALPH WILLARD, 1908- . Callovian (Jurassic) ammonites from the United States and Alaska. Pt. 2. Alaska Peninsula and Cook Inlet regions. Washington, D. C., U. S. Govt. Print. Off., 1953. p. 41-108, 31 plates, 7 text maps, 6 tables (1 fold.) U. S. Geological Survey. Professional paper 249-B) 89 refs.

Contains results of studies of collections made by Geological Survey field parties since 1903 and in summer 1948 on the Alaska Peninsula at or near Tuxedni Bay, Chinitna Bay, Inishkin Peninsula, Puale Bay, and Wide Bay. A biological analysis and stratigraphic summary of the Alaska Peninsula and Cook Inlet region are given, and the age of the fauna discussed. Comparisons are made with fauna from arctic Canada, northern Alaska, East Greenland and Barents Sea. Ecology and geographic distribution are discussed. A systematic de-

scription of 62 species, representing 19 genera, is given.

29783. INDREKO, R. Origin and area of settlement of the Finno-Ugric peoples. Heidelberg, 1948. 24 p. 15 illus. incl. text maps. (Science in exile; publications of the scientific quarterly *Scholar*, no. 1)

Contains a discussion on the oldest migrations of the Finno-Ugric peoples in the stone age and their settlement in Scandinavian and Baltic countries, based on archeological material. The oldest migration from Asia occurred in the early stone age and moved westward along the shores of the Arctic Ocean (fig. 8, 9). The arctic sea-hunters, coming from Asia, intermingled with the original Europeans who came from the South, and a mixed race thus came into being in the North, as we still recognize it today in the Lapps and the Samoyeds. Summary in German, p. 21-24.

29787. INSTITUT NARODOV SEVERA, Leningrad. Ukazatel' literatury izdannoi na ŋazykakh narodov Severa v 1931-1934 gg. Leningrad, 1935. 32 p. (Its: Nauchno-issledovatel'skaja assotsiatsiia. Komitet novogo alfavita narodov Severa). **Title tr.:** Index of literature published in the years 1931-1934 in the languages of the peoples of the North.

Contains a catalog of books and other publications (posters and newspapers) for elementary schools and general education of minorities in their native tongues, printed in the Latinized "northern alphabet," elaborated by the Institut Narodov Severa. Some five standard text books were selected and translated into several languages: an elementary ABC book, two parts of an advanced reading book, and two parts of arithmetic. For the more numerous peoples, some popular booklets of "political enlightenment," tales and other reading material for children, also a few medical-hygiene and trade books (on hunting, fishing, etc.) were published. The catalog gives full bibliographical data on these publica-

tions in 15 northern languages: Tungus (29 books), Lamut (16), Gold (23), Udē (6), Samoyed (14), Ostyak (4), Ostyak-Samoyed (4), Vogul (8), Lappish (8), Chukchi (11), Koryak (7), Gilyak (8), Eskimo (2), Kamchadal (2), and Yeniseian (1). Russian versions of the textbooks and manuals on methods, etc., published to help teachers working in the schools are also listed (p. 23-26). A plan for further publications is given (p. 26-30) which probably was never carried out, because by 1936 the "northern alphabet" had already been abolished and Russian characters introduced. The program for liquidation of illiteracy among small peoples of the North, is outlined in introduction (p. 3-6) and summarized in English (p. 31).

29789. INTERNATIONAL ASSOCIATION OF SCIENTIFIC HYDROLOGY. Bibliography of hydrology, United States of America for the years 1935-1940. Washington, D. C., American Geophysical Union, 1937-1941. 5 v. pagged separately.

Each volume contains references assembled by subject with an author (but no geographic) index. Subjects include hydrometeorology, watercourses, lakes,

glaciers, underground water, hydrologic cycle, application of sciences to hydrology, and miscellaneous (soils, etc.). Sections on glaciers, snow, etc., include a few references to Alaska and to other arctic regions. Annotations range from 15 to 200 words. This work was carried on by the American Geophysical Union, q.v.

29798. IRON ORE COMPANY OF CANADA. STAFF. The geology and ore deposits of the central portion of the Labrador Peninsula. (Economic geology, Nov. 1953. v. 48, no. 7, p. 625.)

Contains abstract of paper presented

(by A. E. Moss) to the joint meeting of the Society of Economic Geologists and Geological Society of America, Toronto, Canada, Nov. 9-11, 1953. Describes some 8,000 square miles of the "Labrador Trough," an "intricately folded and faulted geosynclinal segment consisting of a great variety of sedimentary and volcanic rocks . . . cut by intrusives ranging in composition from serpentinites to granites. These rocks are considered to be late precambrian and in places rest unconformably on an early precambrian, gneiss complex. . . . Economically, the most important rocks are the iron bearing sedimentary members of 'iron formation' which throughout the area are believed to occur at the same stratigraphic horizon." The high-grade iron ores are secondary and their origin is explained.

29800. IRVING, LAURENCE, 1895- . The naming of birds by Nunamiut Eskimo. (Arctic, Mar. 1953. v. 6, no. 1, p. 35-43, map) 7 refs.

Contains a list of some 115 names of birds in English and Nunamiut, the meaning of the Nunamiut name and status of the species (nesting, migrant, accidental, etc.). This is preceded by a description of the Anaktuvuk Pass region (68° N. 152° W.) of the Brooks Range, Northern Alaska, where the birds were observed and the home of the Nunamiut, a small inland group with strong oral traditions. Some anthropological data on these people, note of earlier studies, etc., are included. This study was made with Simeon Paneak, a native Nunamiut having an exceptional command of English, with whom the author had been associated in field work for five years.

29802. IRVING, WILLIAM. Evidence of early tundra cultures in northern Alaska. (Alaska. University. Anthropological papers, 1953. v. 1, no. 2, p. 55-85, 4 illus.) 33 refs.

Contains report on archeological investigations made by the author during the summers of 1950 and 1951 at Anaktuvuk Pass in the Brooks Range (68°15' N. 151°30' W.) where a relatively isolated group of inland Eskimos, the Nunamiut, live. Geographical description with notes of plant and animal life of the area is given; then follows a detailed report on excavations of two sites, Imaigenik and Tuluak, and on the finds of flint tools and implements. The artifacts of Imaigenik establish a close relationship with the Denbigh flint complex. Other finds from the Anaktuvuk and Killik valleys are considered in appendices (p. 74-79). Summarizing his investigation the author says: "Elements, and perhaps most often

groups of elements, of an old microlithic industry are found to occur in various combinations throughout the American Arctic (and beyond) with a distribution that in the New World seems to approximate that of the modern Eskimo. The culture matrix in which, according to present data, these microlithic elements usually appear, and which may well have been their principal vehicle was adopted to both littoral and the alpine tundra of the Arctic. This must therefore have been already a highly specialized culture with many basic similarities to that of the Eskimo . . . We have now archaeological evidence of men existing in the treeless part of the American Arctic and living inland at an early date" (p. 71-72). There is, however, no material from the inland region to bridge the gap between Tuluak and the modern Eskimo, and there is no geological basis for estimating the age of either explored sites at the present time. The virtual absence of macrolithic tools in both sites is noted, in fact of anything to suggest a relationship with early American complexes known from farther south.

Contains report of a project consisting in establishing a squad tent in the rear of a battalion, with a sergeant of the Medical Service in attendance, and a physician visiting every 2-3 days; the aim was to save time and transportation,

preserve the strength of the battalion and discourage self-infliction of frostbite. Data on routine treatment, degrees of injury, causative factors, etc., are included.

Moskva-Leningrad, Voenno-morskoe izd-vo, 1945. 96 p., 8 fig. (text maps)

A popular survey of the activities of the Russian navy in World War II. Chap. 3, *Vofna na Severnom teatre*: The war in the northern theater (p. 28-49), deals with German attempts to establish naval bases in northern Finland (Petsamo) and Norway (Altenfjorden) for harassment of shipping lanes to the U.S.S.R., and for launching attacks in the Atlantic; their failure and the gradual destruction of the German navy by combined action of the Soviet and allied naval (and air) forces. The activities of the Soviet fleet operating in the White Sea are briefly mentioned, p. 80.

29808. ISLAVIN, VOLDEMAR. Das Hauswesen, die Renntierzucht und die Gewerbsthätigkeit der Samojeden der Mesen'schen Tundra. (Zeitschrift für allgemeine Erdkunde, 1861. Neue Folge, Bd. 10, p. 76-114) **Title tr.:** The household, the reindeer breeding and the trade of Samoyeds in the Mezen' Tundra.

Contains selected chapters translated from a Russian manuscript, describing the life of Samoyeds around Mezen' as the author saw it during a six-month sojourn in 1844. He was sent there by Russian authorities to study the economic and social conditions, especially the problem of Izhmians (Zyryans from the Izhma River) who had come to the Timan and Kanin tundra region as manual workers around 1800. In some forty years they had attained economic control of the area, and (with the Russians) were exploiting the poverty-stricken Samoyeds. Alcohol introduced by the former two, was a factor in the deterioration of the latter. Thus by 1844 only half the Samoyed families possessed small reindeer herds (1,800 such owned 30,000 animals, while 330 Izhmian and Russian families owned 136,148 head). Many details are given on Samoyed material culture: their tents, clothing, food, reindeer breeding, transportation, nomadizing, their technique of hunting, and wild fowl catching. The Samoyed mentality is noted, also the ability in herding and hunting which rendered them indispensable to the Izhmians and Russians.

29811. ITKONEN, ERKKI ESAIAS, 1913- . Lappalaisten esihistoriaa valaisevia sanoja. (Virittäjä, 1946. no. 4, p. 401-421) **Title tr.:** Words which throw light upon the prehistory of the Lapps.

Contains a study on the origin of the Lapp words *ruošša* (a Swede or Russian), *darro* (from Finnish *taro*, meaning 'cultivated land'), also on the Finnish name for Lapps *lappalainen* ('piece of material'), and Finnish *orja* ('slave'), derived from Lapp *oarje* ('south'). Linguistic explanations are given for these words which throw some light on the past of the Lapps: a part of these people probably lived about 800-1000 A. D. around Lake Ladoga and met Vikings there; also about 800 A. D. the Lapps met neighbors who intensively cultivated their land; in prehistoric times Finns lived in a region south and southeast from the Gulf of Finland and Lapps were their northern neighbors. Summary in French p. 512-513.

Contains account of the former complicated commercial and administrative situation in Lapland, based on documents of 13th to 18th centuries. The same Lapps were often obliged to pay taxes to Swedish, Norwegian, and Russian authorities, because they nomadized over a vast territory under sovereignty of several

"crowns". The clergy and landowners also collected their tithes and rents. Four periods of Lapp taxation are defined: (1) that of the *Birkkerl*, i. e. the Finnish landowner in Lapland who considered Lapps to be his subjects; (2) from 1550 to 1602 when taxes were collected by these landowners for the crown; (3) from 1603 to 1694 when taxes were collected by king's officials (*Lappenroth*), directly; and (4) the period since 1694 when most of the Lapp communities began to pay their taxes in money instead of in kind. Trade and barter between Lapps and others is described, exchange rates and prices for products of both parties are indicated, and conflicts resulting from commercial transactions are mentioned.

29819. ITKONEN, TOIVO IMMANUEL, 1891- . Lappalaisten tulenteosta ja yöpymisestä. Virittäjä, 1945, v. 49, no. 3, p. 438-45, 3 illus.) **Title tr.:** Making a fire and night camping among the Lapps.

Contains description of Lapp camping in summer and winter: the most comfortable way for traveler, hunter or herder to spend the night. The fire is started with a flint, the dry root of a dead fir tree burns all night long; in winter a larger fire is made from one to three dry fir logs; a Lappish woman understands how to make a fire using green birch. In winter a travelling Lapp can spend the night without camp fire, by digging himself into the snow; in a snowstorm the overturned reindeer sledge is used for

shelter, and a dog can serve as a "warming flask." In summer a small cotton tent for one or two persons is used as protection from mosquitoes. Summary in German, p. 510. **Copy seen:** DLC.

29820. ITKONEN, TOIVO IMMANUEL, 1891- . Lappinkoira. (Virittäjä, 1946. v. 50, p. 475-88) **Title tr.:** The Lapp dog.

Contains description of the race of Lapp dogs, used for hunting and for reindeer herding. Its physical qualities, life habit, food, training, etc., are described. The names of different kinds of these dogs, are given in detail. Summary in French, p. 516. **Copy seen:** DLC.

29821. ITKONEN, TOIVO IMMANUEL, 1891- . Muutamia suomalais-lappalaisia kalastustermejä. (Virittäjä, 1936. no. 3, p. 290-95) **Title tr.:** Some Finnish-Lappish terms for fishery.

Contains a linguistic investigation of nine technical terms for fishing implements or actions. These words as they occur in the two languages are related, and the affinities are based either on an ancient common origin, or on later reciprocal borrowings. Summary in German, p. 382. **Copy seen:** DLC.

29822. ITKONEN, TOIVO IMMANUEL, 1891- . Suomen -kuolan- ja ruijanlappalaisten vanhat henkilönnimet. (Virittäjä, 1942. v. 46, no. 1, p. 60-89) **Title tr.:** The old personal names of Lapps in Finland, Finnmark and the Kola Peninsula.

Contains analysis of 193 old Lappish personal names, some of them first recorded in the revenue lists of 1553-1616. Most of the names are of Lappish origin (120), others were taken over from the Finnish Karelians (63), and the remaining ten could be of Lappish or Finnish origin. Formerly the Lapps used the family name only, later (between 1680 and 1730) under the influence of the clergy, they received first or Christian names also. Summary in German, p. 112. **Copy seen:** DLC.

29823. ITKONEN, TOIVO IMMANUEL, 1891- . Suomen lappalaisten ajanlasku (äijge-lohkku). (Virittäjä, 1945. v. 49, no. 2, p. 223-44) **Title tr.:** The calendar of the Finnish Lapps.

Contains Lapp names for months (nine terms are connected with reindeer), special names for certain weeks (e. g. week of young leaves), for seasons of the

year, feast days and times otherwise memorable. Scandinavian and Orthodox Russian influence is apparent in these names. Summary in French, p. 304-305. **Copy seen:** DLC.

29824. IUDIN, IŮ. P. Ocherk rastitel'nosti bassejnov rek Shehugora i Podchera, Severnyĭ Ural. (Botanicheskiĭ zhurnal, 1950. t. 35, no. 5, p. 522-26)

Title tr.: Sketch of the vegetation of the basins of the Shehugor and Podchera Rivers, Northern Ural.

Contains the results of a geobotanical study, in the summer of 1946, of the basins of the Shehugor and Podchera Rivers (63°25'-64°30' N.) between Pechora River and Ural Mts. The landscapes, geobotanical subdivision, the peculiar features and typical plant formations of each zone, vertical distribution and succession of the vegetation are presented briefly; with remarks on the most interesting plants of relict character (*Alyssum sibiricum*, *Boschniakia glabra*, *Thymus serpyllum*, *Polypodium vulgare*, etc.) **Copy seen:** MH-A.

Contains a list of 148 species of birds observed in the basin of the Yenisey River (60°-64° N.) with data on their habitat, ecology and geographic distribution. **Copy seen:** MH-Z.

29826. IUDKIN, I. I. Ikhtiologiĭa. Utverzhdeno GUUZom NKRP SSSR v kachestve uchebnika dlia tekhnikumov rybnol'noĭ promyshlennosti, Moskva-Leningrad, Pischepromizdat, 1941. 278 p. illus. plates, tables, map **Title tr.:** Ichthyology. Approved by the GUUZ. NKRP. SSSR as a textbook for technical schools of fishing industry.

An extensive handbook on fishes in general, and especially Russian forms of economic value; with sections on the origin and place of fishes in the animal kingdom, cellular and chemical composition of their organism, anatomy and physiology, ecology and biology, parasites and enemies of fishes, chief industrial fishes of the U.S.S.R. This last section (p. 145-272) is arranged in taxonomic order and includes arctic forms and industries, such as: the Siberian sturgeon

(p. 169); White Sea, and Murman herring (p. 180-86); soles and codfish (p. 263-73). An area list gives the names of fish common to geographical regions including the arctic area (p. 274). Bibliographical footnotes. **Copy seen:** DLC.

29827. IURGENSON, P. B. Das Hermelin aus dem Turuchansk-Gebiet, *Mustela erminea ognevi* subsp. nova. (Zoologischer Anzeiger, 1932. Bd. 98, no. 1-2, p. 11-15) **Title tr.:** An ermine from the Turukhansk region, *Mustela erminea ognevi* subsp. nov.

A comparative craniological study of *Mustela erminea ognevi* n. subsp. (type from the Taz River delta, 67°-68° N. 78° E.), and three other subspecies of *M. erminea*. A table of dimensions is given on p. 13. **Copy seen:** MH-Z.

29828. IURGENSON, P. B. Nauchnaya laboratoriya v taige, Pechora-Ilychskii gosudarstvennyi zapovednik. (Priroda, 1953. no. 8, p. 62-66, illus.) **Title tr.:** A scientific laboratory in the taiga, Pechora-Ilych State Sanctuary.

Contains a general description of this sanctuary in the upper Pechora River basin, with data on its geography, landscape, flora, fauna and scientific activity. One of its most important and successful experiments was the introduction of the river beaver from the Voronezh preserve in 1938: the beaver population has increased 16 times. A study of the domestication, physiology and ecology of elk is being carried out by E. P. Knorre since 1937. The Pechora-Ilych preserve is now a very important scientific research center for the whole northern region of the European section of the U.S.S.R. **Copy seen:** DLC; MH.

29829. IUSHKOV, P. D. Venericheskie bolezni sredi permiaikov. (Permskii kraevedcheskii sbornik, 1928. vyp. 4, p. 135-41, tables) 10 refs. **Title tr.:** Venerical diseases among the Permians.

Contains a report on health and hygiene among the inhabitants (80 percent Zyryan) of a village in Nerdvinsk district, formerly Piteyevskaya volost' (county), where the author, a doctor, made a survey in summer 1927, for the dermatological clinic of Perm' University. Of 4,076 persons examined, 39 were found infected by syphilis and 188 by gonorrhea. The percentage of sick was higher among the Russian than the Zyryan population. The role of the native medicine-man and his "medicaments" are described, e.g.

corrosive sublimate used for syphilis. Conditions generally among the Zyryans are noted: their economic situation, overcrowded dwellings and lack of cleanliness, their physical appearance and most common diseases, native food and clothing, superstitions, beliefs in spirits, etc. Most of the marriages are made between 18 and 25 years of age. Among the examined girls of 16-23 years, 63 percent were not virgins. **Copy seen:** DLC.

29837. IVANOV, SERGEY VASIL'EVICH. Ornament narodov Sibiri kak istoricheskii istochnik. (Akademiia nauk SSSR. Institut étnografii. Kratkie soobshcheniia, 1952. t. 15, p. 8-18, 12 illus.) **Title tr.:** Ornament of the Siberian peoples as historical source material.

Contains an analysis of ornament, its ethnic relationship and historical background. The author finds 12 types of ornaments among the Siberian peoples: (I) North-Asiatic, (II) Sayano-Altaic, (III) East-Siberian, (IV) Siberian, (V) Near-Obian, (VI) Lower Irtyshian, (VII) Lower Irtyshian-North Altaian, (VIII) Lower Amurian-North Sakhalinian, (IX) South Sakhalinian, (X) Upper Yeniseian and Lena-Baikalian, (XI) Central and southeastern Asiatic, and (XII) Tobol-Irtyshian. These types are briefly characterized and illustrated by drawings, and an attempt is made to find ethnic ties between them and certain peoples. Types I, II, and IV, however, cannot be directly attributed to any one recent people, types I and IV being known in North America also. Among

other conclusions offered, the southern Ostyaks and Voguls are said to have developed ornaments of type VI; the southern and eastern part of the same peoples, type VII; their northern brothers have also elements of types I and II. Among the Tungus, the predominant ornaments are of type III; among the Yakuts, those of type X, etc. Some ornaments of type I reach back to the paleolithic period, others belong to the Maglemosian culture.

29838. IVANOV, V. K. O tverdom nalete. (Zhurnal geofiziki, 1931. t. 1, p. 259-61, illus., table) *Title tr.:* Air hoar.

"Air hoar was observed in Omsk (55° N. 73°24' E. western Siberia) on Jan. 9-13, 1930. It is believed that air hoar is a formation of ice crystals sublimated from warm, humid air on stone walls and other good conductors of heat after freezing weather. The structure of the crystals resembles that of hoarfrost. Intense formations of air hoar were observed on stone walls of unheated buildings following long periods of air temperatures below -20° C, accompanied by a change in wind direction and rising air temperatures. The air hoar did not sublimate on outside corners and ornaments of the buildings."—SIPRE.

29842. JACOBI, ARNOLD, 1870- Carl Heinrich Mercks ethnographische Beobachtungen über die Völker des Beringsmeers 1789-91. (Baessler-Archiv, 1937. Bd. 20, Heft 3-4, p. 113-137, port.) *Title tr.:* Carl Heinrich Merck's ethnographical observations on the peoples of the Bering Sea in 1789-91.

Contains an introduction by Jacobi (p. 113-16) followed by excerpts from Merck's diary, his ethnological notes on the Aleuts of Unalaska Island, the Kingmiut of Seward Peninsula, the Koniags of Kodiak Island, and finally short notes on the Chugachmiut at Prince William Sound. The description of the natives from the first three places is quite extensive and rich in ethnographical data: their physical appearance, body ornaments and tattooing, clothing of men and women; housing and household utensils; occupation (hunting and fishing, tools and weapons, boats, hunting customs); food and its preparation, women's work; social organization, relations of sexes, marriage, childbirth and education; popular medicine (artificial bleeding, diet and isolation of the sick, use of wormwood, *Artemisia vulgaris*); suicide of old men and sacrifice of boys (slaves)

by strangling at the funeral of a rich man, mortuary customs; religion and shamanism; entertainments, masks and dances. A list of Aleut words with German equivalents is appended, in addition to the native names and words used in Merck's notes. The author, a German physician from Darmstadt in the Russian service, took part in the Billings' expedition. His diary, which had been lost for about 150 years and recently discovered in a second-hand bookseller's shop in Leipzig (see also *Arctic Bibliography*, No. 17105), begins with Aug. 16, 1789, in Okhotsk, and consists of 162 pages in folio. Its botanical and zoological notes were utilized by P. S. Pallas and are now to a great extent outdated, the ethnographical observations, however, are of great importance because they were made at a relatively early date, before acculturation distorted the native culture. **Copy seen:** DLC.

29843. JACOBI, ARNOLD, 1870- . Eine völkerrkundliche Sammlung von den europäischen Samojeden. (Dresden. Staatliches Museum für Tierkunde und Völkerrunde. Abhandlungen und Berichte, 1917, pub. 1918. Bd. 15, no. 2, p. 1-17, 7 text illus. and 79 illus. on 4 plates) 14 refs. **Title tr.:** An ethnographical collection from the European Samoyeds.

Contains description with drawings and photographs of a Samoyedic collection in the Museum of Dresden, brought home by the author from his trip (together with August Sprogis) among the Samoyeds of the Kanin Peninsula in Oct-Nov. 1913. His collection was supplemented with objects from the Samoyeds of the Kanin and Bol'shezemel'skaya tundras, donated by Georg Riedel in Mezen' and Olsen in Arkhangel'sk. After an introduction on the general cultural background of the Samoyedic people, the objects are described in six chapters: clothing and ornaments, dwellings, implements and utensils, means of transportation, hunting and fishing equipment, toys and objects of cult. Details are given on kind of material (with measurements), fabrication and use of the artifacts. An account of Jacobi's trip was written by H. Wichmann, q. v.

Contains description of nephrite utensils acquired by the author in 1881-1883 from the West Alaskan Eskimos of Cape Prince of Wales and Kotzebue Sound region, in all about 80 objects: axes, chisels, knives, hammers, necklets, labrets, amulets, etc. Nephrite objects are noted as found at the mouth of the Yukon, in northern Queen Charlotte Islands, along the coast from Pt. Barrow to Vancouver (labrets), and (axes) among the Chukchis, with suggestion that they originated in the Kotzebue Sound region. Nephrite artifacts found in 1884-85 around Irkutsk and among the Golds on the Amur River, author suggests originated from the Mongolian and Manchurian trade; Chinese use of nephrite amulets is noted. The source of the nephrite raw material author was unable to find out.

JACOBY, A. See [Jakobif, Arkadii Ivanovich, 1827-

JÄRNEFELT, HEIKKI, see Geografiska Sällskapet i Finland. Suomi, handbook geog. Finland. 1952. No. 29227.

29845. JÄRNEFORS, BJÖRN. A sedimentpetrographic study of glacial till from the Pajala district, N. Sweden. (Geologiska Föreningen, Stockholm. Forhandlingar, Mar.-Apr. 1952. Bd. 74, no. 2 (no. 469), p. 185-211, illus., 2 text maps, 5 diagrs., 5 graphs, 2 tables) 54 refs.

Contains a study of the fine sediments in till from the Pajala district near the Finnish border, 35 m. north of the Arctic Circle. Field work was carried out during 1950-51. The bedrock and glacial geology are briefly described, followed by a detailed discussion of the till, including till fabric, petrographic, mineralogical, spectrographic and chemical analyses. Results show that the lower of the two till beds was deposited by an older ice flow from the northwest, the upper by a younger flow from the southwest.

29846. JAILLITE, W. MARKS. Flight strips along the Alaska Highway. (Military engineering, Nov. 1944. v. 36, p. 376-77, illus.)

"Construction of the strips was started in July 1943 and suspended by freeze-up in Dec. before compaction was completed. The strips provided an excellent landing surface while frozen, though unfinished. Much of the binder material was lost during the spring break-up and the resulting unstable surface rendered the strips unsafe for aircraft landings. Stabilizing the surface was started in June 1944 and required seven weeks. Silt with varying amounts of clay was spread over the loose surface and mixed in thoroughly; an optimum amount of water was added and the surface rolled until the desired density was achieved. A detailed account of the work involved and the equipment needed for stabilizing the surface of the eight flight strips is presented."—SIPRE.

29847. JAKHELLN, ANTON, 1904- . Maps of snow accumulation, a meteorological aid to hydrology. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. General Assembly, Brussels, 1951, pub. 1952? t. 1, p. 270-76, table, graph, maps)

"Snow drifting in treeless, mountainous areas of Norway makes the direct measurement of the amount of accumulated snow difficult. An indirect method to determine the amount of snow by means of meteorological observations is presented. It is based on the date of the beginning of snow accumulation, the amount of subsequent precipitation, and the relationship between the normal temperature conditions and the beginning of the snow accumulation. An isochronic map showing the dates when the normal temperature falls below 0° C., at the 400 m. level and a map showing the percentage of accumulated snow on Mar. 31, 1951 in relation to the normal at the 400 m. level are presented. No allowance is made for solar radiation, evaporation, condensation of air moisture, rain, and possible melting and run-off during the accumulation period. The maps give a general picture of snow conditions but should be interpreted with discretion."—SIPRE.

29861. JENNESS, DIAMOND, 1886- . Did the Yahgan Indians of Tierra del Fuego speak an Eskimo tongue? (International journal of American linguistics, Apr. 1953. v. 19, no. 2, p. 128-131) 3 refs.

Contains a comparison of Yahgan phonology, grammar and vocabulary with those of Eskimo, concluding that there are enough resemblances to support the theory of some relationship between Yahgans and Eskimos.

Copy seen: DLC.

29862. JENNESS, DIAMOND, 1886- . Prehistoric culture waves from Asia to America. (In: Congrès International des Sciences Anthropologiques et Ethnologiques. 2d, Copenhagen, 1938. Compte rendu, 1939. p. 296-97)

Contains review of the migration of Eskimos and Indians from the Bering Sea region into Alaska. Archeological remains show that there have been no movements between Asia and America, except that of Eskimos, for 2,000 years. Probably the latest movement was that of the Athapaskan peoples around the first millenium B. C. It is suggested that the latter originated in the Amur region; and the proto-Eskimo home was on the Siberian arctic coast.

Copy seen: DLC.

29863. JENNESS, DIAMOND, 1886- . Prehistoric culture waves from Asia to America. (Washington Academy of Sciences. Journal, Jan. 1940. v. 30, no. 1, p. 1-15)

Contains presidential address to the American Anthropological Association, Dec. 1939, communicated to this Academy by H. B. Collins. The whole rather complicated problem, as regards the Eskimo, is investigated largely on the basis of excavations made by Dr. Collins. Some of the conclusions are: (1) there has been no extensive migration across Bering Strait, unless it be of Eskimo, since the early centuries of the Christian Era; (2) immigration by way of Kamchatka and the Aleutian archipelago likewise can be ruled out; (3) Bering Strait, therefore, was the only route of ingress into this hemisphere, and the forefathers of every known division of Indians must already have crossed this Strait by the beginning of the Christian Era; (4) even the resemblances between the Paleo-Asiatics and the Indians of the northwest coast of America hardly demand a migration in post-Christian times; this conclusion harmonizes well with the results of linguistic studies.

29864. JENNESS, JOHN L. The physical geography of the waters of the

western Canadian Arctic. (Geographical bulletin, 1953. No. 4, p. 32-64, illus., maps) 59 refs.

Contains the results of a joint expedition of the Canadian Geographical Branch, represented by J. L. Jenness, and the Arctic Institute of North America, represented by A. L. Washburn. The purpose of the expedition, carried out in the summer and winter of 1948 and summer of 1949, was to make "a new and geographical appraisal of an area in which much recent work had been done." The nature of the continental platform is described, giving soundings for the various channels and straits, and reasons for the sizes and shapes of the water bodies. Tidal ranges, cycles, and diurnal inequality in heights of tides are noted; currents through the various channels are described. Includes a discussion of sea ice conditions throughout the year and the accessibility of western arctic waters. Map shows major categories of ice cover in the area. Summary in French.

29865. JENNEY, CHARLES PHILLIP. 1909-. The Coppermine River area, Northwest Territories, Canada. (Economic geology, Nov. 1953. v. 48, no. 7, p. 621)

Contains abstract of a paper presented at the joint meeting of the Society of Economic Geologists and the Geological Society of America, Toronto, Canada, Nov. 9-11, 1953. Early exploration and description of the region south of the Arctic Ocean between 114°-118° W. was followed by intensive prospecting in 1929-31 and after 1943. The Precambrian and later geology and the major faults of the region are briefly described. Copper is found in basalts of the lower Coppermine Series and is associated with the faults. Although no minable deposits have been found, the total volume of copper indicates the importance of the region.

29866. JENNOV, J. G. Moskuskoksen som tandyr i Vestgrønland. (Grønlandsposten, 1950. Aarg. 9, nr. 8, p. 97-99, illus.) *Title tr.:* Domestication of musk oxen in West Greenland.

Includes experiences from Norway, Svalbard and Alaska where the animals are said to increase in number. Author

estimates that West Greenland grazing grounds would support about 90,000 musk oxen. They would give an annual meat production of about 1,300 tons without reducing the size of the herds. Utilization of the milk and wool is discussed briefly. Calves of musk oxen seem to adapt easily to the domesticated animal routine.

Copy seen: DLC.

29867. JENNOV, J. G. Nogle betraktninger over forskellige forhold i Nord-østgrønland. (Naturen, 1953. Argang 77, nr. 14, p. 427-45, 4 illus.) *Title tr.:* Some considerations on various conditions in northeast Greenland.

Contains discussion of possibilities of reindeer and musk ox farming in the region between Scoresby Sund (70° N.) and Pearyland (83° N.). The ice-free area is estimated at about 120,000 sq. km., of which but 6,000 sq. km., or five percent supports vegetation. Exploitation and (especially) limited food supply have reduced the reindeer population of the region, and the development or renewal of grazing grounds is a lengthy process. Musk oxen, more rugged than reindeer have a better chance of survival in northeast Greenland. They are estimated at about 20,000 head there, with a normal increase of fifteen and decrease of eight percent, a net annual increase of seven percent, or a doubling of the stock in 11 years if let alone. A census of the herd is suggested, and transfer of some musk oxen to West Greenland to maintain the herd.

29875. JENSEN, LEIF LYNEBORG. Grønlandsk jagtfalk, *Falco rusticola candicans* Gm., skudt i Danmark. (Dansk ornithologisk forening. Tidsskrift, 1953, Årg. 47, hefte 2, p. 96-98, illus.) **Title tr.:** The Greenland falcon, *Falco rusticola candicans* Gm., obtained in Denmark.

Contains data on the geographic distribution of this bird: Greenland, Alaska, northern Asia; and the first record of its find in Denmark, in the western part of Jutland near the village of Bækmarksbro, Feb. 1952. Summary in English.

Copy seen: MH-Z.

29876. JENSEN, LOUIS. Det Grønlandske landbrugs udviklingsmuligheder. (Grønlandske selskab. Årsskrift 1951, p. 67-77, illus.) **Title tr.:** Potential development of Greenland's agriculture.

Contains a discussion of problems stressing the psychological factor: Greenlanders seem reluctant to struggle for winter fodder. It is essential, as sheep flocks now (1948) number some 22,300 animals, or five per inhabitant in Julianehaab Distrikt, a higher ratio than in Iceland or the Faroes. New land must be broken and fertilized. Crop yield will increase also by the cultivation program planned.

29880. JOBERT, Mme. N. Sondages sismiques au Groenland. Deuxième partie. Dispersion des ondes de surface dans la couche superficielle du glacier du Groenland. (Annales de géophysique, Oct.-Dec. 1953. t. 9, fasc. 4, p. 345-66, diagrs., graphs, tables) 16 refs. Reprint issued as: Expéditions polaires françaises. Rapport scientifiques, N. III. 2. **Title tr.:** Seismic soundings in Greenland. Pt. 2. Dispersion of surface waves in the superficial layer of the Greenland glacier.

Seismic records in Greenland show two distinct phases of the long waves; their dispersion is studied. Records used were those made during 1950-52 at the central station (70°55' N. 40°30' W.) of the P.-É. Viator Expedition to Greenland. Experimental dispersion waves are discussed. The second phase of waves is believed to represent the Rayleigh waves. The first phase—coming before Rayleigh waves—is interpreted as "S superficial" waves affected by a superficial layer having a thickness of approximately 1.5 waves lengths.

29882. JOCHELSON, VLADIMIR IL'ICH, 1855-1937. Kumi'ss festivals of the Yakut and the decoration of kumi'ss vessels. (In: Boas anniversary volume, anthropological papers written in honor of Franz Boas, N. Y., 1906. p. 257-71, 6 plates, fig.)

Contains a short outline of the cultural background of the Yakut people and

detailed description of their kumiss festival, its religious and social significance. Two such festivals are arranged annually: one in the spring in day time, dedicated to the Supreme Being and the head of the benevolent deities of "creators;" prayers for abundance are accompanied by libation of kumiss and unbloody sacrifices (formerly horses were consecrated and driven to the east). Another festival in the autumn celebrated at night, is dedicated to the evil spirits, and directed by nine shamans with libation of kumiss and blood sacrifices of cattle and horses. Detailed description is given of the churning of the kumiss (from fermented mares' milk); the richly ornamented kumiss vessels (leather churns, wooden goblets and buckets) are described and illustrated; their ornaments investigated and the entire ceremonial presented in detail. Each such festival commenced with sacrifices, and was accompanied with songs, dances, games, horse and foot races, and other contests. The Yakuts nowadays are changing over from horse-breeding to cattle-breeding, and the mares for milking can be found only in those districts far removed from the influence of Russian culture. Large droves of mares for milking belong to a few very rich families. Therefore, the ancient ornamented kumiss vessels and goblets are disappearing, as well as the customs, festivals and ceremonials associated with the production and use of kumiss. The decorative patterns on the kumiss vessels consist almost exclusively of geometric figures (except the carving of horses' hoofs), and have no connection with religious ideas. The author collected his material in 1888-97 (latterly as a member of the Sibirskov expedition), and later during his participation in the Jesup North Pacific Expedition; he gathered an extensive Yakut collection for the American Museum of Natural History, including the large ornamented kumiss goblets and birch-bark summer tents no longer in use. **Copy seen:** DLC.

29883. JOCHELSON, VLADIMIR IL'ICH, 1855-1937. Materialy po izucheniiu ūkagirskago ūzyka i fol'klora, sobrannye v Kolym'skom okruge. Chast' 1-iā, Obraztsy narodnoi slovesnosti ūkagirov (teksty s perevodom). S.-Peterburg, Akademiia nauk, 1900. viii, xv, 240 p. (Īakutskaiā ēkspeditsiia I. M. Sibirskova. Trudy, otdel 3, t. 9, chast' 3) **Title tr.:** Materials for in-

vestigation of the Yukaghir language and folklore, collected in the Kolyma region. Part 1, specimens of the Yukaghir folk literature (texts with translations).

Contains Yukaghir folklore written down in the Kolyma region in 1895-97 during author's participation on the Sibirskov Yakut expedition. Most of the texts are in the upper Kolyma dialect; some from the Russified sibs of Omolon, and a few in the tundra dialect spoken between the Kolyma and Alazeya, showing Tungusian influence. They comprise (no. 1-28) tales in the upper Yukaghirian dialect; (no. 28-92) traditions, legends, narratives, shamanistic texts and songs in upper Yukaghir; (no. 93-102) parallel texts of tales, legends, traditions in both the upper Yukaghir and tundra Yukaghir dialects, and texts and phrases once noted down by A. Schiefner and G. von Maydell with Jochelson's corrections and annotations. Riddles, ceremonial wedding speeches, etc. are included, and (p. 238-39) a table of terms for family members and other relatives. An introductory characterization of Yukaghir folklore is given (xv p.): tales proper, mythological themes, historical narratives (friendly and warlike relations with the neighbors and Russians), religious traditions (e. g. sacrifice of dogs), the magic fights between shamans, Russian influence on the Yukaghir songs, etc. are discussed.

29884. JOCHELSON, VLADIMIR IL'ICH, 1855-1937. Po ričkam Īasachnoi i Korkodonu. Drevnii i sovremennii ūkagirskii byt i pis'mena. S.-Peterburg, 1898. 36 p., 5 plates. **Title tr.:** Along the rivers Yasachnaya and Korkodon. Ancient and present-day Yukaghir life and writing.

Contains report on author's field work in 1895-96 as a member of Sibirskov's Yakut expedition. Itinerary: from Yakutsk to the Kolyma region via Verkhoyansk; the southeasternmost point on the route was the Rassokha River, and the northernmost point reached, Fort Anyuyskaya; the return was made across the tundra and mouths of the Indigirka, Yana and Lena Rivers, thence following the Lena upstream to Yakutsk. Besides the travel narrative with notes on landscape and wildlife, climate (air temperature), and vegetation, a sketch is given of Yukaghir life and culture; occupation, work of men and women, nomadism,

tents, social organization, beliefs, relations with neighbors (especially Lamuts) trade, etc. The Yukaghir tribes lived along the Yana, Indigirka, Alazeya, and Kolyma Rivers. Before contact with Russians about 250 years ago, they had no knowledge of metals, and used stone and bone implements only. Famine and small-pox epidemics decimated their numbers. Once a more numerous and warlike people, the Yukaghirs became involved in feuds with Koryaks and Lamuts. Their original economy was one of hunting and fishing (details on technique are given); reindeer-breeding they learned only much later from the Tungus. Physically the Yukaghirs are Mongoloids, akin to Tungus or Lamuts, their language, beliefs, folklore and social organization, however, are different from the latter's and similar to those of Paleo-Siberians. The Yukaghirs in a region along the Yasachnaya (approx. 65° N. 151° E.) and Korkodon (approx. 65° N. 156° E.) were found to have preserved their pictorial writing on tree bark, similar to that of Chukchis, Eskimos, or American Indians (three specimens are pictured on plates 3-5 and explained in text).

29885. JOCHELSON, VLADIMIR IL'ICH, 1855-1937. Predvaritel'nyi otechet ob izsledovaniiakh inorodtsev Kolym-skago i Verkhofanskago okrugov. (Vsesoiuznoe geograficheskoe obshchestvo. Vostochno-Sibirskii otdel. Izvestiia, 1898. t. 29, no. 1, p. 9-52, fold. sketch map) **Title tr.:** A preliminary report on investigations of natives in the Kolyma and Verkhoyansk regions.

Contains an account of the author's field work from Oct. 5, 1894 until July 15, 1897, as a participant in the Sibirskov Yakut Expedition. He worked mostly in the region of the Kolyma River and its tributaries (see map). The life of Yakuts in the northern Verkhoyansk and Kolyma Districts is described, especially their economic conditions. The border of cattle breeding is about 68°-69° N., and north of that the Yakuts live from fishing, reindeer- and dog-breeding. The life and culture of Yukaghirs was extensively investigated. Their language and its two chief dialects are described, as are the heathen religion, folklore, family life and social organization, physical type, material culture, occupation, art and ornaments, and pictorial writings on birch bark. A list

of the linguistic and ethnographic material collected, and a plan for publications on the Yukaghirs are appended. Summary in German p. 48-52.

Copy seen: DGS.

JOCHELSON, VLADIMIR IL'ICH, 1855-1937, see also Spaulding, A. C. Current status Aleutian archaeol. 1953. No. 32200.

29886. JOCHELSON-BRODSKAIA, DINA L. Zur Topographie des weiblichen Körpers nordostsibirischer Völker. (Archiv für Anthropologie, 1906. Neue Folge, Bd. 5, Heft 1-2, p. 1-58, 14 fig., 9 tables, 4 plates, map) 31 refs. **Title tr.:** Description of the female body of the northeastern Siberian peoples. Cf. Russian version, No. 8150.

Contains an anthropometric study of the Paleo-Siberian peoples, based on material collected during the Jesup North Pacific Expedition. The author accompanied her husband on a two-year trip (1900-1902), stopping in Gishingsk, all three Kolymsk, and Verkhoyansk (see map on p. 58), and making an anthropological survey, especially of native women. Thirty-nine measurements, proposed by R. Martin, were taken down from 30 Tungus, 32 Yukaghir and 65 Yakut women (see tables on p. 52-57). Less extensive measurements of 24 points were also made by the author on 720 Koryaks, Tungus and Yukaghirs of both sexes; in addition she used the material collected by V. G. Bogoraz and A. P. Axelrod. Thus the total number of measured persons reached 1,150, and the anthropometric data evaluated in this study covers Koryaks, Kamchadals, Yukaghirs, Asiatic Eskimos, Chukchis, Tungus, and Yakuts. From published sources, references are made also to the American Eskimos and North Pacific Coast Indians. Measurements, indexes and diagrams for men and women are given separately. Several chapters are devoted to evaluation of special measurements made on about 120 native women: height and/or width of ears, nose, shoulders, manubrium, symphysis and pelvis, position of nipples and navel, length of body and extremities, and the span of arms (p. 19-43). Some conclusions were drawn; the Yakuts are closer to the Mongolian type than are the Tungus; among the Paleo-Siberians, the Yukaghirs have the smallest stature, the Kamchadals have the lowest length-breadth index of

head, the Chukchis are the tallest and have the greatest breadth of head; the Asiatic Eskimos are smaller than those of Alaska, although a little taller than Chukchis, and the length-breadth index of Asiatic and Alaskan Eskimos is almost the same; the absolute and relative values of female anthropometric data are lower than those of male of the same race, except length-height index of head which is often higher among women than men; the female body (trunk) is relatively longer among races of short, than those of tall stature. **Copy seen:** DLC.

29887. JOCHIMSEN, MATHIS, 1680-1733. Mathis Jochimsøns grønlandske relationer 1733. Efter et håndskrift i privat eie. (Oslo. Universitet. Ethnografiske museum. Skrifter, 1928. Bd. 4, hefte 3, p. 141-84) **Title tr.:** Mathis Jochimsen's thoughts on Greenland 1733. After a manuscript in private possession. **Half title tr.:** . . . considerations on the observations made in Davis Strait off Greenland, arranged so that it may easily be determined whether trade with that country would be beneficial.

Contains text of Ms. dated A. D. 1733, on results of the author's expedition to Greenland. He is primarily interested in possibilities of colonization, and describes the plant and animal life, the mineral resources. Wild plants are listed and medicinal ones specified (in part from Dr. Claus Kilding's observations), vegetable gardening, forest and drift wood, possibilities for cultivation of grass-producing land for pasturage, also for economic utilization of the abundant black crowberries are noted. The native population, such sea and land animals as seals, bear, reindeer, walrus and whale, the domesticated dog, etc., are dealt with as to occurrence and economic importance, birds, insects and worms are mentioned briefly. Mining possibilities are discussed and minerals and rock-specimens brought home are listed. Summary in English, p. 183-84.

29889. JOHANSEN, HANS. Polarraeve paa Kommandørøerne. (Grønlands-posten, 1950. Aarg. 9, nr. 4, p. 51-53; nr. 5, p. 63-64) **Title tr.:** Polar foxes on the Commander Islands.

Contains a geographical description of the islands, where the author directed a study of the fur seal, sea otter and polar fox for the Russian Government in 1928-1931. Their abundant fish resources are noted, particularly salmon, caught by thousands, and dried for dog and fox food. The polar fox and some imported reindeer are the only land mammals on the islands. The biology of the polar fox is discussed in some detail. Its fur is not so fine as that of the Greenland fox but the animal is bigger. Author's present purpose is to apply the results of his study to increase the arctic fox population in Greenland. **Copy seen:** DLC.

29894. JOHANSSON, OSCAR VILHELM, 1878- . Det fenologiska observationsmaterialet i Finland och provstudier av detsamma. Helsingfors, 1945. 118 p. tables. (Bidrag till kännedom af Finlands natur och folk (Finska vetenskaps-societeten), häfte 88, no. 8) **Title tr.:** The phenological observation material in Finland and some examples of the methods used.

The author presents a survey of phenological observation in Finland from 1740 on, but especially for the period beginning with the founding of the Finnish Scientific Society in 1838. The statistical methods and symbols used are

explained, and typical phytophenological, zoophenological, and climatological data are interpreted and correlated.

Copy seen: DLC.

29895. JOHANSSON, OSCAR VILHELM, 1878- . Finlands sommarmartemperatur. Helsingfors, 1949. 39 p. (Bidrag till kännedom af Finlands natur och folk (Finska vetenskaps-societeten), häfte 93, no. 2)

Contains an analytical discussion mainly based on earlier work by Keränen, Ångström, Hamberg, Wild and others, data of which are subject to comparison with more recent observations. An isotherm-chart for the months June, July and August, 1901-1930, is given along with tabulated data and graphical presentation of the results of the study. The mean values of summer temperature (1880-1915) in Finland between 61°-64° N. lat. as compared with corresponding Swedish data, show decline with time. The secular variation (table 2-5) is discussed. A northerly distortion of the limit between Arctic Gulf Stream climate and the real polar climate may explain the possible change toward maritime climate. Summary in German.

Copy seen: DLC.

29896. JOHANSSON, OSCAR VILHELM, 1878- . Några drag ur meteorologins historia i Finland före 1800. (Terra, 1913. v. 25, p. 185-209) **Title tr.:** Historical sketches of the development of meteorology in Finland before 1800.

Meteorology and astronomy were inseparably connected in Finland until the early part of the 18th century. In 1737, Abraham Johannes Foug, no doubt influenced by Anders Celsius Maupertius, and others, started the first regular instrumental observation series in Finland (at Torneå). Another series was begun in 1748 at Åbo by Johan Leche, whose work both as an observer and as an author on meteorological subjects is reviewed. Other important meteorologists were Leche's contemporaries Per Kalm and Carl Fredrik Stierwald, whose work on the parish of Laihela includes the results of four years of meteorological observations (1751-1754). The somewhat individualistic approach of these men gave way after 1785 to the adoption of the internationally approved changes carried out by the Societas Meteorologica Palatina of Mannheim. Brief mention

is made of other observation series conducted in Uleåborg and northern Finland.

29897. JOHANSSON, OSCAR VILHELM, 1878- . Om det ovanligt höga lufttrycksmaximet den 22 jan. 1907. Helsingfors, 1907. 17 p., 3 plates (maps), diagrs., tables. (Finska vetenskaps-societeten. Översigt af förhandlingar, 1906-1907. Bd. 49, no. 15) **Title tr.:** The exceptionally high air pressure maximum of Jan. 22, 1907.

The course of an anticyclone which passed over Europe between Jan. 19-26 is traced from the Northern Ural along the Arctic Ocean and the White Sea to Lake Ladoga and the Gulf of Finland, whence it moved east to the Gulf of Riga and Poland. It attained a height of close to 800 mm. [sic.] Its form, rate of movement and attendant meteorological anomalies are described. As the anticyclone passed over the southeastern part of Finland only, the meteorological data for that country are limited to southern weather stations. A comparison with earlier air pressure maxima is included.

29898. JOHANSSON, OSCAR VILHELM, 1878- . Riktlinjer och problem för meteorologin i Finland, speciellt klimatforskningen. Helsingfors, 1949. 31 p. (Bidrag till kännedom af Finlands natur och folk (Finska vetenskaps-societeten), häfte 93, no. 1) **Title tr.:** Fundamental features and problems of meteorology, and in particular climatic research in Finland.

Contains the major part of author's final lecture (May 10, 1948) as professor at the University of Helsinki. Following a brief historical review, stressing study of early works and the classic literature, some future aspects of the subjects are discussed. Author's opinion that the efforts to improve upon the synoptic practice tends to retard the development and progress of climatology is exemplified. The contributions of Bergerov and others to the (partly dynamic) problems, under discussion are cited. Means, fundamental features and aims of Finnish work are outlined and ways briefly noted to further the science of meteorology in Finland.

29903. JOHNSON, H. M. Preliminary ecological studies of microclimates inhabited by the smaller arctic and sub-arctic mammals. (*In: Alaskan Science Conference* . . . 1951. Proceedings, pub. 1953. p. 125-31, 3 fig.)

Contains a study of temperatures in small depressions, throughout and beneath the snow, compared with typical macroclimatic winter conditions. The

work was carried out at the Arctic Aero-medical Laboratory, Fairbanks, Alaska, Jan. 30-Mar. 17, 1951. Temperatures at the base of the snow were commonly 25° F. or more, even when air temperatures were -40°, -50° F. or lower. Air spaces one to two inches high are often formed in this relatively warm layer between the snow and the ground. In this sub-snow zone, small mammals (mice, weasels) were observed to spend much of the winter and here they have their complex tunnels.

29904. JOHNSON, HUGH A., and D. L. IRWIN. The position of agriculture in Alaska's current economy. Palmer, Alaska, Jan. 1953. 15 p. 9 tables. Mimeographed. (Alaska. Agricultural Experiment Station. Special report no. 1)

Contains statistical report designed to explain some of the problems and "apparent discrepancies in the agricultural picture in Alaska." A brief summary of agricultural settlement and development in the Tanana and Matanuska valleys is given. Alaskan population growth, volume and type of food shipments to Alaska, numbers of farms and cropland acreages, and agricultural statistics, with emphasis on dairying, are discussed in turn. It is concluded that "Alaska probably always will have an economy of family-size farms" which will, in general, be more efficient than similar farms in the continental United States.

Copy seen: DA.

29905. JOHNSON, HUGH A. Present and potential agricultural areas in Alaska. Palmer Alaska, Feb. 1953. 28 p. illus., text map. (Alaska. Agricultural Experiment Station. Bulletin 15)

Contains general information for prospective Alaskan farmers. Major agricultural regions (Southeast Alaska, Kenai Peninsula Anchorage-Matanuska-Susitna area, Tanana valley and Alaska Peninsula) are briefly described. Crop yield and markets are noted. A list is given of nine Federal and Territorial agencies in Alaska dealing with lands, settlement, farm development, markets, conservation, and research, with brief notes on their functions.

Copy seen: DA.

29906. JOHNSON, HUGH A. The role of agricultural economics in Alaska. (*In: Alaskan Science Conference* . . . 1951. Proceedings, pub. 1953. p. 55-57)

Contains a brief survey of the work of

the Alaska Agricultural Experiment Station. In farm management research begun in 1947, farm organization, wages, and incomes are studied. In marketing research, studies are made of the nature and adequacy of marketing, processing, storage, transportation, and potential markets. Special surveys of crops, dairy products, and consumer buying habits have been made. Research needs are outlined. *Copy seen:* CaMAI; DLC.

29907. JOHNSON, HUGH A. Urban use of Alaskan farm products. Palmer, Alaska, Sept. 1953. 20 p. illus., 4 graphs, table. (Alaska. Agricultural Experiment Station. Bulletin 16)

Contains results of interviews with 300 families in Fairbanks and Anchorage in summer 1950. Recommendations to producers and retailers for practices to increase demand for Alaskan-grown produce are listed by product. Consumer use of such truck crops as potatoes, carrots, other root crops, green and leafy vegetables, and berries, also of eggs and milk is discussed in some detail.

tr.: Seismic ice thickness measurements in Greenland and Iceland.

"Seismic determinations of ice thickness made in Greenland from 1949-1951 [by the Expéditions polaires françaises, P.-É. Victor] were reported at a meeting of the German Geophysical Soc. (Aug. 29, 1952). The determinations were based on altitude determinations of the surface and ice thickness measurements by reflection methods. The refraction method yielded values 50-100 m. lower at two specific locations, which might be ascribed to a boundary layer. The Franco-Icelandic Vatnajökull-Expedition (March-April 1951) made the first ice thickness measurements in Iceland, 360-1040 m."—SIPRE.

29914. JOSET, ALAIN, 1903-1951. Sondages sismiques. (In: Expéditions polaires françaises. Expédition arctique, 1948-1951. Campagne au Groenland 1950; rapports préliminaires, 1952. Série scientifique no. 15, p. 43-56, incl. illus., text map, section, table, graphs, diagrs.) **Title tr.:** Seismic soundings.

Contains a discussion of depth studies of the Greenland icecap carried out by a seven-man party led by the writer. From June 10 to Sept. 6, 1950, work was done along a line from Camp IV near the west coast to the Central Station of the main expedition, and along two or three north-south lines. The equipment and instruments used and the personnel are listed. Working conditions and the effect of weather on personnel are discussed and an itinerary is presented. The installation of equipment, seismic methods, and wave propagation are described. A profile of the terrain under the ice sheet is given as a result of the soundings. A mountain chain on the west coast reaches an elevation of about 600 m.; on the east coast a higher chain reaches 2,000-2,300 m. The area between apparently consists of a dissected peneplain at approximately sea level, with valleys 200-300 m. below sea level. Other conclusions are noted and recommendations for further study are presented.

29915. JOSET, ALAIN, 1903-1951, and J. J. HOLTZSCHERER. Sondages sismiques au Groenland. Première partie. Études des vitesses de propagation des ondes sismiques sur l'inlandsis du Groenland. (Annales de géophysique, Oct.-

Dec. 1953. t. 9, fasc. 4, p. 329-44, 6 plates, text map, graphs) 16 refs. Reprint issued as: Expéditions polaires françaises Rapports scientifiques, N. III. 2. **Title tr.:** Seismic soundings in Greenland. Pt. 1. Study of the velocities of seismic wave propagation on the Greenland inland ice.

Methods and apparatus used in P.-É. Victor's Greenland expedition in 1950-1951 for producing waves are described and resulting seismograms shown. Stations were made between the Station Centrale (70°55' N. 40°30' W.) and Camp IV (69°39' N. 49°31' W.) 40 km. from the western border of the inland ice. Work at each is outlined, and results and observations shown in graphs. Three rock layers of varying composition were found under the ice. Varying velocities of waves with depth and mean velocities of longitudinal waves are discussed. J. P. Rothé in introduction reviews previous seismic work in Greenland and pays tribute to the senior author, killed on the icecap Aug. 4, 1951.

29918. JOURNAL VON RUSSLAND. Ueber die Tungusen. (Journal von Russland, 1794. Jahrg. 2, Bd. 1, Sept., no. 3, p. 191-208; Oct., no. 4, p. 260-78)

Title tr.: The Tungus. The text is stated to have been translated from St. Petersburg's historical calendar for 1788.

Contains a description of the people: their origin, occupation (cattle or reindeer breeding, and hunting, hence a division of the people into meadow or horse, and forest or reindeer Tungus). Their religious beliefs are outlined: a supreme god Buga and his adversary Bunnika, legends of creation, a lamaistic clergy with holy scriptures, sacrifices and prayers, holy pictures but no idols, also shamans as well as lamas. Burial ceremonies are noted; psychological characteristics are indicated: hospitality, laziness and suspicion, scouting ability and love of riding among the horse-breeding Tungus. Their health and hygiene, folk medicine and longevity; their food and cooking, beverages: tea, an alcoholic drink *araka*, made from fermented cow's milk; their tent and household utensils are described. Tungus living by fishing are noted; as well as attempts at Christianization, customs, patriarchal family organization. The story of prince Gantimur is related, and statistics given on several Tungus tribes.

29938. KALININ, I. M. O rasprostranenií samoedov v proshlom; iz novykh arkhivnykh materialov. (Vsesoiúznoe geograficheskoe obshchestvo. Izvestiia, 1929. t. 61, vyp. 1, p. 77-80) **Title tr.:** The dissemination of the Samoyeds in the past; from new archival materials.

Contains excerpts from the account books for 1660-1666, of the Krestnoi monastery at Ponoy on Kola Peninsula. These record trade with Samoyeds, evidence that the Samoyeds of European Russia, now nomadizing between the Mezen' River and the Urals, once reached as far west in the present Arkhangel'sk province as the basin of the Onega River and the shores of Lake Onega. The Samoyeds must have been living in the area more or less permanently for they were obliged to pay a tithe to the monastery in wild reindeer skins, one for every ten animals killed (records for 1664-1665). **Copy seen:** DLC.

29939. KALININ, I. M. Torgovyé snosheniia loparel' s russkimi v polovine XVII veka. (Vsesoiúznoe geograficheskoe obshchestvo. Izvestiia, 1929. t. 61, vyp. 1, p. 59-76) **Title tr.:** Commercial contacts of Lapps with Russians in the middle of the 17th century.

Contains documented account of the activities of early Russian missionaries, traders and colonizers among the Lapps of Kola Peninsula. Trade between the Lapps and the Krestnyi monastery at Ponoy is cited from the latter's account books for 1659-60, which record furs, reindeer products, salmon and wild-fowl feathers bought, and rye and barley flour, oatmeal, grits, salt and butter sold. The monastery had a trade monopoly and profited from trade with both Lapps and the Russian settlers. **Copy seen:** DLC.

29940. KALITIN, NIKOLAI NIKOLAE-VICH, 1884-1949. Rasseyannaiá radiatsiia atmosfery v usloviakh Arktiki. (Akademiia nauk SSSR. Izvestiia. Otdel. matematicheskikh i estestvennykh nauk.

Seriia geograficheskaiá i geofizicheskaiá, 1938. t. 2, p. 129-47, tables, graphs) 3 refs. **Title tr.:** Diffuse radiation of the atmosphere in the Arctic.

"Actinometric observations at Calm Bay (Tikhaya Bukhta), Uyedineniia Island and Cape Shmidt (on the Chukotsk Peninsula) during 1934-1937 indicated increased diffuse radiation as compared with the data at Slutsk. A greater condensation turbidity during clear days and lower cloud density during cloudy days may produce such increased radiation. An arctic snow cover of about ten months also increases the value of diffuse radiation particularly when the sun is low on the horizon. Observations at Slutsk under clear skies showed that snow increases diffuse radiation from 65 percent when the sun is near the horizon to 11 percent when the sun is in the 55° position. Snow in the presence of dense clouds also increases diffuse radiation."—SIPRE. **Copy seen:** DLC.

29941. KALITIN, NIKOLAI NIKOLAE-VICH, 1884-1949. Solnse Arktiki. (Priroda, 1940, no. 8, p. 21-27, illus.) **Title tr.:** The sun of the Arctic.

Contains a study of solar radiation in the arctic regions, with tables on (1) the maximum length of the day and night for various altitudes, (2) the number of hours of solar light, (3-4) the intensity of solar radiation and the values of total radiation; based on the observations at Tikhaya Bukhta (Zemlya Frantsa Iosifa), Tiksi Bukhta at Lena delta, Cape Shmidt (Chukotskiy Poluostrov), Novaya Zemlya and Spitsbergen. **Copy seen:** MH.

29942. KALITIN, NIKOLAI NIKOLAE-VICH, 1884-1949. Summy tepla solnechnoi radiatsii na territorii SSSR. (Priroda, 1945, no. 2, p. 37-42, illus., text map) **Title tr.:** The amounts of heat from solar radiation in the territory of the U.S.S.R.

Deals with the methods of calculating total solar radiation, used at 25 Russian stations. Annual and seasonal total radiation is tabulated on the basis of data from ten stations, including those at Tiksi, Tikhaya Bukhta, Yakutsk. Distribution of total radiation throughout the U.S.S.R. is shown on map. The relationship between total solar and diffused radiation, and the influence of altitudinal position on the total solar radiation are indicated in diagrams. **Copy seen:** DLC; MH.

Contains discussion of Finnish national parks (open to the public) and nature parks (reserved for scientific research)

which have been and are being established on state-owned land under the Nature Protection Act of 1923. Maps show the location of these wildlife and forest sanctuaries, seven of which are north of the Arctic Circle. These are Malla, Kevo, Lemmenjoki, Pallas-Ounas, Sompio, Maltio, and Pyhäntunfuri. Other protected areas on private land are also briefly noted.

29949. KAMCHATKA, 1740-1940: ūbilenyi sbornik v pamāt' 200-lētiā osnovaniā gor. Petropavlovsk na Kamchatkē. Shankhaġ, Izd-vo "Slovo", 1940. 248 p. illus., ports. **Title tr.:** Kamchatka, 1740-1940; collection of papers commemorating the 200th anniversary of the foundation of Petropavlovsk in Kamchatka.

Collection of several score short papers, sketches, verses, etc., profusely illustrated with photographs, written by Russian emigrés and edited by A. A. Purin. They deal with historical topics, missionary activities, economic conditions, natural resources, political events up to the introduction of the Soviet rule in 1922, and activities of former residents of Kamchatka in exile. Of the numerous papers, the following (titles tr.) appear

in this Bibliography under their authors' names.

NESTOR, *Archbishop*. Outline of the Kamchatka district and diocese, p. 39-65.

GERASIMOV, V. The Kamchatka orthodox fraternity, p. 67-78.

PURIN, A. A. On past and present of Kamchatka, p. 89-142.

ORLOV, M. F. In Kamchatka in 1921 and 1922, p. 143-53.

MUTOVIN, M. F., and A. A. PURIN. Resources of Kamchatka Province and their utilization, p. 155-95.

PURIN, A. A., *editor*. Transportation and air communication in Kamchatka Province, p. 205-216.

TSAREDVORTSEV, K. G. My trip to Anadyr', p. 222-28.

KOZLOV, N. N. Memoirs of a Kamchatka fish dealer.

KAMOTA, M., *see* Ogata, K., and others. Influence sodium chloride, resistance to cold. 1952. No. 31063.

29951. **KAMSHILOV, MIKHAIL MIKHAILOVICH.** Kolichestvo planktonnykh organizmov v poverkhnostnykh vodakh Barentsova i Belogo moria. (Akademiia nauk SSSR. Doklady, 1951. nov. seriia, t. 76, no. 1, p. 131-32) *Title tr.*: The amount of plankton organisms in upper layers of waters in the Barents and White Seas.

Contains the results of a quantitative study of plankton organisms, carried out by the Murman Biological Station in the summer and fall of 1949; followed by discussion of accumulated data on the phyto- and zooplankton of these seas.

Copy seen: MH.

29952. **KAMSHILOV, MIKHAIL MIKHAILOVICH.** Opredelenie vesa *Calanus finmarchicus* Gunner na osnovanii izmereniia dliny tela. (Akademiia nauk SSSR. Doklady, 1951, nov. seriia, t. 76, no. 6, p. 945-48) *Title tr.*: Determination of the weight of *Calanus finmarchicus* Gunner on the basis of its length.

Deals with a method of finding the weight of this crustacean, by measuring its length; a diagram and a formula are given and discussed (p. 946). The application of this method to other plankton species is explained and coefficient of correlation for various species given (fig. 2, table 2). The study is based on the material from Barents Sea.

Copy seen: DLC; MH.

29953. **KAMSHILOV, MIKHAIL MIKHAILOVICH.** Osobennosti raspredeleniia diatomovoi vodorosli *Rhizosolenia hebetata* f. *semispina* v planktone. (Akademiia nauk SSSR. Doklady, 1950. nov. seriia, t. 75, no. 5, p. 747-48) *Title tr.*: Peculiarities of the plankton distribution of a diatom, *Rhizosolenia hebetata* f. *semispina*.

Contains a study of distribution of a diatom *alga*, *Rhizosolenia hebetata* f. *semispina*, in plankton of the Barents and White Seas and Kandalaksha Bay (see table), carried out in the summer and fall of 1949. It is concluded that the great abundance of this diatom in certain sections of the White Sea (spotty distribution) is caused by the favorable hydrological regime (lower salinity) of these localities.

Copy seen: MH-Z.

29954. **KAMSHILOV, MIKHAIL MIKHAILOVICH.** Tsikl razmnzheniia *Calanus finmarchicus* Gunner na vostochnom Murmane. (Akademiia nauk SSSR. Doklady, 1952, nov. seriia, t. 85, no. 4, p. 929-32) *Title tr.*: The reproduction cycle of *Calanus finmarchicus* Gunner in eastern Murman waters.

Contains results of a study carried out in various localities on the eastern Murman coast in 1950 and 1951. The tabulated data (tables 1-2) show that two cycles (in spring and in summer) were observed both years. Observation of some other zoologists in 1931, 1932, 1939 and 1940 gave the same results.

Copy seen: MH; MH-Z.

29955. **KAMSHILOV, MIKHAIL MIKHAILOVICH.** Zimniil zooplankton Belogo moria. (Akademiia nauk SSSR.

Doklady, 1952, nov. seriia, t. 85, no. 6, p. 1403-1406) **Title tr.:** Winter zooplankton of the White Sea.

A comparative study of the winter zooplankton of the White and Barents Seas was carried out in Kandalaksha Bay and in eastern Murman waters in 1951 and 1952. Results of analyses of 43 plankton samples from the White and 34 from Barents Sea are incorporated in table 1. Barents Sea is found to be richer in number of species (40 and 25) but the biomass in the White Sea is much larger; *Calanus finmarchicus* is especially abundant in White Sea winter plankton.

29963. KANNISTO, ARTTURI, 1874-1943. Forschungsreisen. (Finnisch-ugrische Forschungen, 1902. Anzeiger, Bd. 2, no. 2, p. 83-84) **Title tr.:** Expeditions.

Contains report on his travels among the Voguls in 1901-1902 sponsored by the University of Helsinki and Finno-Ugric Society. Six dialectic vocabularies were collected, religious ceremonies photographed, folklore collected, and two Vogulian Mss. written before 1815 discovered.

Copy seen: InU.

29964. KANNISTO, ARTTURI, 1874-1943. Forschungsreisen. (Finnisch-ugrische Forschungen, 1906. Anzeiger, Bd. 6, no. 1-3, p. 69-72) **Title tr.:** Expeditions.

Contains report on an expedition to the Voguls and Ostyaks which lasted five years and four months in 1901-1906. It was sponsored by the Finno-Ugric Society. Author visited practically all localities where these people live, staying for several months in some, learning their dialects and mode of life, collecting folklore, ethnographical objects, etc. Results: eleven dialects were investigated; 30,000 words noted down; 150 melodies recorded by phonograph, 300 photographs taken, 350 objects of folk art and craft acquired, etc.

Copy seen: InU.

29965. KANNISTO, ARTTURI, 1874-1943. Ueber die wogulische Schauspielkunst. (Finnisch-ugrische Forschungen, 1906. Bd. 6, p. 213-237, 9 illus.) **Title tr.:** On the Vogulian theater.

Contains description of plays performed at the bear festivals, from the author's observations among the Sos'va Voguls. The plays are of humorous character, often rude or vulgar, making fun even of religious ceremonies, heathen and Christian. The performers are always men, disguised, and wearing masks of birch bark. They talk and sing, play pantomime, use puppets; every play ends with a dance to the accompaniment of a native zither, or without music. A war dance using wooden swords is also known. The contents of several plays

are given in detail and may be termed farce. Both men and spirits (forest and water spirits, the devil) are presented in embarrassing (comic) situations. Some plays imitate the Christian legends of the saints.

29973. KARELIN, DMITRIĬ BORISOVICH, 1913-1953. Nekotorye dannye o ledianom pokrove Arktiki. (Priroda, 1937. t. 26, no. 6, p. 32-38, table, diagrs.) **Title tr.:** Some data on the arctic ice cover.

"The formation, growth and melting of sea ice along the arctic coast were studied. A formula for the determination of ice thickness was developed using the sum total of temperatures below 0° C. as a basic factor. The theoretical calculations showed an excellent agreement with the observed data. Ice forecasts were prepared from data obtained from polar stations. A map was prepared showing specific freezing and breakup centers and their patterns of movement from Matochkin Shar to the outlet of Kolyma River."—SIPRE.

29974. KARELIN, DMITRIĬ BORISOVICH, 1913-1953. Povysim kachestvo ledovykh prognozov. (Sovetskaiâ arktika, 1940. no. 8, p. 25-29, illus.) **Title tr.:** Let's improve the accuracy of ice forecasts.

"Long-range ice forecasts depend on wind, temperatures, pressure distribution, and other related factors. The accuracy of forecasts ranges from 100 percent for arctic areas adjacent to the European mainland to 40 percent for the eastern Arctic. The methods of periodic weather reporting by various stations along the arctic coast are briefly reviewed. More frequent reports are needed to furnish forecasts for navigation routes at least every ten days. The forecasts should state existing and expected ice conditions with a high degree of accuracy."—SIPRE.

29977. KARJALAINEN, KUSTAA FREDRIK, 1871-1919. Dem Andenken Anton Regulys. (Finnisch-ugrische Forschungen, 1908. Bd. 8, p. 1-7) *Title tr.:* To the memory of Antal Reguly.

Contains biography of the Hungarian scholar (1818-1858), who made expeditions to the Lapps in 1840, Voguls, Ostyaks and Samoyeds in 1843-46. He traveled in the region between the Urals and the Rivers Irtysh and Ob', collected folk poetry (mostly from the Ostyaks), and also linguistic, ethnographical and archeological material. He published an ethnographical and geographical map of the northern Ural region in 1846.

29978. KARJALAINEN, KUSTAA FREDRIK, 1871-1919. Forschungsreisen. (Finnisch-ugrische Forschungen, 1901. Anzeiger, Bd. 1, no. 1-2, p. 177-78; and 1902, Bd. 2, no. 2, p. 83) *Title tr.:* Expeditions.

Contains reports on journeys to the Ostyaks in 1898-1901. His principal task was to compile an Ostyak dictionary as complete as possible. He also collected folklore: phonograph recordings of songs, and ethnographical material: the first authentic photographs of the Ostyak sacrificial ceremonies were made. A statistical survey of the Ostyak population was carried out. *Copy seen:* InU.

29979. KARJALAINEN, KUSTAA FREDRIK, 1871-1919. Literatur über das Ostjakische und die Ostjaken. (Finnisch-ugrische Forschungen, 1906. Anzeiger, Bd. 6, no. 1-3, p. 1-32) *Title tr.:* Literature about the Ostyaks and their language.

Contains critical evaluation of six works by S. K. Patkanov and four by Josef Pápay. The greatest merit of Patkanov was his collection of southern Ostyakian folk poetry, mythological beliefs, and his description of their material and spiritual culture. His linguistic works are said to lack exactness in transcription of words, etc., due to the brevity of his time (two weeks) among the Ostyaks, hence limited knowledge of their language.

Pápay, a Hungarian, lived among the Ostyaks of Obdorsk (near the mouth of the Ob' River), in 1898-99; his chief contribution was deciphering Vogulian poetry texts written down by Antal Reguly (1818-1858). Pápay also collected several epic songs himself and attempted to describe dialects, with limited success; his transcription too, according to Karjalainen, contains many weak points. Both Patkanov and Pápay tried to reconstruct the former social organization among the Ostyaks from their epic songs. Karjalainen disagrees with Lehrberg's and Pápay's theory of the Ostyaks' and Voguls' former settlements being between 56° and 67° N. lat. and thinks they formerly lived in the eastern part of European Russia.

29986. KARPLUS, MARTIN. Bird activity in the continuous daylight of arctic summer. (Ecology, Jan. 1952. v. 33, no. 1, p. 129-34, illus., table) 22 refs.

Contains account of a brief study of activity cycles of three nesting species (robin, thrush, redpoll) in the arctic summer. The observations led to the conclusion that the sleep-wakefulness cycle of these birds is governed by the environmental light. The nestling period in a robin family was four days shorter than in temperate latitudes; this is associated with a rise in growth rate resulting from the greater number of hours per day during which food was supplied by the parents.

29993. KATZ, H. R. Journey across the nunataks of central East Greenland, 1951. (Arctic, Mar. 1953. v. 6, no. 1, p. 3-14, 11 illus. incl. map, diagr.) 11 refs.

Contains an account of a trip made in Aug. 1951 by a three-man party from the Lauge Koch expedition, which met and joined for part of the journey on the icecap, a weasel-equipped party of the French polar expedition of P.-É. Victor. The main results of this trip are briefly described here; for the scientific results, maps, etc., see *Arctic Bibliography*, No. 23166. From Ella Ø (72°51' N. 25°02' W.) a circular route within roughly 72°30'-74° N. 31°-24° W. was covered by plane, weasel, and the northern leg of it, devoted to the study proper, on foot. Observations on temperature, winds, ice and glacier

conditions were also made during the preceding, southwestern and western leg of the journey on the weasels in cooperation with the French party. Geology of the westernmost part of central East Greenland was found to be very complex, crustal movements having apparently occurred up to the most recent epochs; it was also discovered that the Caledonian belt extends westward beyond any outcrop that can be found and, that during the Late Precambrian the geosynclinal trough had its central parts west of the present fjord-region; the western foreland of the Caledonian Syncline is therefore expected to be reached in the northernmost area, somewhere between 80° and 82° N.

29994. KATZ, H. R. Raid géologique à travers les nunataks de l'est du Groenland, à la latitude 74° N. Note préliminaire sur des études faites en collaboration avec la "Lauge Koch-Ekspedition" sur la nord-est du Groenland. (In: Expéditions polaires françaises. Expédition arctique, 1948-1951. Campagne au Groenland 1951; rapports préliminaires, 1953. Série scientifique no. 16, p. 95-106, illus., 2 fold. maps) ref. **Title tr.:** A geologic traverse of the nunataks of East Greenland at latitude 74° N. Preliminary note on studies made in collaboration with the Lauge Koch Expedition on northeast Greenland.

Contains record of observations made by a party of three led by the author, July 29-Aug. 29, 1951. Equipment and program are briefly described, and a chronological account of the journey given. From Ella Ø the group went west by airplane and skis to Cecilia Nunatak on the edge of the inland ice, north by weasel over the ice to Hobbs Land (approx. 74° N. 30° W.), east and southeast by foot and skis to the east coast of Strindbergs Land (approx. 73°45' N. 24°30' W.), and thence by aircraft to Ella Ø. Climate, equipment, terrain, vegetation, and geology are reported. The Caledonian mt. chain was found to extend at least as far west as rock outcrops occurred. Sedimentary strata, and Tertiary (?) basalt capping mountains over 2000-2400 meters are briefly described. **Copy seen:** CaMAI.

30003. KEITHAHN, EDWARD LINNAEUS, 1900- Notes on the origin of the totem pole. (In: Alaskan Science

Conference . . . 1951. Proceedings, pub. 1953, p. 240-45)

Contains discussion on the age and origin of totem poles, developed most fully among the Haidas of the Queen Charlotte Islands: are they prehistoric or post-European? The largest and finest of them were constructed between 1830 and 1880, and iron-bladed adzes were required for their carving. The argillite carvings developed after 1775. The tradition of carving interior house posts, graveyard figures and miniature figures is old, however, and presumably goes back to Asiatic prototypes. The Asiatic art style could have been brought to the Pacific Northwest by shipwrecked sailors, or by wooden sculptures cast upon the coast by drift. The shaman's charms and carved sticks or canes may be also considered as prototypes of totem poles.

30008. KELSALL, JOHN P. Caribou calving studies, 1951. (Arctic circular, Jan. 1953. v. 6, no. 1, p. 6-7)

Contains an account of caribou calving and calves in the Bathurst Inlet area (67°30' N. 108°30' W.) of Mackenzie District. Over 5,000 caribou with 500 calves were observed in May; the calves were found to be most precocious, swimming when about 12 hours old and at one day's age outrunning (tired) men. The investigation was made by the author and N. G. Perret, while engaged in the continuing Barren Ground Caribou Study for the Canadian Wildlife Service.

Contains description, measurements, indexes, etc., of arms and legs, head and face, color of skin, hair and eyes; notes on bones, proportions of the Lapp body, characterization of the Lappish type, temper, etc.

Copy seen: DLC.

30011. KEL'SIEV, A. I. Otchet ob antropologicheskikh rezul'tatakh ego poezdki na Sïever Rossii. (Obschestvo liubitelei estestvoznaniia, antropologii i étnografii. Izvestiia, t. 27. Antropologicheskii otdel. Trudy, 1878. t. 3, p. 350-54) **Title tr.:** Report on the results of his anthropological journey to the Russian North.

Contains account of a trip to the Kola Peninsula and Lapland in 1877; note of the anthropological, archeological and linguistic materials collected. Thirty-five Lapps from 11 places were measured, etc.

Copy seen: DLC.

30012. KEL'SIEV, A. I. Voprosy po izucheniiu loparef. (Obschestvo liubitelei estestvoznaniia, antropologii i étnografii. Izvestiia, t. 27. Antropologicheskii otdel. Trudy, 1878. t. 3, p. 114-22) **Title tr.:** Questions on studies on the Lapps.

Contains a critical review of articles in current periodicals on the physical anthropology of Lapps; description of the Lapp skull, differences between the Russian and Swedish Lapps, etc.

Copy seen: DLC.

30013. KENK, ROMAN, 1898- The fresh-water triclads (Turbellaria) of Alaska. (U. S. National Museum. Proceedings, 1953. v. 103, no. 3322, p. 163-86, 5 fig. (incl. map), 3 plates). 32 refs.

Contains a study of triclad flatworms collected in streams, tundra lakes and pools, etc., during a trip in the summer of 1950, mainly along Steese, Elliot and other highways of the Territory and

around Point Barrow and Umiat. Four species, all new, are described: *Phagocata nivea* sp. n.; *Polycelis borealis* n. sp.; *Dendrocoelopsis piriformis* n. sp. and *Dendrocoelopsis alaskensis*, n. sp. The findings suggest close relationship of the Alaskan fresh-water fauna with that of East Asia. The study was aided by the Arctic Institute of North America and the U. S. Office of Naval Research.

Contains a description of a new species of dragonflies, *Somatochlora walkeri*, male, collected on the Kuskokwim River, Alaska, by A. Stecker; and critical notes on the following related species: *S. hudsonica* (Fort Resolution, Mackenzie District), *S. albicincta*, female (Kodiak Island) and *S. septentrionales* (Hudson Bay region and Labrador).

Copy seen: DLC; MH-Z.

30015. KENNEDY, CLYDE. Cannibal cod in an arctic lake. (Natural history, Feb. 1953. v. 62, p. 78-82, illus.)

Contains a popular account of investigations made on Ogak Lake (62°53' N. 67°13' W.) at the head of Ney Harbour, southern Baffin Island. Depth, temperature and salinity were determined the latter revealing the bottom water to be salty. Landlocked, cannibalistic cod living in the lake are described. Other arctic lakes with known land-locked cod, especially Lake Mogil'noye on Kildin Island, are also noted. The study was made in 1951 by Dr. Maxwell Dunbar while with the Canadian Eastern Arctic Fisheries Investigation on the *Calanus*, and in 1952 by a two-man party from McGill University, the McCall-Dawson Expedition.

Copy seen: DLG.

30016. KENNEDY, GEORGE CLAYTON, 1919- Geology and mineral deposits of Jumbo basin, southeastern Alaska. Washington, D. C., U. S. Govt. Print. Off., 1953. 46 p. illus., 10 maps (7 fold.), 3 graphs. (U. S. Geological Survey. Professional paper 251) 82 refs.

Contains a report of investigations during July 17-Sept. 24, 1944, for iron and copper in the Jumbo basin, Prince of Wales Island. The location, physical geography, and general geology of the

region are described; then follows detailed report on mineralogy, petrology, and ore formation. All known ore deposits are in contact with or lie near an intrusive stock occupying about ten sq. mi. in the eastern part of the basin. Magnetite deposits are discussed. Analyses of rocks, minerals, and ore samples are given. **Copy seen:** DGS; DLC.

30017. KENNEDY, KAY J. Oil development in Alaska. (Western miner, May 1953. v. 26, no. 5, p. 44-45)

Contains an historical summary and chronology of petroleum investigations in Alaska since discovery of oil in 1853. Development has been discouraged by (1) government ownership of land, (2) antiquated land laws, and (3) lack of capital for private companies. Three small oil companies and their areas are listed. The U. S. Navy has abandoned its Petroleum No. 4 Reserve program in northern Alaska after eight years' work. The region shows great promise, but cannot be developed by private companies until Congress makes the land available. Little is known of oil possibilities in central and southern Alaska.

30018. KENNEDY, WILLIAM ALEXANDER, 1915-. Growth, maturity, fecundity and mortality in the relatively unexploited whitefish, *Coregonus clupeaformis*, of Great Slave Lake. (Canada. Fisheries Research Board. Journal, Sept. 1953. v. 10, no. 7, p. 413-41, chart, diagr., 5 graphs, 9 tables) 8 refs.

"Ages were determined of 6,571 whitefish for which sizes were recorded. A length-weight relationship, the percentage of both sexes mature at each age, the sex ratio, the proportion of mature females that spawn annually and the relationship between size of fish and number of eggs were determined from smaller samples. Growth rate is difficult to assess . . . but it seems to be slower than in more southerly lakes. Growth appears to be limited to the period June to September inclusive. The total annual mortality rate of 61 percent represents the unexploited condition—four years of commercial fishing . . . produced no obvious change . . . A more

intensive fishery would probably increase sustained yield."—Author's abstract.

Copy seen: CaMAI; DLC.

30019. KENNEDY, WILLIAM ALEXANDER, 1915-. The morphometry of the coregonine fishes of Great Bear Lake, N. W. T. (Canada. Fisheries Research Board. Journal, Apr. 1953. v. 10, no. 2, p. 51-61, 10 tables) 5 refs.

"Morphometric measurements and counts were made on representative samples of 78 lake whitefish *Coregonus clupeaformis*, 77 ciscoes *Leucichthys arctedii*, and 8 round whitefish *Prosopium cylindraceum* from Great Bear Lake, N. W. T. The amount of variability found within this homogeneous population of whitefish casts doubt on the validity of some of the species of whitefish which have been described from this region. The same can be said of the ciscoes."—Author's abstract.

30026. KERSTEN, MILES STOKES, 1913-. Determination of thermal properties of soils for investigation of airfield construction in arctic and sub-arctic regions. St. Paul, Minnesota, Jan. 1948. vi, 90 p. illus. incl. 18 fig., 5 plates, graphs, tables. (Minnesota. University. Institute of Technology. Engineering Experiment Station) 2 refs.

"Variations of the coefficient of thermal conductivity were determined by tests conducted on 14 soils. The coefficient of thermal conductivity increases with temperature above freezing, shows little change below freezing, increases with moisture content when at a constant density, increases with density when at constant moisture content, and is higher for well-graded soils with angular particles than for poorly-graded soils with rounded particles. The specific heats are approximately equal for a variety of soils and decrease with decreasing temperatures. The thermal conductivity results obtained for the soils tested can be used as a basis for thermal conductivity estimates of other soils with similar physical characteristics of mineral composition, gradation and particle surface."—SIPRE. **Copy seen:** DLC.

30027. KERSTEN, MILES STOKES, 1913-. Thermal conductivity of soil. (International Conference on Soil Mechanics and Foundation Engineering. 2d, Rotterdam. Proceedings, 1948. v. 3, p. 12-15, table, graphs). 2 refs.

"More than 600 thermal conductivity tests were made on 14 soils, mostly from arctic regions. Four mean temperatures, 70°, 40°, 25°, and -30° F., were used. The conductivity at 70° F. averaged five percent higher than at 40° F. The tests below freezing showed no marked

variation, particularly at low moisture contents. The conductivity at 25° F. became less than that at 40° F. as the moisture content increased. The thermal conductivity value below freezing became progressively greater than that above freezing with continued increase in moisture. No tests were conducted on soils at moisture contents greater than 36 percent. The rate of increase of conductivity with an increase in density was approximately the same for any moisture content for a given soil. The thermal conductivity of a given material is dependent upon particle size and shape. Thermal conductivity differs appreciably with different mineral constituents of soil such as trap rock, granite, feldspar, and quartz."—SIPRE. **Copy seen:** DA.

30030. KESTNER, OTTO, 1873—. Strahlenmessung nördlich des Polarkreises. (Pflügers Archiv für die gesamte Physiologie, 1927. Bd. 217, Heft 3/4, p. 504-508, fig.) **Title tr.:** Radiation measurements north of the Arctic Circle.

Contains a report on measurements of solar radiation made at Abisko (68°21' N. 18° E.) on Aug. 9-12, 1926, and at Svolvaer (Lofoten Islands) on Aug. 14-18, 1926; a calibrated cadmium cell was used. It was found that at the same altitude of the sun, ultraviolet radiation is stronger north of the Arctic Circle than in the moderate climate.

Copy seen: DLC.

30031. KESTNER, OTTO, 1873—, and W. BORCHARDT. Weitere Strahlenmessungen nördlich des Polarkreises. (Pflügers Archiv für die gesamte Physiologie, 1927. Bd. 218, Heft 3/4, p. 469-74, 2 fig., 3 tables) 9 refs. **Title tr.:** Further radiation measurements north of the Arctic Circle.

Contains a continuation and extension of the senior author's study *Strahlenmessung nördlich des Polarkreises* (q.v.). In addition to the previous station on the Lofoten Islands, measurements were made on a steamer north of Trondheim and at Tromsø. Measurements this time started earlier (in June 1927) in order to explore conditions when the sun is higher in the sky. Earlier findings were confirmed, viz. that north of the Arctic Circle ultraviolet radiation is stronger than in Central Europe at corresponding altitudes of the sun, while the temperature, both in the sun and in the shade, is lower. The possible reasons for the stronger ultraviolet radiation are discussed.

Contains popular account of the outer and inner aspects of Tungus life with many ethnographic details. Their physical appearance and character traits are given: honesty, hospitality, ability to sustain cold and hunger, good orientation and sense of direction are stressed. Separate chapters deal with their occupations: reindeer-breeding, fishing, sea and forest hunting, and dog-breeding. The reindeer is used for riding and as draft animal. Dogs are trained to hunting and the sledge harness. Details are given on hunting methods for seals, bears, wild reindeer, squirrels, and other animals. Making of fish nets, use of boats and sledges, their tents (*urasa*) covered with birch bark or reindeer skins, clothing for men and women, tattooing of the face are described. Details are given on the

preparation of food, storage and drying of fish (making *âukola*), use of berries, etc. Wedding customs, rearing of children, division of work between men and women, songs, games and pastimes are discussed. The nomadic mode of life, and the custom of *nymet* or dividing the hunting take are mentioned. Beliefs in spirits, superstitions and tabus, unbloody and bloody sacrifices (stabbing of reindeer), bear ceremonies and shamanism are described, followed by an account of social organization and election of "princes" among the Tungus. There is throughout no indication to which tribe or locality certain customs are attributed. The author's sources of information are not stated. **Copy seen:** DLC; NN.

30047. KHYMYZNIKOV, PAVEL KON-STANTINOVICH, 1896- . Vechnaiã merzlota. (Akademiia nauk SSSR. Sovet po izucheniiu proizvoditel'nykh sil SSSR. Trudy. Seriiã fakutskaiã, 1934. No. 19, p. 76-83, illus., tables) **Title tr.:** Permafrost.

"The basin of the Yana River is in a permafrost region. Soil temperature measurements indicated that summer thawing does not extend beyond 0.4 m. and the upper soil layers register temperatures above 0° C. for a maximum of two months. Soil thawed at a rate of about 1 cm./day in June. The basic thawing factors are relief, microrelief, and soil composition particularly that of the upper layers. The thawing rate is higher under river and sea bottoms where the maximum depth of permafrost

is estimated at about 1 m. Soil samples were taken in autumn when the surface of the ground was frozen. The interspersed thawed layers of these samples had an increased moisture content."—SIPRE.

30049. Kholmianskii, I. Ā. Petrografiã Bol'shogo Liãkhovskogo ostrova v gruppe Novosibirskikh ostrovov. (Akademiia nauk SSSR. Petrograficheskii institut. Trudy, 1936. vyp. 9, p. 105-147, illus. map) 26 refs. **Title tr.:** The petrography of Bol'shoy Lyakhovskiy Island in the New Siberian Islands group.

Contains a study of the rocks of this island (73°35' N. 142° E.) based chiefly on collections made by M. Ermolaev during the Expedition of the Academy of Sciences U.S.S.R. in 1928-30. A general geological description is given of the New Siberian Islands, and petrographic description of the following igneous and metamorphic rocks: granite, porphyrite, variolite, amphibolite, hornstone and sandstone, arranged by the regions. Mineralogical and chemical analyses are included (table 1-20). Summary in English.

Copy seen: MH-Z.

30050. KHOMICH, L. Nenetskaia zhenshchina v sotsialisticheskom stroitel'stve. (Leningrad. Universitet. Uchenye zapiski, 1953, no. 157. Seriiã fakul'teta narodov Severa, vyp. 2. Āzyk i istoriã narodnostei Kralnego Severa SSSR, p. 134-50) **Title tr.:** The

Nenets woman in the building up of socialism.

Contains description and praise of the Soviet achievements in improving conditions for women in the North. The betterment is exemplified in the life of Samoyed (Nenets) women: their changed legal position, changes due to transition from their former nomadic way of life to a settled one in reindeer-breeding kolkhozes, protection of health, opportunity for education and professional training and economic aid. The All-Union and local conferences of women of the North are mentioned; the role of Nenets women in the economy of their area during the war is stressed. Soviet national policy in the North is lauded in comparison with that of the former régime.

30053. KIELHORN, WILLIAM V. The biology of the surface zone zooplankton of a boreo-arctic Atlantic Ocean area. (Canada. Fisheries Research Board. Journal, Nov. 1952. v. 9, no. 5, p. 223-64, 2 charts, 11 graphs, 4 tables) 82 refs.

"A modification of a thesis prepared at the Narragansett Marine Laboratory, University of Rhode Island, and submitted in partial fulfilment of the requirements for the degree of Master of Science in Biological Oceanography.

"This paper originated as a technical report under a contract with the Office of Naval Research, and is designated as Contribution No. 3, of the Narragansett Marine Laboratory."

Zooplankton samples were taken at weekly intervals for a year in the central Labrador Sea (56°30' N. 51°00' W.) to determine composition, seasonal progression, fluctuations, etc. Although 61 species are represented, the zooplankton is composed mainly of only six, with large numbers of individuals. The main augmentation period is in late summer. The character of the population is neither true arctic nor true boreal. Biological evidence indicates an influx of boreal-subtropical surface waters into the area in winter. Phytoplankton and detritus, not zooplankton, were found to affect water clarity. No correlation was found between bioluminescence and species or plankton groups.

30054. KIELHORN, WILLIAM V., and C. A. PALMER, Jr. Skijump operations. (Weatherwise, Aug. 1952. v. 5, no. 4, p. 83-84, illus., sketch map)

Contains a brief popular summary of Operation Skijump II, an expedition sponsored by U. S. Office of Naval Research in Feb.-Mar. 1952 to obtain geophysical data on the Arctic Basin. A DC-3 was outfitted as a laboratory and landed at five different points on

the arctic icecap. Holes were cut in the ice and oceanographic instruments lowered to study temperature, salinity, and currents. Some meteorological work was done. Two Lockheed Neptunes were used as flying tankers to refuel the DC-3, and to rescue personnel when it crashed at Station 5, Mar. 30. Sketch map shows location of the stations and of ice island T-3 at that time.

Copy seen: CaMAI.

KILLEEN, PEMBERTON LEWIS, 1908-, see also White, M. G., and P. L. Killen. Reconnaissance for radioactive deposits, Yukon-Kuskokwim highlands, Alaska. 1953. No. 32902.

30055. KILLIAN, HANS, 1892-. Die Bedeutung der Nebenniere bei Kälteschäden. (Zentralblatt für Chirurgie, Jan. 9, 1943. Jahrg. 70, Nr. 2, p. 50-54) *Title tr.*: The importance of the adrenal gland in cold injuries.

Contains an account of the three successive phases in the physiology and pathology of hypothermia and frostbite: the circulatory, the anoxic and the necrotic phase; the role and function of the adrenal cortex in these three stages; similarities between heat injuries and cold injuries.

Copy seen: DSG.

30056. KILLIAN, HANS, 1892-, and others. Die Fieberbehandlung von Kälteschäden, zugleich ein Beitrag über die Kreislaufwirkungen des künstlichen Fiebers. (Deutsche Gesundheitswesen, Mar.-Apr. 1946. Jahrg. 1, Heft 6, p. 129-32; Heft 7, p. 176-83; Heft 8, p. 206-209, 14 diags.) 37 refs. *Other authors:* H. Voigt, R. Hemmer, and E. Koch. *Title tr.*: Fever therapy of cold injuries, a contribution on the circulatory effect of artificial fever.

Contains a study on the use of pyrogenous substances ("Pyrifer", a sterile suspension of *B. coli*) in the therapy of cold injuries, and an extensive investigation on the physiological effects of artificial fever on the circulatory system. The therapy has shown most encouraging results. It is concluded that the increase

in the volume of circulating blood during fever is caused by a squeezing out of blood depots, thus bringing into circulation blood richer in hemoglobin and cell content. The increased peripheral circulation seems very useful in its therapeutic effect, and so is the apparent lack of excessive strain on the heart. Summaries in Russian and English.

Copy seen: DSG.

30057. KILLIAN, HANS, 1892-. Kälteschäden. (Deutsche Gesundheitswesen, 1946. Jahrg. 1, Heft 3, p. 33-39) *Title tr.*: Cold injuries.

Review of recent advances in the knowledge and therapy of cold injuries, in two parts: (1) General hypothermia, its phases, physiology and pathology; defense mechanism against it; therapy: quick rewarming, glucose administration, medication. (2) Local frostbite, its causes, phases, four degrees; physiology and pathology; therapy: artificial fever, sympathetic intervention, heparin, etc.

Copy seen: DSG.

30058. KILLIAN, HANS, 1892-. Kälteschäden, Wiedererwärmungsschäden. (Zentralblatt für Chirurgie, 1952. Bd. 77, Heft 3, p. 105-112, 2 illus.) *Title tr.*: Cold injuries, rewarming injuries.

Contains an account based on author's work and on world literature. The difference between general hypothermia and local cold injuries (frostbite, trench foot, etc.) is stressed. The injuries are found to be the result of oxygen deficiency during the rewarming period, cold in itself producing no such effects. Consequently the author rejects the rapid warming therapy. Instead he demands (1) keeping the body surface cold (6° to 8° C.); (2) rewarming the body's core; (3) vasodilatation; and (4) slow rewarming in the direction from the core outward. Other means, as hormone-therapy; antihistamines, etc., are also discussed.

30060. KILLIAN, HANS, 1892- . Das Wesen der Kälteschäden, (Schweizerische medizinische Wochenschrift, Dec. 31, 1949. Jahrg. 79, Nr. 52, p. 1262-66) about 65 refs. **Title tr.:** The nature of cold injuries.

Contains text of a lecture based on author's extensive experience and other sources. General hypothermia, its phases, and the physiological changes it causes in the body systems, in their function and chemistry, are discussed first. It is concluded that death in these cases is not due to cell injury, but due to failure of some vital organ(s) occurring at a body temperature of 27° C. Quick rewarming is the therapy recommended. Frostbite (local hypothermia), its fundamental difference from the former, its physiology, pathology and therapy are dealt with next. Some general conclusions close the article.

KLEEMAN, CHARLES E., *see* Quinn M., and others. Effect acute cold exposure. 1953. No. 31509.

30084. KLEIN, GEORGE J., and others. Method of measuring the significant characteristics of a snow-cover. Ottawa, Nov. 1950. 22, 7, 6, 2, 10, 10 p. illus., diagrs., tables. (National Research Council of Canada. Associate Committee on Soil and Snow Mechanics. Technical memorandum no. 18) *Other authors:* D. C. Pearce, and L. W. Gold.

Contains a consolidation and revision of Division of Mechanical Engineers Reports MM-192 and MM-202 on the Canadian Snow Survey which began in winter 1946 (Arctic Bibliography, No. 8806 and 8808). The report deals with the collection of snow-cover data at a

number of observation points in Canada, the purpose of the Survey being "to describe any particular snow-cover by means of measurements (or photographs) in order that the problems associated with it—such as snow performance of vehicles, skis, snow-clearance equipment, etc.—can be fully appreciated by the designer or user of such equipment." The methods and instruments used are described in detail. General information on snow, hoar, and rime formation and composition is given, and a snow nomenclature and "Tentative Snow Classification" with code are presented. Diagrams and illus. show instruments used. See also D. C. Pearce and L. W. Gold, *Canadian Snow Survey, 1947-1950, Arctic Bibliography*, No. 25010.

30098. KLINGSTEDT, F. W. Minnen från ett besök på Fiskarhalvön. (Terra, 1919. v. 31, p. 93-106) **Title tr.:** Recollections of a visit on Fisherman [Rybachiy] Peninsula.

A geologist describes his visit to Rybachiy Peninsula (69°40' N. 32°40' E. on Kola Peninsula) in the summer of 1909. The peninsula's tundras were still covered with snow on June 25, the date of the author's arrival. The geological structure of the narrow is-

thmus from the mainland, of Sredniy, the middle part of the peninsula, and of Rybachiy, its northern part, is discussed. The sparse vegetation and the bird life of the region are described. The chief towns are Vayda-Guba, TSyp-Navolok and Pummanki, none of which is a "port of call", all traffic with the outside world taking place by way of Pechenga (Petsamo). The largely Finnish population supports itself by fishing.

30104. KNOLL-GREILING, URSULA. Die sozial-psychologische Funktion des Schamanen. (In: Beiträge zur Gesellschafts- und Völkerwissenschaft, Prof. R. Thurnwald gewidmet. Ilse Tönnies, ed. Berlin, 1950, p. 102-124) 80 refs. **Title tr.:** The social-psychological functions of the shaman.

Contains a study in definition of shamanism and of relations between the shaman and his community. The shaman must have an inner vocation for his duty, he must also learn from an experienced

shaman the art of shamanizing. The community may accept or reject him. Often the elders choose from several candidates one who is considered the most fitting for shaman's duty. He must show his ability to attain ecstasy. There are good and bad, great and little shamans, and their social reputations differ. The great shaman is an important person in the community, he is not considered a mentally ill man; on the contrary, he performs psycho-therapeutic functions, protecting the whole community from mental disturbances which otherwise can take sometimes an epidemic character (Massenverrücktheit). Based on literature with many references to Tungus, Yakuts, and Paleo-Siberian peoples. The author is obviously influenced by Shirokogorov's ideas. **Copy seen:** DLC.

30108. KOCH, LAUGE, 1892- . Central-Ostgrønland. (Grønland, 1952? hefte 1, p. 20-27, illus. incl. map) **Title tr.:** Central East Greenland.

Contains a geographical description of the coastal region 70° to 77° N. lat. which includes the Scoresbysund District, Ella Island, Clavering Island and the Hochstetter District. This region termed by the author Central East Greenland, has some 86,000 sq. km. ice-free land. The topography, zoology, botany, geology, climatology and archeology are discussed briefly. Exploration of the area is summarized, and successive expeditions which wintered in the region are noted from the German North Polar Expedition led by K. Koldewey 1869-70, to the author's geological expedition 1926. Central East Greenland he states, is on the threshold of new developments, the lead mining at Mesters Vog is one.

Copy seen: DLC.

30109. KOCH, LAUGE, 1892- . Report on the expeditions to central East Greenland 1926-39 conducted by Lauge Koch, Pt. 1. Notes on some topographical and geological maps of East Greenland. København, C. A. Reitzel, 1950. 11 p. 7 fold. plates (maps). (Meddelelser om Grønland. Bd. 143, nr. 1) 12 refs.

Contains brief text accompanying two.

topographic and five geologic maps, preliminary to detailed accounts to be published. Topographic maps cover in general the area east of 40° W. and north of 65° N. Geological maps cover east of 24° W. and between 71°-75° N. High altitudes are noted in the text, and geologic history is briefly reviewed with reference to theories of De Geer, Koch, and Wegener. **Copy seen:** DGS.

Title tr.: Were Eskimos the first settlers of the far North?

Contains speculation on an extinct tribe, called Tunit or Tornit, often mentioned in Eskimo traditions: they are said to have inhabited Canada before the coming of the Eskimos; they lived in houses built not of snow but of stones and whale bones, and were a large and strong people. Archeological excavations by Therkel Mathiasen indicate that the Tunit were the Thule Eskimos, the last of whom died out on Southampton Island in 1902-1903. See Mathiasen, *Arctic Bibliography*, No. 11062, and E. W. Weyer, No. 19363 for full discussion of the Tunit legends. **Copy seen:** DLC.

30114. KOENIG, LAWRENCE S. Ice islands in the Arctic Ocean. (In: Alaskan Science Conference . . . 1951. Proceedings, pub, 1953. p. 263-70, map)

Contains a description of the ice islands T-1, T-2, and T-3 as observed from the air on routine and special search flights between 1946 and 1951. The original location, characteristic features, and rate and direction of movement of the islands are discussed, together with the question of their origin on the north coast of Ellesmere Island. Comments are made on low-level observations. This paper recapitulates and brings up to date that of J. O. Fletcher (in *Arctic Bibliography*, No. 20177).

30115. KOEPPE, CLARENCE EUGENE, 1891- . The Canadian climate. Bloomington, Ill., McKnight & McKnight, 1931. 280 p. illus., text maps, graphs, tables.

The first section contains a general discussion of climatic factors (temperature, wind, precipitation, etc.) and the physical features of Canada which influence climate, supplemented by maps and tables showing data for a number of arctic stations. In the regional treatment of climate, Yukon Territory (p. 92-98), Mackenzie valley (p. 100-114), Hudson Bay region (p. 139-51), Labrador (p. 189-99), and arctic prairies and archipelago (p. 200-225) are considered. Temperature, precipitation, and wind

frequency data are appended for 14 arctic stations. *Copy seen:* DLC.

30116. KOFFSKY, ROBERT von. Ueber ethnologische Forschungen unter den Samoeden nebst einigen Beobachtungen. (Archiv für Anthropologie, 1894. Bd. 22, p. 96-105) 4 refs. *Title tr.:* On the ethnological investigations among the Samoyeds with some personal observations.

Contains an account of Samoyed life in its various aspects on the basis of the work of J. G. Georgi (q. v.) and Corneille le Brun, as well as the author's own observations in 1882-83 when he was an examining judge in Mezen' and frequently encountered these people. He gives detailed descriptions of the Samoyeds' tents, their fur clothing and foot-gear (*dasha* coat, *malitza* shirt, and *sawick* hood), the richly decorated women's garb among the Pechora Samoyeds, the construction and use of skis, reindeer harness and sledge, vessels of birch bark (*tujasi*) and their use in bleeding reindeer, the cradle, property marks, etc. Economic life is outlined: reindeer herding and the use of shepherd dogs, fishing and hunting. Customs are discussed, e. g. the naming of children, and giving a few reindeer to the new-born boy, the status of women as slaves and heavy workers, forcing a confession of infidelity from a woman giving difficult birth, the "unclean woman" and various tabus connected therewith, marriage and funeral practices. Data are given on physical and psychological characteristics; social organization (tribes and chieftains) is noted as well as contact with Russians, health and hygiene, etc.

30119. KOHN, ALBIN. Der Jakuter Volksstamm in Sibirien. (Globus, 1874. Bd. 25, p. 215-17, 235-36, 246-48, 2 illus.) *Title tr.:* The Yakut tribe in Siberia.

From his experiences while traveling from Ust' Kut to Irkutsk in Dec. 1866, author's impressions of the Yakuts are given, somewhat slanted by his considering all primitive peoples as barbarians, only slightly higher than wild animals. He presents some interesting notes however, on the climate of the region, the Yakut family, their clothing and housing, hunting technique, religious beliefs, ivory carvings, Christianization, etc.

Copy seen: DLC.

30120. KOHN, ALBIN. Die Tungusen in Sibirien. (Globus, 1874. Bd. 25, p. 119-21, 136-38, 2 illus.) *Title tr.:* The Tungus in Siberia.

Contains author's impressions of the Tungus from having met some of them at Verkholensk on the Lena River: their physical appearance, the country where they live, their dwellings and clothing, the animals which they hunt, their birch-bark boats, paying of tribute, use of dog or reindeer sledges, their religion and conversion to Christianity. The exploitation of Tungus by the Russians, and the wealth of the country in gold ore and mammoth ivory are noted. The low fertility of Tungus women because of marriage between close relatives is mentioned, also other observations. The author considers the Tungus an uncivilized and dying-out people, stressing,

however, that the Russians had contributed greatly to their deterioration.

30122. KOLARZ, WALTER. Russia and her colonies, London, G. Philip, 1952. Also pub. New York, Frederick A. Praeger, 1952. xiv, 335 p. 5 maps.

Soviet policy toward non-Russian nationalities of the U.S.S.R., excepting those of the Far East is described and appraised on the basis of Soviet sources. Among others, the peoples of the "inner" North are dealt with (p. 59-66) as to administrative structure, economic sovietization, nationalism, cultural assimilation and eclipse of the native in that area. The native component in its population is estimated to have decreased to below 20 percent. The disappearance of Komi (Zyryan) nationalism in the exploitation of the oil and coal resources of the Pechora basin and penetration of a 700-mile railway to Vorkuta is sketched (p. 55-58). Russian colonization of Kola Peninsula in the Soviet period is outlined (p. 91-96). Transformation of the traditional life of the Russian Lapps in the development of the Saami National District in Kola Peninsula is noted, and the importance of this small group (approx. 2,000) for Soviet policy toward Scandinavian countries with much larger Lapp populations stressed.

30123. KOLESNIKOV, A. G. K teorii narastaniia l'da na poverkhnosti moria.

(U.S.S.R. Glavnoe upravlenie gidrometeorologicheskoi sluzhby. Trudy nauchno-issledovatel'skikh uchrezhdenii, ser. V, 1946, vyp. 12, p. 109-147, diagrs. tables) 18 refs. **Title tr.:** Contribution to the theory of growth of ice on the sea surface.

"A general differential equation for the rate of ice growth and considering the isothermic conditions of ice expansion is introduced. Another formula for ice growth considers ice thickness in shallow waters of a sea as a function of the sum of average daily temperatures, the depth and density of the snow cover, the salinity of ice and wind velocities. Comparison of calculated and observed [from the Yana and Kolyma Rivers] values showed good agreement for exposed and snow covered ice. A corrective factor must be introduced into the formula when calculating ice thickness for deep seas with a strong vertical flow of water." SIPRE. Previously listed as No. 9030.

Trudy, 1948, t. 2, p. 201-210) 5 refs. **Title tr.:** Seasonal frozen ground; frozen ground defined in relation to stages of its formation.

"A distinction is made between permanent frost and seasonal frost. Frost formation occurs in four phases, each associated with changes in the physical structure of the ground. A temperature drop to and below 0° C. is the initial phase during which the mechanical properties of the ground remain unchanged. The appearance and growth of ice crystals and the subsequent increase in strength and initial ground expansion constitute the second phase. The third phase is recognized by peak expansion of the ground due to ice crystal growth. Ice wedge formation and subsequent cracking of the frozen ground marks the final phase of frost formation. The depth of winter freezing of European and parts of Siberian U.S.S.R. and Kazakhstan soils is discussed (p. 206-207) and a formula for its calculation is introduced. The relationships between types of soils, plant cover and depth of freezing are reviewed."—SIPRE. **Copy seen:** DLC.

30127. KOLOSOV, D. M. O nalednykh iavleniyakh kak geomorfologicheskoy protsessu. (Problemy fizicheskoy geografii, 1938. no. 6, p. 125-34, 2 fig.) 13 refs. **Title tr.:** On the phenomenon of naled' as a geomorphologic process.

Includes a discussion of the origin and geomorphologic effects of naled' in the mountain valleys of eastern Siberia. In favorable localities, the alluvium of the stream bottoms and the waters of the streams freeze to such an extent that a portion of the stream is forced to flow outside of the regular channel, and in freezing forms a thick mass of ice across the bottom of the valley which sometimes lasts throughout the year. The author considers this an embryonic type of modern glaciation. In summer the ice melts slowly. Daily at its borders occur abrupt temperature changes favorable to the rapid mechanical disintegration of bedrock wall and the crumbling of frozen alluvium. The resulting talus is removed

by the stream. The valley walls retreat, the valley bottom widens, and the ice of the following winter covers the widened flat. In the autumn, when the ice has disappeared, the valley bottom appears as a vast gravel plain in which the river flows in many small interlacing channels. When the valley widening is completed in a given area, the locale of the process is shifted up or down stream. Summary in French.

chory. (Lesnaia promyshlennost', Mar. 1953. t. 13, no. 3, p. 6-9, illus.) **Title tr:** Tasks of reconstruction in timber floating in the Pechora basin.

The forests of the Pechora River basin contain several hundred million cu. m. timber, but due to scarcity of population and lack of transportation only 0.1-0.2 percent of available timber is utilized. Floating is the easiest way of transporting the timber. The floating capacity of Pechora River and (briefly) its main tributaries is characterized, the defects of the organization of timber floating attributed chiefly to lack of interest on the part of the Ministry for River Fleet. Various measures are suggested for improving the floating capacity of the rivers: by deepening of the bed at shoals and shallow places, construction of timber ports and harbors, etc. Advanced methods of rafting and floating are recommended. **Copy seen:** DLC.

30144. KOPPERS, WILHELM, 1886- Der Hund in der Mythologie der zirkumpazifischen Völker; ein Beitrag zur Frage der altneuweltlichen Kulturbeziehungen. (Wiener Beiträge zur Kulturgeschichte und Linguistik, 1930. Bd. 1, p. 359-99) **Title tr.:** The dog in the mythology of circum-Pacific peoples; contribution to the question of cultural relations between the Old and New World.

Contains an account based on literature, of the myth of the dog mated with a human whose progeny was a certain tribe, a myth popular among both the Asiatic

and North American Eskimos, the Chukchis, the Indians of North America and others (the Ainu, northern Tungus, and peoples of southeastern Asia). The dog is considered as guardian of the nether world among the Eskimos, Chukchis, Koryaks, Kamchadals, and Yukaghirs. Among the Finno-Ugric reindeer breeders, who pay it no respect, the dog is used as herder; it is not so used by the Chukchis, Koryaks, Tungus and Yakuts. The author is inclined to believe that the dog myth came to North America from the southeastern Asia. **Copy seen:** DLC.

30145. KOPPERS, WILHELM, 1886- Konnten Jägersvölker Tierzüchter werden? Ein Beitrag zur Urgeschichte der Domestikation. (Biologia generalis, 1932. Bd. 8, p. 179-86) 18 refs. **Title tr.:** Is it possible for hunters to become animal breeders? A contribution to the prehistory of domestication.

Contains a brief presentation of the attitude of the cultural-historical school in ethnology, to the problem of the origin of animal husbandry. Not religious-magical considerations, but practical and economic reasons led to animal breeding; namely, and primarily, to get meat and hides; the milking and riding of the animals came later. The reindeer and horse were the first (after the dog) to be domesticated, and a hunter, not an agriculturist, was the first to tame wild animals. This taming occurred in the old arctic culture (altarktischer Urkultur) of some subarctic region of Central Asia, and the first animal breeders were Samoyedic and Turco-Tataric peoples. The hunters avoid killing animals unnecessarily, hence there were no psychological obstacles to prevent hunters' kindly treatment of the animals, which were lured to man's dwelling places by plague of mosquitoes and need of salt. Several quotations in reference to Samoyeds, Tungus, Yakuts, and Montagnais Indians among other peoples are included.

30173. KOVĪAZIN, N. M. Olenevodstvo v Ėvenkiskom natsional'nom okrug. (In: KovĪazin, N. M., and others. Ocherki po promyslovomu khoz. 1936, p. 3-38, tables) **Title tr.:** Reindeer breeding in the Ėvenki National District.

Contains a genera characterization of the Evenki National District in Krasnoyarsk District of western Siberia (60°-69° N. 58°-77° E.) where the author sojourned during 1931-35. The condition of the reindeer herds, sources of their feed, and their use for transportation are outlined. Social and economic conditions of the Tungus (Evenki) are discussed in relation to the reindeer breeding. The latter's deterioration is analyzed and measures suggested for the revitalization of the industry. The hunting of fur-bearers increased after mass slaughter of reindeer herds following collectivization. Of 4,562 inhabitants in 1933-34, hunting was the occupation of 1,654; fishing, however, remains an unimportant industry. **Copy seen:** DLC; MH-Z.

Contains a systematic index to the species of lepidopterous fam. Orgyidae; followed in the general part (p. 9-213) by chapters on (1) external body structure of imago; (2) external morphology of pre-imaginal stages; (3) characteristics of the anatomical structure; (4) biology; (5) classification and phylogeny; (6) ecology (p. 78-123); (7) geographic distribution (p. 124-72); (8) economic importance (with a list of 82 species injurious to trees, fruit-trees, shrubs, industrial plants, vegetables and cultivated grasses); bibliography (375 items). In the special part, (p. 214-565) are tables for the determination of subfamilies, genera and species (imago and larva), and descriptions of 64 species and two forms of subfam. Orgyinae (three described as new) and 75 of subfam. Acronictinae (four are new) with synonyms, references and data on geographic distribution, biology and ecology; some species native to northern regions of European and Asiatic U.S.S.R. and Scandinavia are included. Indexes of Orgyidae (Latin names), of parasites of Orgyidae, are appended.

(*In*: Fauna SSSR. Insecta Lepidoptera, t. 13, vyp. 3. (Nov. ser. no. 15)) 125 refs. **Title tr.:** Lepidopterous insects. Owl-moths (Fam. Noctuidae, subfam. Agrotinae).

Contains a systematic index to the species of lepidopterous subfam. Agrotinae, (p. vii-xvi); followed by an introduction on the morphological structure (p. 1-28), biology (p. 28-63) and (p. 63-78) fluctuation of abundance and conditions of the injurious activity of these moths, the larvae (cutworms) being very injurious to many vegetables and ornamental plants; geographic distribution, (p. 78-108), and a short survey of classification of this subfamily (p. 108-113). A bibliography (125 items), in five sections is included in the introduction. In the special part (p. 115-601) are keys to the tribes, genera, subgenera and species; descriptions of 413 species, including 11 new to science, with synonyms, references, critical notes and data on total distribution. Includes 44 species inhabiting the tundra zone (see sketch maps). Index of Latin names is appended (p. 653-74). Summary in English, p. 602-651.

1951. 198 p., 111 illus., map. (Moskovskoe obshchestvo ispytatelei prirody. Seriya Sredi prirody, no. 40) 62 refs. **Title tr.:** Across tundras, forests, steppes and deserts; sketches of the life of the plant world. Second edition, edited with additions by L. V. Kudrjashev. First pub. in 1937, and republished here in a posthumous edition.

Popular book on plant biology, with three chapters dealing with the North. The tundra zone is described (chap. 3, p. 19-36), its climate, permafrost, shrubs and lichens (lĕgel), the arctic desert, and peculiar features of the growth and life of tundra plants. The taiga (chap. 4, p. 37-70), its most important trees (pine, spruce, larch), their biology, ecology and root systems, characteristic shrubs and herbs are outlined and taiga resources evaluated. Chap. 5 (p. 71-89) offers data on peat bogs, sphagnum mosses, swamping of the forest, formation of peat, its economic importance, and its role as an indicator of geological age and former vegetation.

Colymbiformes, Procellariiformes, by E. V. Kozlova. Pelecaniformes, Ciconiiformes, Phoenicopteriformes, by A. I. Tugarinov.

Contains characterization and systematic account by Kozlova (p. 11-125) of diving birds of the orders Colymbiformes and Procellariiformes. Twenty species, 20 varieties and forms, almost all native to the northern rivers, lakes, and seacoasts of the U.S.S.R., are described, with synonyms, dimensions, data on geographic distribution and life habit. Aquatic birds of the orders Pelecaniformes, Ciconiiformes, and Phoenicopteriformes are similarly treated by Tugarinov (p. 125-299), 33 species, 25 varieties and forms, many native to the North, being described with synonyms, dimensions, distributional and ecological data.

The work is extensively illustrated (44, 63 fig.), with sketches, diagrams, photographs, etc., of specimens and zoogeographic maps. Bibliographies are given by each author (29, 22 items). Tables for determination of families, genera and species precede (p. 7-10) the text, index of scientific names is appended. Summary in English, p. 300-313. **Copy seen:** DLC; MH-Z.

30184. KRABBE, THOMAS NEERGAARD, 1861-1936. Greenland, its nature, inhabitants, and history; translated from the Danish by Annie I. Fausbøll. Copenhagen, Levin & Munksgaard, 1930. xvi, 129 p. incl. 50 illus. (ports.), 170 plates, fold. map. Text in Danish and English in parallel col. throughout.

Contains a comprehensive and extensively illustrated survey of Greenland, based on the author's experience there during 1889-1909, eleven years as resident practitioner, the remainder as medical officer traveling throughout the country to investigate health conditions for the Danish government. Introduction (p. 3-129) contains chapters on area and distances, the inland ice, build of

the coast, ice conditions in and about Greenland, climate, geology, vegetation, animal life, aboriginal culture of the Greenlanders, amount and distribution of the population in 1886 and 1926 (table on p. 37), industries, trade & communications, administration, exclusion of foreigners, justice, church and school, health, language and literature, scientific stations, and the history of Greenland from the original Eskimo settlement (via Ellesmere) to modern times. The culture of Eskimos is outlined in some detail (p. 29-36): winter dwellings and summer tents, their interior equipment, the making of fire, clothing, means of communication (dog sledge, umiak and kayak), fishing and hunting techniques and tools, social conditions, religion and the activity of the magician (*angekok*), folk poetry and music of the drum. The chapter on health (p. 72-80) gives information on early physicians, medical officers; midwives, hospitals, etc.; epidemics and diseases, especially tuberculosis; mental diseases; hysterical fits, "kayak vertigo", etc., are noted.

30185. KRAHMER, GUSTAV, 1839-1905. Sibirien und die grosse sibirische Eisenbahn. 2. verb. und vollständig umgearb. Aufl. Leipzig, Zuckerschwert, 1900. 286 p., 2 fold. maps. (Russland in Asien, Bd. 3) **Title tr.:** Siberia and the Great Siberian Railway. Second corrected and completely revised edition. First pub. in 1897 (103 p., fold. map).

Russian conquest of Siberia is outlined. The physical features, climate, plant and animal life are characterized. The population and settlement of the area are treated in some detail (p. 42-85), and the principal economic activities sketched. Mineral resources and their utilization, industry, trade and transportation are summarized. Then follows (p. 170-284) account of the Trans-Siberian Railway, the greater part of which, under construction since 1891, was completed. Aspects of northern Siberia are treated incidentally in the historical, geographic, population and economic sections of the book.

30186. KRAMÁR, JENŐ. Stress and capillary resistance. (American journal of physiology, Oct. 1953. v. 175, no. 1, p. 69-74, illus., tables) 11 refs.

Exposure to cold (or forced exercise) elicited a typical response in the capillary

resistance of the rat, characterized by the following phases: (1) initial rise, (2) critical drop, (3) abnormally low resistance, and (4) return to normal. The phenomena are believed to represent a further and hitherto unknown manifestation of the nonspecific stress syndrome. Factors responsible for variations in details of the capillary reaction, and the probable mechanism of it, are discussed.

30187. KRAMER, DAVID W., and P. K. PERILSTEIN. Case report of cold sensitivity with cold hemagglutinins. (Angiology, Aug. 1951. v. 2, no. 4, p. 283-92, 2 illus., table) 8 refs.

Contains study of the disease in a woman, aged 40, white, married, including case report; physical examination; circulatory, laboratory and serological tests; also, studies under various conditions of exposure and therapy.

Copy seen: DSG.

30188. KRAMER, KURT, and H. REICHEL. Die Grenzen der chemischen Wärmeregulation. (Klinische Wochenschrift, June 1944. Jahrg. 23, Heft 21-26, p. 192-98, 8 fig., 3 tables) 16 refs. **Title tr.:** The limits of chemical heat regulation.

Contains an account of experiments with narcotized dogs, chilled in water of a temperature of 0°-3° C. Oxygen consumption, rectal and intracardial temperatures, blood pressure, etc., were registered. Four phases were observed: (1) shivering; (2) maximal shivering and drop of body temperature to 30° C.; (3) failure of thermoregulation and exitus; (4) further drop in body temperature down to 15° C. in the surviving animals, and death. Experiments with quick rewarming are also reported and some limitations of this method discussed. The effects of the drug Pervitin in advanced hypothermia was also tried, and a revival of a dog five minutes after cessation of heartbeat is reported.

30189. KRAMER, KURT, and W. SCHULZE. Die Kälte-dilatation der Hautgefäße. (Pflügers Archiv für die gesamte Physiologie, 1948. Bd. 250, Heft 2, p. 141-70, 16 illus., table) 15 refs. **Title tr.:** Cold dilatation of the skin vessels.

Contains a study of the vasomotor mechanism in the skin of the finger at low temperature, with continuous re-

cordings of O₂ content, volume, velocity and temperature of the blood. Changes in vasoconstriction and dilatation as affected by temperature, type of vessels affected, diurnal and seasonal variations in the local reaction of the blood vessels, oxygen saturation of blood in relation to temperature, blood volume as related to reactive status of vessels, were studied. Also the effects of the general condition of the body (heating, cooling, heavy work, etc.) on the local reactivity of the skin to cold, as well as corresponding effects of hot drinks and alcohol.

30190. KRAMER, KURT, and W. SCHULZE. Die lokale Auskühlung. (Klinische Wochenschrift, June 1944. Jahrg. 23, Heft 21-26, p. 201-204, 5 fig., 2 tables) 6 refs. **Title tr.:** Local hypothermia.

Contains an account of experiments on local cooling in man and the relation of pain sensation to the vascular reactions evoked by the cold. Pain sensation leads to enlargement of the blood vessels which is as a rule proportional to the duration and strength of pain. Novocain abolishes pain sensitivity but also limits the reactivity of the blood vessels. When the organism is unable, through vascular dilatation, to prevent cold injury, freezing takes place after over-cooling of the exposed area has set in.

30192. KRANCK, ERNST HÅKAN, 1898-. Bedrock geology of the seaboard of Labrador between Domino Run and Hopedale, Newfoundland. Ottawa, Queen's Printer, 1953. 45 p. 5 plates, diagr., 3 maps (1 fold.), 4 tables. (Canada. Geological Survey. Bulletin 26) 30 refs.

Contains a study of bedrock geology and petrology of a strip of coast on both sides of Hamilton Inlet, totaling 200 mi. and including the shores of Double Mer and Lake Melville. Seven sections from south to north are discussed in turn; in each section the rocks—Precambrian granite, gneiss, syenite, basic intrusives, and sedimentary rocks—are described. Physical geography, structure, metamorphism, and economic geology are briefly summarized. **Copy seen:** DGS.

30193. KRANCK, ERNST HÅKAN, 1898-. Quelques problèmes géomorphologiques du Canada et de la Fennoscandie. (Société neuchâteloise de Géographie. Bulletin, 1948. v. 54, no. 2, (n. s. no. 7), p. 1-11, illus., 2 sketch maps) 18 refs. **Title tr.:** Some geomorphological problems of Canada and Fennoscandia.

Contains a review of the strikingly similar physiographic features presented by the Canadian and Fennoscandian shields: (1) the vast low plateau; (2) the central depressions: Hudson Bay, Gulf of Bothnia; and (3) uplifted sections on Atlantic coasts: mountains of Labrador and Baffin Island and the Scandinavian chain. General geology and physiography and the role played by structure in the present landscape are summarized. Special examples of similar small physiographic features are cited.

30198. KRASOCHKIN, V. T. *Tomaty na Severe.* (Nauka i zhizn', Apr. 1952. t. 19, no. 4, p. 9-10, illus.) **Title tr.:** Tomatoes in the North.

Since 1940, the author together with D. D. Berezhnev, have been working systematically on increasing the frost resistance of tomatoes. This work, sponsored by All-Union Institute for Plant Breeding (VIR), resulted in the development of two new strains, which survive at -2°C . and are suitable for cultivation in the North. It continues and the investigators hope for further successes. The failure of American horticulturists to achieve a frost-resistant tomato, is briefly mentioned. **Copy seen:** DLC.

30199. KRASOVSKIĬ, M. *Russkie v ĭakutskoi oblasti v XVII v. (Kazan'. Universitet. Obshchestvo arkeologii, istorii i ětografii. Izvestiia, 1895. t. 12, vyp. 2, p. 143-76)* **Title tr.:** The Russians in the province of Yakutia in 17th century.

Contains notes on geography of the region, its numerous rivers, climate and vegetation, and aboriginal population: Tungus and Yukaghirs in the North between the Rivers Indigirka and Kolyma, and Yakuts and Tungus on the Olenek, Lena and their tributaries; Yakut traditions on their origin; the Russian conquest of the region; introduction of Christianity among the natives. **Copy seen:** DLC; InU.

30200. KRAUSE, LOUIS A. M., and others. The incidence of palpable pulsations in convalescent trench foot; an analysis of 500 patients at an Army general hospital. (American journal of the medical sciences, June 1946. v. 211, p. 729-32, fig., 2 tables) 9 refs. *Other authors:* J. J. Wallace and J. J. Silverman.

Contains a report on the incidence of palpable dorsalis pedis and posterior tibial pulse in 500 soldiers convalescing from trench foot as compared with 906 controls. No significant difference was found. It is concluded that trench foot is essentially a disease of the smaller arterioles and capillaries and only rarely involves the larger arteries to the point of occlusion. **Copy seen:** DLC.

30201. KRAUSS, FERDINAND, 1848- Von der Ostsee bis zum Nordcap. Eine

Wanderung durch Dänemark, Norwegen und Schweden. Neutitschein, Wien und Leipzig, R. Hoesch, 1888. xii, 960, 344 illus. incl. text maps, tables, plates (2 col.), fold. col. map. **Title tr.:** From the Baltic Sea to Nordkap. A journey across Denmark, Norway, and Sweden.

Contains a traveler's account and impressions from several voyages to Scandinavia, with a special attention to the arts, cultural history and folklore. Among the places visited were Bodø, Tromsø, Nordkap, Hammerfest. A voyage on a tourist ship along the Norwegian coast from Drontheim to Nordkap is described (p. 727-854), with details on the Lofoten Islands, their climate, vegetation and fishing industry (p. 757-71); the collections of arctic flora, fauna and Lapp ethnography in Tromsø Museum (p. 774-75); the Norwegian whaling industry (p. 779-81). The Lapps, their appearance, occupation, reindeer and dogs, tents, the Lapp religion, shamanism, and folk tales are described (p. 781-839), mainly from literature, though the author visited a Lapp family near Tromsø and obtained some specimens of Lappish handicrafts (carvings). Weather conditions are described with some tabular data on air temperature, precipitation, and sun (p. 108-124). The possibility of cultivating barley as far north as Alten (70°N .), growing vegetables in Karasjok ($69^{\circ}18'\text{N}$.), and successful planting of potatoes in Mageröya ($71^{\circ}7'\text{N}$.) is stressed (p. 64-68). **Copy seen:** DLC.

30202. KRAVCHENKO, D. V. *Sovetskaiā Chukotka.* (Nauka i zhizn', Feb. 1952. t. 19, no. 2, p. 39-40, illus. (plate)) **Title tr.:** The Soviet Chukotka.

Popular sketch of the Chukotsk Peninsula: its geomorphology, climate, furbearers, inhabitants, reindeer husbandry and dog breeding; its poor economic conditions under Russian-American exploitation in the pre-revolutionary period, and its alleged prosperity and rise in well-being and culture under the Soviet rule are stressed. Several photos (on plate) illustrate various aspects of present-day life in Chukotka. **Copy seen:** DLC.

30203. KRENOV, JULIA. Legends from Alaska. (Société des Américanistes de Paris. Journal, 1951. nouv. sér. t. 40, p. 173-95)

Contains eleven Indian (?) legends and tales in English from the Kuskokwim River and Cook Inlet region, collected and transcribed by Mrs. J. Krénov, for several years a teacher in Alaska. Contacts with Russians and Eskimos are frequently mentioned in the narratives, and various ancient beliefs are implicit in them: the power of the shamans, spirits of the forest, the she-wolf, and land of the dead, etc. **Copy seen:** DLC.

30204. KRESTININ, VASILII VASIL'-EVICH, 1729-1795. Kratkāia istoriā o gorodě Arkhangel'skom. Sanktpeterburg, Imp. Akademiā nauk, 1792. viii, 264 p. **Title tr.:** Short history of the town of Arkhangel'sk.

An account of main events in Arkhangel'sk from its foundation in 1584 until 1780, based on unpublished materials. This account is presented in the form of questions and answers. It is supplemented (p. 91-264) by a chronology, roster of municipal officials (burgomasters, etc.) and texts of historical documents. The activities of Russian and foreign merchants and the importance to all Russia of the foreign trade of this northern port are emphasized; impediments due to maladministration on the part of the government and its agents are noted.

Copy seen: DLC.

30205. KRESTININ, VASILII VASIL'-EVICH, 1729-1795. Nachrichten über die Samoeden. (Journal von Russland, Bd. 1, no. 5, Nov. 1793, p. 291-304; no. 6, Dec. 1793, p. 371-94; no. 8, Feb. 1794, p. 83-93; no. 10, Apr. 1794, p. 245-56) **Title tr.:** News on the Samoyeds.

Translated from a series of papers originally published in Russian in the Academy of Sciences' monthly report entitled: *Novyiā ezhe-miesiāchnyiā sochineniū*, 1786-1792 (file in NN).

Contains an ethnological description based on the account of a Russian-speaking Samoyed, Jano Chudarov, a native from the Timan coast who was questioned by the author in Arkhangel'sk; supplemented from material reported by two investigators sent among the Samoyeds with a questionnaire prepared by the Russian Academy of Sciences. From these valuable sources,

a comprehensive account is given of the Samoyeds towards the end of the 18th century: their settlements in European Russia along the Mezen' and Pechora Rivers and the coast of Kanin and Timan Peninsulas; the landscape, rivers and lakes, climate and vegetation of their area; their numbers (1,349) and native administration; their origin and relationship with other peoples. Their physical characteristics are described, food and clothing, dwellings and economic life (details on reindeer breeding, fishing and hunting); trade with Russians; home industry and work of the women; religion and ethics (supreme deity Num, the numerous spirits Tadebziy, the idols Khae, the shaman Tadibei, and shamaness Sambolugu). Their psychological characteristics are sketched: their gentleness, laziness, inclination to alcohol and tobacco; their customs at childbirth, marriage and burial; taking an oath. Their popular therapy is noted: no plants or drugs are used, the shaman pretends to cut off, or into affected part of the patient's body and take the disease away. **Copy seen:** DLC (German translation); NN (Russian original).

30206. KRESTININ, VASILII VASIL'-EVICH, 1729-1795. Von der Insel Kolguev. (Journal von Russland, Jan. 1796. Jahrg. 3, Bd. 2, no. 7, p. 37-39) Extracted from the Russian historical calendar *Miesiāseslov* for 1787. **Title tr.:** From the Island of Kolguev.

Contains short notes on the geography, climate, flora and fauna of the island which is visited in summer by bird hunters from Mezen'.

Copy seen: DLC.

30207. KREUTZMANN, JOSEF. En fortælling om blodhaevn. (Grønlandske selskab. Årsskrift 1950. p. 145-47, illus.) **Title tr.:** A story of a blood-feud.

Contains a short Greenlandic tale of an Eskimo who waited a lifetime to kill his son's murderer, with a harpoon which he made for the purpose.

Copy seen: DLC.

30208. KREUTZMANN, JOSEF. De to venner, der ikke kunne undvære hinanden. (Grønlandske selskab. Årsskrift 1951. p. 132-36, illus.) **Title tr.:** The two friends who could not do without each other.

A Greenland Eskimo (Kangamiut) tale. **Copy seen:** DLC.

30209. KREYBERG, LEIV, 1896- . The development of acute tissue damage due to cold. Oslo, J. Dybwad, 1948. 23 p. 4 illus., 2 col. plates. (Norske videnskaps-akademi i Oslo. I. Mat.-naturv. klasse. Avhandlingar, 1948. no. 7)

Contains an analysis of tissue reactions to cold, specifically injuries immediately lethal to cells and those resulting from subsequent events. Includes sections on: initial and transient responses to cold; prolonged exposure to temperatures above freezing; damage caused by freezing of tissues to ice. Late and secondary complications are not considered. **Copy seen:** DSG.

30210. KREYBERG, LEIV, 1896- . Influence of sympathetomy on the necrosis developing in rabbits' ears after the skin has been frozen with solid carbon dioxide. (Archives of pathology, June 1948. v. 45, no. 6, p. 707-716, illus., diagr., tables)

Contains a preliminary report on experiments, with the right superior cervical sympathetic ganglion removed prior to freezing; the vascular reactions to freezing in the sympathetomized ear followed a different course from those of the opposite (control) ear, and developed edema quicker and to a larger extent; the final damage however seems to be equal in both ears. **Copy seen:** DLC.

30211. KREYBERG, LEIV, 1896- , and O. E. HANSSEN. Necrosis of whole mouse skin *in situ* and survival of transplanted epithelium after freezing to -78 C. and -190 C. (Scandinavian journal of clinical & laboratory investigation, 1950. v. 2, no. 2, p. 168-70, illus., table) 5 refs.

Contains an account of experiments on mice with ears frozen to very low temperatures. When left *in situ* the ears became necrotic, apparently due to stasis; auto-transplantation of frozen ears did not succeed. However, epidermis from the frozen ears was successfully auto-transplanted, the number of takes decreasing with the increase of the time interval between freezing and removal of the skin from the frozen area. **Copy seen:** DSG.

30212. KREYBERG, LEIV, 1896- . Trench-foot. (In: Inter-Allied Conferences on War Medicine, London, 1942-1945, pub. 1947. p. 139-40)

Contains information on diagnosis and pathology of trench foot, viz. skin color; stasis, its causes, degrees and sequences; increased vascular permeability and edema; effects of rewarming; causes of necrosis. **Copy seen:** DLC.

KREYBERG, LEIV, 1896- , see also Hanssen, O. E., and L. Kreyberg. Effect of ice water upon development of skin lesions. 1951. No. 29547.
